| SVE-7 (12.5-15) 092111 | TB-092111 |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes, however sample duplicate pair SVE-7 (12.5-15) 092111/SVE-7 (12.5-15) 092111 Dup were separated into SDGs MC3836 and MC3835, respectively. The sample duplicate pair was compared.

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS recoveries were outside evaluation criteria. Surrogate recoveries for the initial run for sample SVE-8 (15-17.5) were outside evaluation criteria. VOC MS/MSD recoveries and TPH-ORO MS/MSD RPD recoveries were outside evaluation criteria. Internal standard area recoveries for the initial run results for sample SVE-8 (15-17.5)-092111 were outside criteria. Xylene (total) was qualified due to field duplicate RPD outside evaluation criteria in field duplicate pair, SVE-7 (12.5-15) 092111/SVE-7 (12.5-15) 092111 Dup. Professional judgment was used to qualify acetone in These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.4° C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; therefore, no qualification of data was required.

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

USEPA National Functional Guidelines for Organic Data Review indicates that organic data does not require qualification based on MS/MSD data alone and LCS recoveries were within evaluation criteria with the exception of compounds listed and qualified as appropriate in Section 5.0 of this data review. No further qualification of the data was required.

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

No

| SVE-8 (15-17.5) 092111 | VOCs | Chlorobenzene-$d_5$ | **1376278** | 158637-634548 |

The initial run results for sample SVE-8 (15-17.5)-092111 were outside criteria; however lab data used the second confirmation run results, which were inside criteria. Therefore no qualification of the data was required.

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was used to qualify the common laboratory contaminant acetone reported at concentrations greater than two times (2X) the reporting limit (RL), since acetone is not representative of site conditions. Additionally, USEPA Method 5035A states that acidification of certain soils with sodium bisulfate may produce a false positive acetone artifact of 100-200 ppb, or more. Acetone reported at concentrations less than 200 ppb (ug/kg) were qualified.

|---|---|---|---|---|
| SVE-7 (12.5-15) 092111 | Acetone | 30.6 ug/kg | **U** | Professional Judgment |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

No, trip blank TB-092211 listed on the COC was not received by the laboratory, and was therefore not analyzed for VOCs and TPH-GRO/DRO/ORO.

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS recoveries were outside evaluation criteria. VOCs and TPH-GRO were qualified due to field duplicate RPD outside evaluation criteria in the field duplicate pair, SVE-7 (12.5-15) 092111/SVE-7 (12.5-15) 092111 Dup. Professional judgment was used to qualify acetone in samples SVE-20 (25-27.5) 092211 and SVE-33 (27.5-30) 092211. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 0.8°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; therefore, no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was used to qualify the common laboratory contaminant acetone reported at concentrations less than two times (2X) the reporting limit (RL), since acetone is not representative of site conditions. Additionally, USEPA Method 5035A states that acidification of certain soils with sodium bisulfate may produce a false positive acetone artifact of 100-200 ppb, or more. Acetone reported at concentrations less than 200 ppb (ug/kg) were qualified.

# SVE Install 2011 Data Review

**Laboratory SDG: MC3921**

**Data Reviewer: Melissa Mansker**

**Peer Reviewer: Elizabeth Kunkel**

**Date Reviewed: 1/12/2012**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |

| SVE-34 (44-45) 092311 EB | TB-092311 |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes; however, the filed duplicate pair of VMP-46 (10-11) 092311/VMP-46 (10-11) 092311 Dup was separated into two SDGs, SDGs MC3921 and SDG MC3922.

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. Surrogate recoveries for sample VMP-46 (10-11) 092311 and surrogate recoveries for two quality control samples were outside evaluation criteria. VOC MS/MSD recoveries and TPH-ORO MS/MSD RPDs were outside of evaluation criteria in sample VMP-46 (10-11) 092311. Internal standard area recoveries in the initial analysis of sample VMP-46 (10-11) 092311 were outside evaluation criteria. Professional judgment was used to qualify acetone in sample VMP-46 (10-11) 092311. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.9°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

USEPA National Functional Guidelines for Organic Data Review indicates that organic data does not require qualification based on MS/MSD data alone and LCS recoveries were within evaluation criteria with the exception of compounds listed and qualified as appropriate in Section 5.0 of this data review. No further qualification of the data was required.

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Analyte | IS Area Recovery | IS Criteria |
|---|---|---|---|---|
| VMP-46 (10-11) 092311 | VOCs | 1,4-Dichlorobenzene-$d_5$ | **29064** | 29264-117056 |

The initial run results for sample VMP-46 (10-11) 092311 were outside criteria; however lab data used the second confirmation run results, which were inside criteria. Therefore no qualification of the data was required.

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes, the parent sample of field duplicate pair VMP-46 (10-11) 092311 was collected as part of this SDG. The duplicate sample was collected as part of SDG MC3922; please see section 10.0 of SDG MC3922 for further discussion.

*Were field duplicate RPDs within evaluation criteria?*

Yes

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was used to qualify the common laboratory contaminant acetone reported at concentrations greater than two times (2X) the reporting limit (RL), since acetone is not representative of site conditions. Additionally, USEPA Method 5035A states that acidification of certain soils with sodium bisulfate may produce a false positive acetone artifact of 100-200 ppb, or more. Acetone reported at concentrations less than 200 ppb (ug/kg) were qualified.

| Field ID | Analyte | New RL | Qualification | Comments |
|---|---|---|---|---|
| VMP-46 (10-11) 092311 | Acetone | 179 ug/kg | **U** | Professional Judgment |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. VOC surrogate recoveries for samples VMP-46 (30-31.5) 092611 and VMP-46 (10-12.5) 092611, and TPH-DRO/ORO surrogate recoveries for sample VMP-40 (10-12.5) 092611 were outside evaluation criteria. Although not indicated in the laboratory case narrative, chloroform was detected in the trip blank. The compound TPH-DRO was qualified due to field duplicate RPD outside evaluation criteria in field duplicate pair, VMP-40 (10-12.5) 092611/ VMP-40 (10-12.5) 092611 DUP. Professional judgment was used to qualify 2-butanone (MEK) and methylene chloride in several samples. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.0°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required. Additionally, although VOC analysis was only requested for trip blank TB092611-1, both trip blanks TB092611-1 and TB092611-2 were analyzed for VOCs.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration |
|---|---|---|---|
| TB092611-1 | VOCs | Chloroform | 1.9 ug/L |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

Analytical data that required qualification based on LCS data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. LCS MSN2094-BS/BSD was associated with trip blank samples TB092611-1 and TB092611-2. Trip blank samples are quality control samples and are not qualified.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. VOC surrogate recoveries for sample VMP-34 (20-22.5) 092711 were outside evaluation criteria. VOC MS/MSD recoveries were outside of evaluation criteria. Although not indicated in the laboratory case narrative, bromodichloromethane was detected in the equipment blank, and chloroform was detected in the equipment blank and trip blank TB092711-1. The compound TPH-GRO was qualified due to a greater than five times (5X) the reporting level difference in field duplicate pair, VMP-36 (10-12.5) 092711/ VMP-36 (10-12.5) 092711 DUP. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.7°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration |
|---|---|---|---|
| VMP-46 (30-31.5) 092711 EB | VOCs | Bromodichloromethane | 2.8 ug/L |
| VMP-46 (30-31.5) 092711 EB | VOCs | Chloroform | 4.9 ug/L |
| TB092711-1 | VOCs | Chloroform | 1.8 ug/L |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/ LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD/ RPD Criteria |
|---|---|---|---|---|---|
| MSP1816-BS | VOCs | Acetone | **133** | NA | 70-130 |
| MSP1816-BS | VOCs | Acrolein | **284** | NA | 70-130 |
| MSP1817-BS | VOCs | Acrolein | **354** | NA | 70-130 |
| MSP1817-BS | VOCs | n-Butylbenzene | **134** | NA | 70-130 |
| MSP1817-BS | VOCs | p-Isopropyltoluene | **132** | NA | 70-130 |
| MSN2098-BS | VOCs | Acrolein | **206** | NA | 70-130 |
| MSN2098-BS | VOCs | Acrylonitrile | **564** | NA | 70-130 |

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. LCS MSN2098-BS was associated with trip blank samples TB092711-1 and TB092711-2. Trip blank samples are quality control samples and are not qualified. No qualification of data was required.

## 6.0 Surrogate Recoveries

# SVE Install 2011 Data Review

**Laboratory SDG: MC4623**

**Data Reviewer: Melissa Mansker**

**Peer Reviewer: Elizabeth Kunkel**

**Date Reviewed: 1/24/2012**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |

| SVE-06 (16-18) 101311 | SVE-06 (16-18) 101311 |
| TB 101311 | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. Although not indicated in the laboratory case narrative, acetone was detected in the method blank. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.7°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required. Additionally, sample IDs for SVE-06 (16-18) 101311 and SVE-06 (16-18) 101311 were incorrectly transcribed by the laboratory; data were reported using correct COC designations for sample IDs.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration |
|---|---|---|---|
| MSV128-MB | VOCs | Acetone | 9.4 ug/L |

Analytical data that required qualification based on blank contamination are in included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration (10X for common laboratory contaminants) did not require qualification.

| Sample ID | Parameter | Analyte | New RL | Qualification |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. Although not indicated in the laboratory case narrative, chloroform was detected in trip blank TB 102111. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.9°C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration |
|---|---|---|---|
| TB 102111 | VOCs | Chloroform | 1.7 ug/L |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

*Yes,* the laboratory case narrative indicated VOC LCS/LCSD recoveries were outside evaluation criteria. Although not indicated in the laboratory case narrative, acetone was detected in the method blank. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 0.9°C which is outside temperature criteria 4°C ± 2°C. Samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration |
|---|---|---|---|
| MSV135-MB | VOCs | Acetone | 9.2 ug/L |

Analytical data that required qualification based on blank contamination are in included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration (10X for common laboratory contaminants) did not require qualification.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS/LCSD recoveries and VOC LCS/LCSD RPDs were outside evaluation criteria. VOC MS/MSD recoveries and MS/MSD RPDs were outside of evaluation criteria. Although not mentioned in the laboratory case narrative, acetone was detected in the method blank. Professional judgment was used to evaluate and qualify acetone in sample VMP-45 (30-31) 110111-Dup. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 1.4°C which is outside temperature criteria 4°C ± 2°C. Samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration |
|---|---|---|---|
| MSV140-MB | VOCs | Acetone | 9.2 ug/L |

Analytical data that required qualification based on blank contamination are in included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration (10X for common

laboratory contaminants) did not require qualification.

| Sample ID | Parameter | Analyte | New RL | Qualification |
|---|---|---|---|---|
| VMP-44 (20-21) 110111 | VOCs | Acetone | 16.9 ug/kg | **U** |
| VMP-44 (30-31) 110111 | VOCs | Acetone | 29.9 ug/kg | **U** |

| VMP-45 (20-21) 110111 | VOCs | Acetone | 15.9 ug/kg | **U** |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

|---|---|---|---|---|---|
| MSV140-BS | VOCs | Acrolein | **186** | NA | 70-130 |

| MSL1960-BS/BSD | VOCs | Vinyl acetate | **55/57** | 4 | 70-130/25 |

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. LCS/LCSD MSL1960-BS/BSD was associated with equipment blank VMP-44 (30-31) 110111-EB and trip blank TB-110111. Equipment blanks and trip blanks are quality control samples and are not qualified. LCS samples are not qualified based on RPD alone and LCS recoveries were within acceptance criteria, therefore, did not require qualification. No qualification of data was required.

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

Yes, sample VMP-45 (20-21) 110111 was spiked and analyzed for VOCs and TPH-GRO/DRO/ORO.

*Were MS/MSD recoveries within evaluation criteria?*

No

| MS/MSD ID | Parameter | Analyte | MS/MSD Recovery | RPD | MS/MSD/RPD Criteria |

| VMP-45 (20-21) 110111 | VOCs | Vinyl acetate | **65/54** | 22 | 70-130/30 |

USEPA National Functional Guidelines for Organic Data Review indicates that organic data does not require qualification based on MS/MSD data alone and LCS recoveries were within evaluation criteria with the exception of compounds discussed in Section 5.0 of this data review. No qualification of the data was required.

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

Yes

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-45 (30-31) 110111 | VMP-45 (30-31) 110111-DUP |

*Were field duplicates within evaluation criteria?*

Yes

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was used to qualify the common laboratory contaminant acetone reported at concentrations greater than two times (2X) the reporting limit (RL), since acetone is not representative of site conditions. Additionally, USEPA Method 5035A states that acidification of certain soils with sodium bisulfate may produce a false positive acetone artifact of 100-200 ppb, or more. Acetone reported at concentrations less than 200 ppb (ug/kg) were qualified.

| Field ID | Analyte | New RL | Qualification | Comments |
|---|---|---|---|---|
| VMP-45 (30-31) 110111-DUP | Acetone | 113 ug/kg | **U** | Professional Judgment |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC and SVOC LCS recoveries were outside evaluation criteria. SVOC MS/MSD recoveries and one MS/MSD RPD were outside evaluation criteria in sample SVE-25(S) 12-14. Professional judgment was used to qualify acetone in sample SVE-25(S) 19-21. These issues are addressed further in the appropriate sections below.

The cooler receipt form narrative indicated samples were received by the laboratory at 1.7° C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

Analytical data that required qualification based on LCS data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Professional judgment was used to not reject 1-Methylnaphthalene due to analyte not being present in spiking solution. LCS MSR804-BS/BSD was associated with trip blank sample TB-050311. Trip blank samples are quality control samples and are not qualified.

USEPA National Functional Guidelines for Organic Data Review indicates that organic data does not require qualification based on MS/MSD data alone and LCS recoveries were within evaluation criteria with the exception of compounds listed and qualified as appropriate in Section 5.0 of this data review. No further qualification of data was required.

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

Yes

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes

Professional judgment was used to qualify the common laboratory contaminant acetone reported at concentrations greater than two times (2X) the RL since acetone is not representative of site conditions. Additionally, USEPA Method 5035A states that acidification of certain soils with sodium bisulfate may produce a false positive acetone artifact of 100-200 ppb, or more.

Acetone reported at concentrations less than 200 ppb (ug/kg) were qualified.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS recoveries were outside evaluation criteria. VOC MS/MSD recoveries and MS/MSD RPDs were outside evaluation criteria in sample VMP-32-10-12. VOC surrogate recoveries were outside evaluation criteria. Although not indicated in the laboratory case narrative, the difference in benzene results for the field duplicate pair VMP-31-17-18.5/VMP-31-17-18.5-Dup was greater than five times (5X) the reporting level; therefore results were qualified as estimated. Additionally, professional judgment was used to qualify acetone in samples VMP-31-17-18.5-Dup and VMP-31-10-11. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated samples were received by the laboratory at 0.8° C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

USEPA National Functional Guidelines for Organic Data Review indicates that organic data does not require qualification based on MS/MSD data alone and LCS recoveries were within evaluation criteria for these compounds, with the exception of 2-butanone (MEK), chloromethane, and vinyl acetate, which had been previously qualified, therefore no further qualification of the data was required.

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes

Professional judgment was used to qualify the common laboratory contaminant acetone reported at concentrations greater than two times (2X) the RL since acetone is not representative of site conditions. Additionally, USEPA Method 5035A states that acidification of certain soils with sodium bisulfate may produce a false positive acetone artifact of 100-200 ppb, or more. Acetone reported at concentrations less than 200 ppb (ug/kg) were qualified.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated VOC LCS recoveries were outside evaluation criteria. This issue is addressed further in the appropriate section below.

The cooler receipt form indicated samples were received by the laboratory at 0.7° C which is outside temperature criteria 4°C ± 2°C. All samples were received in good condition; no qualification of data was required.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No
