Appendix E Soil Analytical Results from SVE Wells and VMPs (installed in 2011) **continued**

On behalf of Shell Oil Products US (SOPUS), URS Corporation (URS) is providing this report documenting installation activities during 4th Quarter 2012 (4Q12) for groundwater monitoring wells and vapor monitoring points (VMPs) in the Village of Roxana, Illinois (Village), WRB Refining, LP Wood River Refinery (WRR), and on Illinois Department of Transportation (IDOT) right-of-way. The installation of new groundwater monitoring wells was required by Conditions 2.a. and 2.b in the Illinois Environmental Protection Agency (IEPA) letter dated March 14, 2012 (IEPA, 2012a). The installation of new VMPs was required by Condition 10 in the IEPA letter dated September 13, 2012 (IEPA, 2012b).

SOPUS has been conducting a subsurface investigation in the Village in the area generally bounded by Illinois Route 111 (west), the west property boundary (a/k/a west fenceline) of the WRR (east), the alley north of First Street (north), and Roxana Public Works Yard (south) (**Figure 1**). For purposes of presentation in this report, the combined area is collectively referred as the "Investigation Area". Activities presented herein, including soil sampling, monitoring well installation and development, and VMP installation and development. Locations of the new groundwater monitoring wells and VMPs are shown on **Figure 2**.

These investigation activities were performed in general accordance with previously approved investigation procedures[1] and the IEPA conditions requiring the work. IEPA personnel visited the site multiple times during this scope of work to observe the field activities. No comments or exceptions were made by the IEPA personnel as to the field methodologies or the data being collected.

## 2.1 PRE-FIELD ACTIVITIES AND BOREHOLE CLEARANCE

Field activities for this investigation were conducted on the Village streets, alleys and rights-of-way; on the North Property of the WRR; and on IDOT right-of-way. The work in the Village was performed according to an access agreement between SOPUS and the Village, signed October 5, 2012. URS, on behalf of SOPUS, submitted a notification of planned work to the Village on November 9, 2012. The work on IDOT property was performed under an IDOT permit issued October 15, 2012.

Prior to the start of work, monitoring well locations were marked in the field with spray paint. A utility locate was arranged using Illinois' Joint Utility Locating Information for Excavators (JULIE) service. While JULIE facilitated identification of public utility lines, Roberts Environmental Drilling, Inc. (REDI) of Millstadt, Illinois was contracted to perform private utility locating services using ground penetrating radar (GPR) at each location.

Borehole clearance via an air-vacuum system (air-knife) was used to clear each location with respect to underground utility lines or other obstructions. Locations were cleared to a depth of approximately 10 feet below ground surface (bgs).

Subsurface material observations were made during borehole clearance activities by advancing a hand auger prior to air-knifing to collect grab samples and classify the soil. These observations were noted on the soil boring logs.

## 2.2 DRILLING AND SOIL SAMPLING

Drilling activities were performed by REDI with an 8040DT Geoprobe® rig at a total of sixteen locations (MW-16 through MW-22 and VMP-47 through VMP-54) in the Village, one replacement location (P-55R) along the western fenceline on the North Property of the WRR, and one location (VMP-55) on IDOT right-of-way (**Figure 1**).

[1] Investigation procedures previously approved by the IEPA can be found in the *Dissolved Phase Groundwater Investigation and P-60 Free Phase Product Delineation Report* dated February 2010, as well as subsequent correspondence and submittals.

A soil boring was advanced at each groundwater monitoring well and VMP location to log lithology and collect representative soil samples for analytical testing. Soil sampling was conducted via direct push, using a dual-tube sampling system. At the locations in the Village, the dual-tube system consisted of 3.5-inch diameter outer casing rods and a 5-foot long by 1.85-inch diameter clear acetate liner attached to 1-inch diameter inner rods. At the location within WRR, the dual-tube system consisted of 4.5-inch diameter outer casing rods and a 5-foot long by 3-inch diameter clear acetate liner attached to 1-inch diameter inner rods. The acetate liner and inner rods were advanced simultaneously with the outer casing. Once a sample was collected within the acetate liner, the inner rods and acetate liner were retrieved while the outer casing remained in place. The acetate liner was replaced and inner rods returned to the sampling depth, at which point the process was repeated. The soil borings were advanced to depths ranging between 30 and 50 feet bgs.

Subsurface stratigraphy was logged in accordance with applicable ASTM standards, Unified Soil Classification System (USCS) protocols and URS procedures. Noted soil attributes included color, particle size, consistency, moisture content, structure, plasticity, odor and organic content (if visible). Soil samples from each boring were visually evaluated for evidence of impact and screened in the field using a photoionization detector (PID) at 2-foot intervals. At the completion of each soil boring, monitoring wells or VMPs were installed within the boreholes. Soil boring logs are included in **Appendix A**.

IEPA's March 14, 2012 letter requested a shallow monitoring well adjacent to MW-16 to monitor a possible perched zone. There was no evidence of a perched zone at this location so a shallow well was not installed.

**Soil Samples**

Subsurface conditions consist primarily of a sand unit with occasional, intermittent silt and clay layers overlain by silty sand and fill/clay. Multiple soil samples were collected from each soil boring and submitted for laboratory analysis. A shallow sample was collected toward the top of the sand unit, and a deep sample was collected at the top of the expected groundwater monitoring well screen interval. In addition, a sample was collected between the shallow and deep samples from the interval exhibiting the highest PID readings. Refer to **Section 2.4** for sample handling and laboratory testing.

## 2.3 MONITORING WELL AND VMP INSTALLATION AND DEVELOPMENT

A total of seven groundwater monitoring wells and eight VMPs were installed in the Village, one replacement groundwater monitoring well was installed on the North Property of the WRR, and one VMP on IDOT right-of-way (**Figure 2**).

**Groundwater Monitoring Well Installation**

Upon completion of soil sample collection, groundwater monitoring wells were installed using 4.25-inch ID hollow stem augers, with the exception of Well P-55R. The eight groundwater monitoring wells were constructed using a 2-inch diameter Schedule 40 PVC casing, with 0.010-inch slotted PVC well screen. The groundwater monitoring well screens were set at similar depths, such that a portion of the screen extended above the water table observed at the time of drilling. The sand pack consisted of a combination of placed and/or native sand in the annular space, and extended to approximately 2 feet above the top of the monitoring well screen. A minimum 3-foot thick bentonite seal was placed above the sand pack. The borehole annulus was then grouted to the surface with cement-bentonite grout. Surface completions, including a locking expandable cap and flush-mount protector, were added. **Table 1** contains a summary of the groundwater monitoring well completion information. Construction diagrams for the groundwater monitoring wells installed are provided in **Appendix B**.

**Groundwaer Monitoring Well Development**

Once the groundwater monitoring well installations were complete, the wells were developed in order to remove fines from the screen and sand pack. The groundwater monitoring wells were developed by surging and pumping throughout the screened zone with a high-flow submersible pump. Five times the volume of water introduced during drilling of the lower approximately 25 feet of the boring was removed. In addition, five well volumes of water were also removed and until the water was visually sediment-free. Groundwater monitoring well development sheets containing data pertinent to water quality parameters and volume of water purged are provided in **Appendix C**.

**VMP Installation**

Upon completion of soil sample collection, VMPs were installed through the dual-tube casing. The nine VMPs were constructed using continuous 0.125-inch outside diameter (OD) diameter stainless-steel tubing connected with a 0.5-foot long stainless steel 0.375-inch OD port screen. The port screens were set with the top of the screens at 5-foot, 10-foot, 20-foot, and 30-foot bgs. The sand pack consisted of a combination of placed and/or native sand in the annular space, and extended to approximately 0.5-foot above and below the port screen. A bentonite chip seal was

placed above each sand pack, between each port screen. Surface completions, including a Swagelok® reducer to bring the connection size up to 0.25-inch diameter with closable valves and flush-mount protector, were added. **Table 2** contains a summary of the VMP completion information. Construction diagrams for the VMPs installed are provided in **Appendix B**.

**VMP Development**

Once the VMP installations were complete, the VMPs were developed in order to remove ambient air from the sand pack in the newly installed ports prior to sampling. Development was completed at all ports at VMP-47 through VMP-54. Only one port at VMP-55, VMP-55-20 was able to be developed. The remaining three ports were found to be submerged during two separate attempts at development. **Table 3** contains a summary of the VMP development information.

## 2.4 SAMPLE HANDLING AND LABORATORY TESTING

Soil samples were collected in laboratory-supplied containers, labeled in the field and information was recorded on the chains of custody (COC) forms at the time of collection. The COCs can be found with the analytical reports in **Appendix D**.

Upon collection and labeling, sample containers were immediately placed inside an iced cooler, packed in such a way as to help prevent breakage and maintain inside temperature at or below 4°C. The samples were then delivered via overnight courier, under the proper COC documentation, to the laboratory for analysis.

A total of 63 soil samples (50 investigative samples, 7 field duplicate pairs, 3 matrix spike/matrix spike duplicate (MS/MSD) sets), and 10 aqueous trip blank sets) were prepared and sent to Accutest Laboratories in Marlborough, MA. Samples were analyzed for volatile organic compounds (VOCs) by USEPA SW846 Methods 8260B and 8011.

## 2.5 HEALTH & SAFETY, DECONTAMINATION, AND IDW

**Health & Safety**

Groundwater monitoring well and VMP installation field activities were governed by the Well Installation/Soil Boring Roxana Investigation and Remediation Health and Safety Plan (HASP) dated November 12, 2012 (URS, 2012), as prepared by URS.

Prior to beginning site work and at the start of work each day, a daily safety meeting was held. The purpose of this meeting was to discuss the day's planned activities and to address any potential health and safety concerns. As a part of the daily safety meeting, job safety analyses (JSAs) were reviewed to address task specific safety concerns.

URS field personnel wore U.S. Environmental Protection Agency (USEPA) modified Level D personal protective equipment (PPE), which included hard hat, steel-toed boots, safety glasses, etc. In addition, work within the WRR was performed wearing flame retardant clothing (FRCs) per WRR requirements (in areas where required). During installation of well MW-22, PPE was upgraded to Level C due to borehole organic vapors in the breathing zone.

A photoionization detector (PID) with a 10.6 electron volt (eV) lamp, combustible gas indicator (CGI), and individual hydrogen sulfide gas detectors (for locations inside WRR) were used during the field activities to monitor air quality. A benzene gas monitor with a 9.8 eV lamp was available during field activities to monitor benzene levels, if necessary. Field instruments were calibrated prior to use each day in accordance with the manufacturer's specifications.

**Decontamination**

Field personnel and equipment underwent decontamination procedures to ensure the health and safety of those present, to maintain sample integrity, and to minimize cross contamination between sampling locations. Drilling equipment was decontaminated prior to its use at subsequent sampling locations with a high pressure hot water wash at a temporary decontamination pad at the Roxana Public Works Yard.

**Investigation Derived Waste**

Investigation Derived Waste (IDW), including soil cuttings, water generated during decontamination, PPE, and expendable materials were collected and disposed of properly.

- Expendable materials (e.g., disposable sampling equipment such as gloves and bailers) having a low probability of impact were collected in trash bags and disposed of as municipal waste.
- Soil cuttings from locations, except MW-22, were collected and placed directly in labeled and secured roll-offs for disposal at the Waste Management, Inc. Milam Recycling and Disposal Facility in Fairmont City, Illinois. Soil cuttings from MW-22 were placed in 55-gallon drums and were disposed by Veolia in Sauget, Illinois.
- Decontamination fluids and development water were collected and staged at the Village of Roxana Public Works yard in 55-gallon drums and disposed at the Heritage Environmental Services, LLC facility in Indianapolis, Indiana.

## 3.1 DATA QUALITY REVIEW AND DATA MANAGEMENT

Analytical data from groundwater monitoring well and VMP installation sampling activities were independently reviewed by URS.

URS conducted an independent Level III review of the analytical data following procedures outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (USEPA, 2008). Qualifiers were assigned to data when results from the review were outside control limits. These qualifiers are included in the data tables (**Table 3**) and were manually transcribed on the laboratory result pages (included in **Appendix D**).

Based on laboratory control/laboratory control duplicate (LCS/LCSD), matrix spike/matrix spike duplicate (MS/MSD), surrogate, holding time, and field duplicate criteria, the soil results reported were accepted for their intended use with the exception of the results for Method 8011 analytes, 1,2-Dibromo-3-chloropropane and 1,2-Dibromoethane in samples VMP-52-13 and VMP-52-25, that were rejected due to analyses completed outside of holding time criteria.

URS data reviews are included with the analytical data reports in **Appendix D**.

URS personnel kept a bound field notebook and sampling forms while performing sampling and oversight activities on-site. The following documentation was completed and supplements the COC records:

- Personnel conducting site activities, arrival and departure times
- Location where the work was performed
- Date, time, weather conditions, equipment, observations, etc.
- Safety documentation

Equipment calibrations, repairs and adjustments were documented daily on a calibration log sheet. Air monitoring was performed various times during sampling, with results recorded on a daily air monitoring log sheet. Organic vapor headspace readings were included on boring logs and COC forms.

Field data and documentation collected as part of this scope of work became part of the project file and the database management system, both maintained by URS.

## 3.2 SOIL SAMPLING RESULTS

A tabular summary of the analytical detections for the soil samples collected during groundwater monitoring well and VMP installations is presented in **Table 1.**

**Appendix E** contains tabular results and laboratory reports for analytical data from SVE well and VMP installations performed in 2011. These data had not previously been reported.

As required by the IEPA letter dated March 14, 2012, URS installed groundwater monitoring wells in the Village on behalf of SOPUS.

In accordance with Condition 2a, the following groundwater monitoring wells were installed along Chafer Street:

- No additional groundwater monitoring well was installed at ROST-4-PZ(F) as the well in place is already a 2-inch well;
- MW-17 was installed west of Well T-12;
- MW-18 was installed east of VMP-4;
- MW-19 was installed west of WRR well P-59;
- MW-20 was installed west of WRR well P-56; and
- MW-21 was installed west of WRR well P-57.

In accordance with Condition 2b, the following wells were installed in the Village:

- MW-16 was installed at the mid-point between the end of the block and ROST-21-PZ in the upper aquifer;
- No perched well was installed at MW-16 because there was no evidence of perched water at the time of well installation;
- MW-22 was installed adjacent to ROST-7-PZ at a depth greater than the zone monitored by ROST-7-PZ.

As required by the IEPA letter dated September 13, 2012, URS installed VMPs in the Village of Roxana on behalf of SOPUS.

- VMP-47 through VMP-55 were installed in accordance with the locations and depths listed in Condition 10.

Groundwater monitoring wells and VMPs presented in this report will be integrated into their respective monitoring programs.

1) The sand pack volume shown on this table is the volume of the entire sand pack, not just the pore space volume within the sand pack.
2) The target development purge volume is equal to 3 times the combined volume of the port tubing, sand pack, and sample train.
3) The target sampling purge volume is equal to 3 times the combined volume of the port tubing and sample train.
4) Three depths at VMP-55 were determined to be submerged at the time of development and sampling.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries and RPDs were outside evaluation criteria. Method 8011 VOC surrogate recovery for bromofluorobenzene was outside evaluation criteria in sample MW-18-18. VOC MS/MSD recoveries and MS/MSD RPDs were outside of evaluation criteria in sample MW-18-12. Internal standard area recoveries for certain quality control samples were outside evaluation criteria. The initial calibration verification recovery for acrolein, vinyl acetate, acetone, and 2-hexanone exceeded 50 percent difference (%D). Professional judgment was used to qualify the common lab contaminant methylene chloride in samples MW-17-21, MW-17-14, and MW-18-12. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 0.6°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required. Additionally, the laboratory issued a letter indicating that VOC trip blanks were received headspace free, and that the cooler receipt form had been incorrectly marked as not applicable with regards to trip blanks and VOC headspace.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

MS/MSD RPDs alone were outside criteria for 3 out of 62 reported analytes in sample MW-18-12. MS/MSD RPDs outside evaluation criteria are not individually listed for analytes with MS/MSD recoveries within evaluation criteria. USEPA National Functional Guidelines for Organic Data Review indicates that organic data does not require qualification based on MS/MSD data alone and LCS recoveries were within evaluation criteria with the exception of compounds listed and qualified as appropriate in Section 5.0 of this data review. No further qualification of the data was required.

Additionally, samples MW-17-35, MW-18-18, and MW-18-39 were associated with the initial calibration verification recovery for acetone, acrolein, vinyl acetate, and 2-hexanone that exceeded 50 percent difference (%D). Samples MW-17-21, and MW-17-

14 were associated with initial calibration verification recovery for acetone that exceeded 50 percent difference (%D). Acetone and acrolein were previously qualified due to LCS/LCSD data in Section 5.0 of this review in several samples. Accutest Job: MC16336

Ms. Elizabeth Kunkel,

On the report for SDG MC16336, the sample receipt confirmation was marked incorrectly by the lab. The SDG did have a trip blank that was received in the cooler, the trip blank was marked on the COC, and the vials that were sent for VOC analysis were received headspace free.

Sincerely,

Jeremy M. Vienneau

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. Due to standard degradation, acrolein was not spiked in the initial calibration verification or LCS. Initial calibration recovery for acetone exceeds 50 percent difference (%D). These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 0.3°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required. Additionally, the laboratory issued a letter indicating that VOC trip blanks were received headspace free, and that the cooler receipt form had been incorrectly marked as not applicable with regards to trip blanks and VOC headspace.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Professional judgment was used to not reject acrolein in samples associated with LCS/LCSD MSK2153-BS/BSD due to acrolein not being spiked due to standard degradation. LCS MSH1953-BS was associated with the trip blank. Trip blanks are quality control samples and are not qualified.

Accutest Job: MC16445

Ms. Elizabeth Kunkel,

On the report for SDG MC16445, the sample receipt confirmation was marked incorrectly by the lab. The SDG did have a trip blank that was received in the cooler, the trip blank was marked on the COC, and the vials that were sent for VOC analysis were received headspace free.

Sincerely,

Jeremy M. Vienneau

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. Initial calibration verification recovery for acetone, 2-hexanone, and vinyl acetate exceeded 50% difference (%D). These issues are addressed further in the appropriate sections below. Continuing calibration verification recoveries for acrolein and 2-chloroethyl vinyl ether exceeded 50% difference (%D). Calibration verification recoveries exceeding 50% D were associated with the trip blank; trip blanks are quality control samples and are not qualified.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| MW-16-37 | TRIP BLANK |
| MW-20-11 | MW-20-21 |
| MW-20-41 | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS recoveries were outside evaluation criteria. VOC surrogate recovery for dibromofluoromethane was outside evaluation criteria in method blank MSG4879-MB. VOC MS/MSD recoveries were outside of evaluation criteria for sample MW-20-11. The initial calibration verification recovery for acrolein and vinyl acetate exceeded 50 percent difference (%D). The continuing calibration verification recovery for acrolein and 2-chloroethyl vinyl ether exceeded 50 percent difference (%D). These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 0.6°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required. The methanol labeled vial for sample MW-16-37 was received by the laboratory without the methanol preservative. The unpreserved vial contained sufficient sample volume to complete the requested analysis. Additionally, the laboratory issued a letter indicating that VOC trip blanks were received headspace free, and that the cooler receipt form had been incorrectly marked as not applicable with regards to trip blanks and VOC headspace.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. LCS MSN2676-BS was associated with the trip blank. Trip blanks are quality control samples and are not qualified.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW-16-14 | VOCs | Acrolein | **UJ** |

No

| Sample ID | Parameter | Surrogate | Recovery | Criteria |
|---|---|---|---|---|
| MSG4879-MB | VOCs | Dibromofluoromethane | **133** | 70-130 |

Method blank MSG4879-MB is a quality control sample and is not qualified. No qualification of data was required.

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

Yes, although not requested, sample MW-20-11 was spiked and analyzed for VOCs.

*Were MS/MSD recoveries within evaluation criteria?*

No

| MS/MSD ID | Parameter | Analyte | MS/MSD Recovery | RPD | MS/MSD/ RPD Criteria |
|---|---|---|---|---|---|
| MW-20-11 | VOCs | Acrolein | **32/34** | 6 | 70-130/30 |

| MW-20-11 | VOCs | 4-Methyl-2-pentanone (MIBK) | **68/68** | 0 | 70-130/30 |

USEPA National Functional Guidelines for Organic Data Review indicates that organic data does not require qualification based on MS/MSD data alone and LCS recoveries were within evaluation criteria with the exception of compounds listed and qualified as appropriate in Section 5.0 of this data review. No further qualification of the data was required.

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

Yes

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 10.0 Field Duplicate Results

No

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, samples MW-16-14, MW-16-27, and MW-16-37 were associated with the initial calibration verification recovery for acrolein and vinyl acetate that exceeded 50 percent difference (%D). Samples MW-20-11, MW-20-21 and MW-20-41 were associated with continuing calibration verification recovery for acrolein and 2-chloroethyl vinyl ether that exceeded 50 percent difference (%D). Acrolein was previously qualified due to LCS/LCSD data in Section 5.0 of this review. Analytes in samples associated with ICV and CCV %D greater than 50% were qualified as summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. VOC MS/MSD recoveries were outside of evaluation criteria for sample MW-21-31. The initial calibration verification recovery for acrolein and acetone exceeded 50 percent difference (%D). The continuing calibration verification recovery for acrolein exceeded 50 percent difference (%D). These issues are addressed further in the appropriate sections below.

The cooler receipt form did not indicate any problems.

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Professional judgment was used to not reject acrolein in samples associated with LCS/LCSD MSK2161-BS/BSD due to acrolein not being spiked due to standard degradation. Please refer to Section 12.0 of this review for additional qualifications regarding samples associated with the MSK2161-BS/BSD LCS/LCSD. LCS MSG4888-BS was associated with the trip blank quality control sample and is not qualified.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. VOC by 8011 surrogate recovery for bromofluorobenzene was outside evaluation criteria in samples and quality control samples. The internal standard area recovery for tert butyl alcohol-$d_9$ in the VOC method blank was outside criteria. Although not indicated in the laboratory case narrative, methylene chloride was detected in the method blank. The initial calibration verification recovery for acrolein, acetone, 2-butanone, and 2-hexanone exceeded 50 percent difference (%D). The continuing calibration verification recovery for acrolein exceeded 50 percent difference (%D). These issues are addressed further in the appropriate sections below.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration |
|---|---|---|---|
| MSM1817-MB | VOCs | Methylene chloride | 2.1 ug/L |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration (10X for common laboratory contaminants) did not require qualification. No qualification of data was required.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/ LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD/ RPD Criteria |
|---|---|---|---|---|---|
| MSM1817-BS | VOCs | Chloromethane | **138** | NA | 70-130 |
| MSM1817-BS | VOCs | Dichlorodifluoromethane | **155** | NA | 70-130 |
| MSG4911-BS/BSD | VOCs | Acetone | **140**/124 | 12 | 70-130/25 |
| MSG4911-BS/BSD | VOCs | Acrolein | **64/68** | 6 | 70-130/25 |
| MSK2185-BS/BSD | VOCs | n-Butylbenzene | 128/**133** | 3 | 70-130/25 |
| MSK2185-BS/BSD | VOCs | 2-Chloroethyl vinyl ether | **39/39** | 1 | 70-130/25 |

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. LCS/LCSD MSK2185-BS/BSD was associated with the trip blank. Trip blanks are quality control samples and are not qualified.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| P-55R-43 | VOCs | Acrolein | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery | Criteria |
|---|---|---|---|---|
| P-55R-43 | VOCs by 8011 | Bromofluorobenzene (S) | **298** | 61-167 |
| P-55R-51 | VOCs by 8011 | Bromofluorobenzene (S) | **625** | 61-167 |
| OP31778-MB | VOCs by 8011 | Bromofluorobenzene (S) | **593** | 61-167 |
| OP31778-BS | VOCs by 8011 | Bromofluorobenzene (S) | **542** | 61-167 |
| OP31778-MS/MSD | VOCs by 8011 | Bromofluorobenzene (S) | **479/497** | 61-167 |

Analytical data reported as non-detect and associated with surrogate recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Method blank, LCS, and MS/MSD OP31778 are quality control samples, and are not qualified. No qualification of data was required.

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

Yes, although not requested, sample P-55R-51 was spiked and analyzed for VOCs by 8011.

*Were MS/MSD recoveries within evaluation criteria?*

Yes

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Analyte | IS Area Recovery | IS Criteria |
|---|---|---|---|---|
| MSM1817-MB | VOCs | Tert butyl alcohol-$d_9$ | **166786** | 169419-677674 |

Method blank MSM1817-MB is a quality control sample and is not qualified. No qualification of data was required.

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, sample P-55R-43 was associated with the initial calibration verification recovery for acetone, acrolein, vinyl acetate, 2-hexanone, and 2-butanone that exceeded 50 percent difference (%D). The trip blank was associated with the continuing calibration verification recovery for acrolein that exceeded 50 percent difference (%D). Trip blanks are quality control samples and are not qualified. Acrolein was previously qualified due to LCS/LCSD data in Section 5.0 of this review in sample P-55R-43. Analytes in samples associated with ICV %D greater than 50% were qualified as summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| P-55R-43 | VOCs | Acetone | **UJ** |
| P-55R-43 | VOCs | 2-Butnanone | **UJ** |
| P-55R-43 | VOCs | 2-Hexanone | **UJ** |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS recoveries were outside evaluation criteria. VOC by 8011 surrogate recovery for bromofluorobenzene was outside evaluation criteria in sample VMP-50-21. The initial calibration verification recovery for acetone exceeded 50 percent difference (%D). The continuing calibration verification recovery for 2-chloroethyl vinyl ether and acrolein exceeded 50 percent difference (%D). Acrolein was not spiked in the initial calibration verification or LCS due to standard degradation. Professional judgment was used to qualify the common lab contaminant methylene chloride in several samples. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.5°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Professional judgment was used to not reject acrolein in samples associated with LCS MSK2162-BS due to acrolein not being spiked due to standard degradation. LCS MSH1961-BS was associated with the trip blank. Trip blanks are quality control samples and are not qualified.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. Surrogate recovery for bromofluorobenzene was outside evaluation criteria in the initial analyses of VOC 8011 samples, VMP-52-13 and VMP-52-25. VOC MS/MSD recoveries and MS/MSD RPDs were outside of evaluation criteria in samples VMP-49-11 and VMP-53-15. Internal standard area recoveries in sample VMP-49-11 were outside criteria. The continuing calibration verification recovery for acrolein exceeded 50 percent difference (%D). Although not indicated in the laboratory case narrative, samples VMP-52-13 and VMP-52-25 were re-analyzed outside holding time criteria for VOCs by 8011. Professional judgment was used to qualify the common lab contaminants methylene chloride and acetone in several samples. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.3°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, VOC by 8011 analytes were re-analyzed one (1) day outside the fourteen (14) day holding time criteria for analysis in samples VMP-52-13 and VMP-52-25. Analytical data that required qualification based on analysis completed outside the holding time criteria are summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-52-13-Run#2 | VOCs by 8011 | 1,2-Dibromo-3-chloropropane | **R** |
| VMP-52-13-Run#2 | VOCs by 8011 | 1,2-Dibromoethane | **R** |
| VMP-52-25-Run#2 | VOCs by 8011 | 1,2-Dibromo-3-chloropropane | **R** |
| VMP-52-25-Run#2 | VOCs by 8011 | 1,2-Dibromoethane | **R** |

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/ LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD/ RPD Criteria |
|---|---|---|---|---|---|
| MSM1801-BS | VOCs | Acrolein | **47** | NA | 70-130 |

| MSM1804-BS/BSD | VOCs | Acrolein | **56/46** | 20 | 70-130/25 |

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Professional judgment was used to not reject acrolein in samples associated with LCS MSK2162-BS due to acrolein not being spiked. LCS MSN2685-BS was associated with the trip blank. Trip blanks are quality control samples and are not qualified.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. VOC MS/MSD recoveries were outside of evaluation criteria in sample VMP-54-15. The internal standard area recovery for tert butyl alcohol-$d_9$ in LCS MSM1804-BS was outside criteria. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. Professional judgment was used to qualify the common lab contaminant methylene chloride in several samples. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.9°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| MSV597-MB | VOCs | Tetrachloroethene | 5.6 ug/L |
| MSV597-MB | VOCs | 1,2,3-Trichlorobenzene | 4.5 ug/L |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of

data was required.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

Yes, although not requested, sample VMP-54-15 was spiked and analyzed for VOCs.

*Were MS/MSD recoveries within evaluation criteria?*

No

| MS/MSD ID | Parameter | Analyte | MS/MSD Recovery | RPD | MS/MSD/ RPD Criteria |
|---|---|---|---|---|---|
| VMP-54-15 | VOCs | Acrolein | **46/46** | 4 | 70-130/30 |
| VMP-54-15 | VOCs | Dichlorodifluoromethane | **66/69** | 8 | 70-130/30 |

USEPA National Functional Guidelines for Organic Data Review indicates that organic data does not require qualification based on MS/MSD data alone and LCS recoveries were within evaluation criteria with the exception of compounds listed and qualified as appropriate in Section 5.0 of this data review. No further qualification of the data was required.

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Analyte | IS Area Recovery | IS Criteria |
|---|---|---|---|---|
| MSM1804-BS | VOCs | Tert butyl alcohol-$d_9$ | **86522** | 20994-83974 |

LCS MSM1804-BS is a quality control sample and is not qualified. No qualification of data was required.

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-54-15 | VMP-54-15-Dup |

*Were field duplicates within evaluation criteria?*

Yes

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was used to qualify the common laboratory contaminant methylene chloride reported at concentrations less than two times (2X) the reporting limit (RL).

# Roxana Drilling 2013 Data Review

**Laboratory SDG: MC16961**

**Data Reviewer: Melissa Mansker**

**Peer Reviewer: Elizabeth Kunkel**

**Date Reviewed: 3/5/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| VMP-55-13 | VMP-55-25 |
| VMP-55-31 | VMP-55-31-Dup |
| TRIP BLANK | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

No, the trip blank listed on the COC was inadvertently not included in the cooler; and therefore was not analyzed. No qualification of data was required due to trip blank contamination in other SDGs in this sampling program.

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. The internal standard area recovery for tert buyl alcohol-$d_9$ for sample VMP-55-13 and LCS MSM1806-BS was outside criteria. Benzene and methyl tert buty ether were qualified due to field duplicate RPD outside evaluation criteria in field duplicate pair VMP-55-31/VMP-55-31-Dup. Professional judgment was used to qualify the common lab contaminant acetone in sample VMP-55-31. These issues are addressed further in the appropriate sections below.

The cooler receipt form did not indicate any problems. Please see Section 1.0 of this review for further cooler receipt information.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/ LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD/ RPD Criteria |
|---|---|---|---|---|---|
| MSM1806-BS | VOCs | Acetone | **64** | NA | 70-130 |
| MSM1806-BS | VOCs | Chloromethane | **132** | NA | 70-130 |
| MSM1806-BS | VOCs | Dichlorodifluoromethane | **160** | NA | 70-130 |

| MSM1807-BS/BSD | VOCs | Trichlorofluoromethane | 117/**132** | 12 | 70-130/25 |

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-55-13 | VOCs | Acetone | **UJ** |
| VMP-55-25 | VOCs | Acetone | **UJ** |
| VMP-55-31-Dup | VOCs | Acetone | **UJ** |
| VMP-55-31 | VOCs | Acetone | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

Yes, although not requested, sample VMP-55-25 was spiked and analyzed for VOCs by 8011.

*Were MS/MSD recoveries within evaluation criteria?*

Yes

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Analyte | IS Area Recovery | IS Criteria |
|---|---|---|---|---|
| MSM1806-BS | VOCs | Tert butyl alcohol-$d_9$ | **81702** | 19719-78874 |
| VMP-55-13 | VOCs | Tert butyl alcohol-$d_9$ | **81175** | 19719-78874 |

Analytical data that required qualification based on internal standard data are included in the following table. Analytical data reported as non-detect and associated with internal standard area recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. LCS MSM1806-BS is a quality control sample and is not

qualified.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-55-13 | VOCs | Methyl tert butyl ether | **J** |

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-55-31 | VMP-55-31-Dup |

*Were field duplicates within evaluation criteria?*

No

| Field ID | Field Duplicate ID | Parameter | Analyte | RPD | Qualification |

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was also used to qualify the common laboratory contaminant acetone reported at concentrations more than two times (2X) the reporting limit (RL).
