ILLINOIS EPA RCRA CORRECTIVE ACTION CERTIFICATION

This certification must accompany any document submitted to Illinois EPA in accordance with the corrective action requirements set forth in a facility's RCRA permit. The original and two copies of all documents submitted must be provided.

1.0 Facility Identification

Name: Equilon Enterprises LLC d/b/a/ SOPUS
County: Madison
Street Address: 900 South Central Ave
Site No. (IEPA): 1191150002
City: Roxana
Site No. (USEPA): ILD080 012 305

2.0 Owner Information

Name: Not Applicable
Mail Address:
City:
State: Zip Code:
Contact Name:
Contact Title:
Phone:

3.0 Operator Information

Name: Equilon Enterprises LLC d/b/a/ SOPUS
Mail Address: 128 East Center Street
City: Nazareth
State: PA Zip Code: 18064
Contact Name: Leroy Bealer
Contact Title: Principal Program Manager
Phone: 484-632-7955

4.0 Type of Submission (check applicable item and provide requested information, as applicable)

☐ RFI Phase I Workplan/Report
☐ RFI Phase II Workplan/Report
☐ CMP Report;
☒ Other (describe): Final Design and Workplan for Roxana Public Works Yard Steam Enhanced Extraction

IEPA Permit Log No. B-43R
Date of Last IEPA Letter on Project: October 1, 2020
Log No. of Last IEPA Letter on Project: B-43R-CA-95, CA-98

Does this submittal include groundwater information: ☒ Yes ☐ No

Date of Submittal: January 31, 2022

5.0 Description of Submittal: (briefly describe what is being submitted and its purpose)

Final design and workplan for proposed Steam Enhanced Extraction system at the Roxana Public Works Yard

6.0 Documents Submitted (identify all documents in submittal, including cover letter; give dates of all documents)

Cover letter, RCRA Corrective Action Certification, and Public Works Yard Steam Enhanced Extraction Workplan.

Copy of submittal also sent directly to Collinsville FOS, B. Sinnott, R. Watson, and A. Butler of IPEA.

7.0 Certification Statement

(This statement is part of the overall certification being provided by the owner/operator, professional and laboratory in Items 7.1, 7.2 and 7.3 below). The activities described in the subject submittals have been carried out in accordance with procedures approved by Illinois EPA. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

For: Public Works Yard Steam Enhanced Extraction Workplan
Date of Submission: January 31, 2022

7.1 Owner/Operator Certification

(Must be completed for all submittals. Certification and signature requirements are set forth in 35 IAC 702.126.) All submittals pertaining to the corrective action requirements set forth in a RCRA Permit must be signed by the person designated below (or by a duly authorized representative of that person):

1. For a Corporation, by a principal executive officer of at least the level of vice president.
2. For a Partnership or Sole Proprietorship, by a general partner or the proprietor, respectively.
3. For a Governmental Entity, by either a principal executive officer or a ranking elected official.

A person is a duly authorized representative only if:

1. the authorization is made in writing by a person described above; and
2. the written authorization is provided with this submittal (a copy of a previously submitted authorization can be used).

Owner Signature: *NOT APPLICABLE* Date: _____

Title: _____

Operator Signature: _____ Date: 1/28/2022

Title: **Principal Program Manager**

7.2 Professional Certification (if necessary)

Work carried out in this submittal or the regulations may also be subject to other laws governing professional services, such as the Illinois Professional Land Surveyor Act of 1989, the Professional Engineering Practice Act of 1989, the Professional Geologist Licensing Act, and the Structural Engineering Licensing Act of 1989. No one is relieved from compliance with these laws and the regulations adopted pursuant to these laws. All work that falls within the scope and definitions of these laws must be performed in compliance with them. The Illinois EPA may refer any discovered violation of these laws to the appropriate regulating authority.

Any person who knowingly makes a false, fictitious, or fraudulent material statement, orally or in writing, to the Illinois EPA commits a Class 4 felony. A second or subsequent offense after conviction is a Class 3 felony. (415 ILCS 5/44 (h))

Log No. B-43R.

Dear Mr. Smith:

On behalf of Shell Oil Products US (SOPUS), AECOM is submitting the enclosed referenced workplan and RCRA Correction Action Certification Form for your review.

Copies of this submittal are being sent separately directly to Amy Butler and the Collinsville, Illinois office with Illinois Environmental Protection Agency (IEPA).

If you have any questions during your review, please contact Buddy Bealer, SOPUS Principal Program Manager, at leroy.bealer@shell.com (484-632-79556), or Wendy Pennington at wendy.pennington@aecom.com (314-452-8929).

Sincerely,

AECOM, on behalf of Shell Oil Products US

1. Introduction

On behalf of Equilon Enterprises LLC, dba Shell Oil Products US (SOPUS), AECOM Technical Services, Inc. (AECOM) has prepared this workplan to describe the proposed steam enhanced extraction (SEE) system for remediation of subsurface impacts at the Village of Roxana Public Works Yard (PWY) located in Roxana, Illinois (**Figure 1**).

This workplan contains the following sections:

- Site Background
- Remedial Objectives and Approach
- System and Operational Overview
- Health and Safety
- Steam Extraction Vapor Monitoring Plan
- Steam Effectiveness Plan
- Monitoring Program Modifications
- Permits and Notifications
- Reporting

The Predesign Investigation Report and Final SEE Design are included as attachments.

1.1 Schedule

Below is a proposed timetable in order to achieve SEE operation at the PWY during the 2022 construction season. If the schedule below is delayed for any reason, operational activities will commence in 2023.

January 2022:	Submittal of SEE workplan to IEPA
February 2022:	Submittal of permit modifications to recently approved FESOP; submittal of injection well and water discharge permitting
March 2022:	IEPA response to SEE Workplan (schedule assumes approval of Workplan/SEE Final Design; approval of permitting items)
April - June 2022:	Drilling activities begin (SEE System and Vapor Monitoring Network). SEE system construction, subject to material and equipment availability.
July 2022:	SEE system online
July 2022:	Steam Extraction Vapor Monitoring Program commences
January 2023 or before:	SEE system shut down
July 2023:	Steam Effectiveness Sampling commences

2. Background

The PWY is bounded on the west and north by Illinois Route 111/Old Edwardsville Road and East Eighth Street, respectively. There is a Norfolk Southern railroad corridor along the southern boundary and the Phillips 66 Wood River Refinery (WRR) forms the eastern boundary. Residential properties are directly north of the PWY. The property occupies approximately 2.4 acres, where approximately 0.4 acres is covered or obstructed by buildings and/or structures. Topographically, the western and southern portions of the PWY are at a lower elevation relative to the northeastern portion of the PWY. This relief across the PWY is approximately 13 feet. The PWY owned by the Village of Roxana and is infrequently used by the Village for vehicle maintenance and storage. The PWY is also the location of the Village's former wastewater treatment plant (WWTP). In-ground concrete tanks associated with the WWTP continue to be used to help manage stormwater overflow in the Village. Most of the PWY is enclosed by a chain link fence.

SOPUS has conducted several subsurface investigations at the PWY (URS, 2007). Quarterly groundwater monitoring began in 2010. These investigations indicate dissolved-phase benzene concentrations ranging from 100 milligrams per liter (mg/L) to 1,900 mg/L[1]. In 2011, SOPUS constructed a soil vapor extraction (SVE) system compound on the adjoining WRR which includes a header-line connecting to six extraction wells at the PWY. There are also eight multilevel vapor monitoring probes (VMPs), and two groundwater monitoring wells at the PWY. The SVE system has operated at the PWY since late 2012. Soil vapor data for the PWY demonstrates the shallow and intermediate zones have been remediated. Deep (>25 feet below ground surface) soil gas concentrations have also decreased over time but remain in some areas with fluctuating groundwater levels and submerged impacts.

The WRR, adjacent to the eastern PWY boundary, currently maintains hydraulic control of groundwater in the area with a groundwater production system consisting of several pumping wells which operate at a minimum combined flow of 3,000 gallons per minute (gpm). The pumped groundwater is used by Phillips 66 (P66), the refinery operator, as process and cooling water. Groundwater pumping is conducted to contain groundwater contamination within refinery property boundaries.

IEPA requested that SOPUS evaluate additional remedial technologies to reduce the highest benzene concentrations in the PWY. In 2019, in-situ thermal remediation (ISTR) was identified as a potentially viable alternative; a predesign investigation was conducted to gather information to better assess its viability. Results from the June and July 2019 predesign investigation found that the zone of highest impact in the PWY ranges in elevation from approximately 388 to 398 feet above mean sea level which correlates to approximately 37 to 54 feet below ground surface (bgs) due to the relief at the PWY. Results from the predesign investigation indicate the highest dissolved-phase benzene concentrations are approximately 7 to 17 feet below the water table, based on groundwater elevations observed during 4Q21. Additionally, detected benzene concentrations exceeding the soil saturation limit suggest the presence of residual non-aqueous phase liquid (NAPL). Given the results of the predesign investigation, AECOM and SOPUS requested proposals from multiple leading ISTR firms, and each firm proposed implementation of SEE as the most effective ISTR technology for soil and groundwater impacts at the PWY. SEE would allow for the most efficient and uniform heating based on site-specific characteristics. Upon review of the proposals, AECOM on behalf of SOPUS, has contracted McMillan-McGee Corporation (McMillan-McGee) to begin work on the design of the SEE system for the PWY. **Attachment A – 2019 Predesign Investigation Report** contains a summary of the activities performed and the results found during the 2019 Predesign Investigation at the PWY.

In response to an April 2017 Tiered Approach to Corrective Action Objectives (TACO) Tier 3 Demonstration Report (Tier 3 Report) (AECOM, 2017), and subsequent submittals pertaining to the Tier 3 Report, the IEPA issued a letter dated October 1, 2020 (IEPA, 2020) citing conditions and modifications to the SVE system shutdown procedures outlined in the Tier 3 Report. At the time of this submittal, SVE operations continue in the PWY as outlined in the 3Q21 Soil Vapor Sampling and SVE Monitoring Report. However, current SVE operations in the PWY will cease with the implementation of SEE. **Sections 4.4** and **8.1** outline the how SEE will alter the existing remedial action plan for the PWY. A response to the 10/1/20 letter is being submitted separately and concurrently with this workplan.

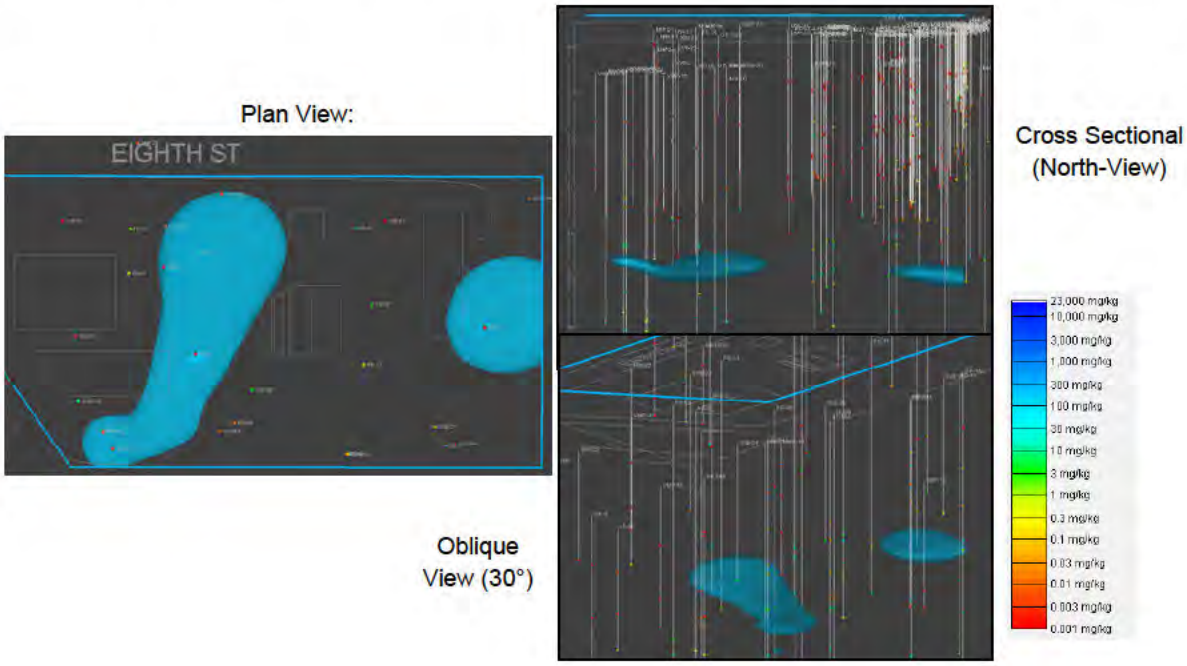
[1] Values are from Roxana interim groundwater monitoring reports – wells MW-7 and MW-8.

Two technical discussions between AECOM, SOPUS, and IEPA were had with respect to the SEE system. The initial discussion occurred on July 15th, 2021.

The second technical discussion occurred on November 4th, 2021.

3. Remedial Objective and Approach

SEE will remove volatile organic compound (VOC) contamination from the subsurface by enhanced mobilization, volatilization, and degradation reactions, through a combination of steam injection (SI) and multiphase extraction (MPE) throughout the treatment area. SEE will target VOCs sorbed to saturated soils, including VOCs as NAPL. Evaluation of the results obtained during the 2019 Predesign Investigation identified where the potential source of contamination is within the PWY. Therefore, the SEE system has been developed to target two distinct areas within the bounds of the Public Works Yard. The boundaries of these areas have been defined based on data collected and modeled from the 2019 predesign investigation and other data historically collected. Modeling of the 2019 benzene concentrations in soil above the saturation limit is shown below. Additional data and modeling can be found in **Attachment A – 2019 Predesign Investigation Report**. These treatment areas are described further in **Section 4**.



The remedial objective of SEE is to accelerate the reduction of VOC mass in the PWY; specifically, the reduction of benzene concentrations within the treatment areas, to the extent practicable using SEE. Remaining concentrations will be addressed by natural attenuation processes and continued pumping from the WRR groundwater production system. Mass reduction calculations will be conducted regularly during SEE operations as conditions pertaining to SEE system shutdown are in part tied to a reduction is mass recovery rates. A more detailed explanation can be found in the **Attachment B – Final SEE Design**.

The primary mechanism used by SEE for remediation involves the mobilization of subsurface contaminants by heat injection and recovery of the mobilized contaminants at MPE wells. Contaminants will be recovered both as a mobilized liquid and vapor. In addition, a zone of enhanced biodegradation will form along the outside boundary of the thermal treatment zone due to elevated groundwater temperatures on the periphery on the steam injection area, and any vapors generated via biodegradation will also be captured by the SEE system's MPE wells.

The proposed schedule presented in **Section 1.1** is based on SEE operations being performed beginning in Summer 2022. Summer operation is preferred as it will result in less heat loss and will be during a period of less natural gas demand.

Perimeter air and soil vapor monitoring will be conducted throughout the entire operating period. The need to add additional soil vapor monitoring points along Eighth Street to monitor for the safety of the residents has been addressed and is discussed in **Section 6**.

The SEE system should effectively treat volatile compounds within the targeted treatment zone (TTZ). Historically, kerosene impacts have been observed within the southern portion of Area B. While many of the compounds in kerosene boil at temperatures greater than 100°C, steam stripping will be effective at volatilizing much of the mass much in same way that soil vapor extraction effectively treats gasoline impacted soil with compounds that boil well above ambient temperatures.

The SEE system is designed to treat impacted soil and groundwater within the TTZ. As SEE is designed to dewater the TTZ and pass steam through the unsaturated soil, soil outside the TTZ will not effectively be dewatered and therefore will see limited treatment. Typically, it is assumed that soil greater than a few feet from the TTZ will have limited treatment. While this soil will experience a temperature increase, neither steam nor air will pass through the soil resulting in limited volatilization. Heated water from the SEE system will increase hydrocarbon solubility and this enhanced dissolved phase impact will be captured in the process water extraction system. It should be noted that groundwater is anticipated to return to background temperatures just outside the TTZ and should not affect the larger impact observed within the refinery.

Once shutdown criteria outlined in **Attachment B** have been met, the SEE system will cease steam injection, and MPE will continue for a period of two to three weeks. Perimeter air monitoring will continue during those two to three weeks., Soil vapor monitoring will continue, following the sample plan outlined in **Section 6**, along the boundaries of PWY until the subsurface cools to ambient conditions, or a period of six months, whichever occurs first. A Steam Effectiveness Plan consisting of groundwater and soil sampling will commence once the subsurface has cooled to ambient temperature, or after a period of approximately six months. Refer to **Section 7** for detailed information pertaining to the Steam Effectiveness Plan.

4. System and Operational Overview

The work sequence for SEE consists of the following steps:

1. Permitting requirements
2. Construction and System Installation
3. Acceptance Testing
4. Start-Up, Operations, Maintenance, and System Optimization
5. Data Collection and Management
6. System Shutdown Procedures/Performance Evaluation
7. Demobilization and Site Restoration
8. Post-SEE Monitoring

4.1 Wellfield Layout and Treatment Volume

The SEE wellfield layout is based on two areas targeted for treatment in the PWY as shown on **Figure 2**. The targeted treatment zones (TTZ) were defined using benzene data collected during the 2019 investigation and historic site investigations. The TTZs address locations where benzene concentrations meet or exceed the site-specific soil saturation limit for benzene (726 mg/kg). The two areas are designated as Treatment Areas A and B with a combined total area of approximately 48,204 square feet (ft^2). Treatment Area A is approximately 28,060 ft^2 with a vertical treatment interval between 378 and 397 feet above mean sea level (amsl); and Treatment Area B is approximately 20,144 ft^2 with a vertical treatment interval between 389 and 395 feet amsl. The subsurface treatment volume is approximately 23,183 cubic yards (CY). SEE injection points will be located laterally and screened vertically to create a heated subsurface zone to fully encompass the targeted volume (23,183 CY) of subsurface soil and groundwater, with a total thermal influence area (area subject to thermal treatment and temperature changes) of approximately 48,204 square feet. The wellfield layout includes steam injection wells, MPE wells, and temperature sensors. The quantity and specifications for each type of point are as follows:

- 81 Steam injection wells based on a 30-foot spacing, each constructed of 2-inch diameter steel casing with 2 to 3 feet of screen;
- 36 MPE wells based on a 30- to 50-foot spacing and 30-foot radius of capture, each fitted with 4-inch diameter 10-slot stainless steel wire-wrap screen;
- 16 Temperature sensor locations, each with 15 sensing elements at vertical intervals, for a total of 240 sensing elements. The vertical placement for temperature sensors will vary based on site location and will be installed at intervals best suited to ensure that target temperature is achieved throughout the treatment areas.

Placement of the above-mentioned equipment is subject to change and may vary from the proposed locations based on utilities (above and below ground), subsurface obstructions (i.e., pipelines), and potential design changes based on assessment findings during installation. Well field and system layouts, system schematics, and operational procedures can be found in **Attachment B**.

4.2 Aboveground Equipment

The SEE includes a steam boiler unit for the steam injection wells, and treatment units for vapor and liquid streams extracted from the subsurface via the MPE wells. McMillan-McGee's has sized a boiler unit with a 500 horsepower (HP) (21 MMBTU/hr) capacity and has calculated a vapor recovery of up to 2,000 standard cubic feet per minute (SCFM). The majority of contaminant mass removal will occur in the vapor phase; mass removal will occur to a lesser degree in the liquid phase. Recovered vapor will be conveyed to the existing regenerative thermal oxidizer (RTO)

located on WRR property for destruction. In addition, a backup vapor carbon vessel system will be implemented so the extraction process stream can continue to be captured in the event of an interruption of the RTO. Recovered liquid is planned for treatment using air strippers and liquid-phase granular activated carbon (LGAC) before discharge to the Publicly Owned Treatment Works (POTW) via the sewer system. Air stripper off-gas will be conveyed to the RTO for destruction.

4.3 Power and Duration

Based on McMillan-McGee's calculations, approximately 8,000 pounds of steam per hour must be provided to the injection wells continuously over a 60 to 90-day period for the subsurface to reach target temperature. It is estimated that the total operational run time for the SEE system, including the time required to reach target temperature, is 180 days. The total energy (power x duration) required over a six-month operational period is approximately 10,460 megawatt-hours (MWhr).

4.4 Construction and System Installation

Construction and installation of the SEE system will commence upon regulatory approval of this workplan, associated permitting, and the availability of equipment and/or materials. Equipment will be provided by the SEE contractor. AECOM will oversee the installation, which is anticipated to follow the sequence of activities listed below:

1. Manufacturing of injectors, electronic control system, subsurface sensor equipment;
2. Delivery of boilers and necessary electrical switchgear;
3. Drilling and installation of injectors and temperature sensors;
4. Installation and construction of MPE wells;
5. Delivery and connection of boiler(s) to a fuel source;
6. Connection of injectors to steam header system;
7. MPE system installation and connection;
8. Connection of subsurface sensors to server; and
9. Completion of feed water lines and surface piping.

AECOM will oversee SEE contractor technicians as well as any local subcontractors needed (i.e., electricians for power drop connections).

Additionally, any existing wells (soil vapor extraction, groundwater monitoring, or vapor monitoring points) that are of PVC construction will be abandoned prior to operation of the SEE system, as they will not withstand the temperatures generated during SEE. **Section 8** outlines the proposed alterations to the existing vapor monitoring and groundwater monitoring networks.

Upon successful system install, a period of acceptance testing will occur prior to full scale system operation. Acceptance testing is done to ensure the following:

1. All necessary personnel are familiar with safety protocols while working near SEE equipment.
2. Steam injection system is operating as intended.
3. Extraction and treatment system are operating as intended.
4. Data collection systems are logging data correctly and data is being relayed and stored accordingly.

4.5 Operations, Maintenance, and System Optimization

The SEE system will require periodic maintenance once operations have begun. The Programmed Logic Controller (PLC) and internet-based monitoring system allow for remote viewing of all operational data and system control from any computer connected to the internet via password protected site access. The initial start-up procedure will include the following tasks:

1. The site will be cleared of all unnecessary personnel.
2. Pressure regulators will be opened at a low pressure and injection setting.
3. Trained personnel will perform a short propagation test throughout the perimeter to assess the safety and predictable operation of the SEE system.
4. Once this procedure is complete, the injection wells will be energized at target operating values and the steam propagation test will be repeated throughout the project and surrounding area.

Once safe operating conditions are established for the SEE system, project personnel will be allowed to commence with their normal duties. This procedure will be repeated at any time when pressure regulators are adjusted, with any other major operational change in the project, or after a severe weather event.

In order to assess system performance, AECOM and the subcontractor will monitor the following:

Influent and effluent concentrations	Mass Removed
Process Temperatures	Subsurface Temperatures
Steam Injection Flow Rates	Vapor Extraction Rates
Well Vacuum and Temperature	Soil Vapor Concentrations
Process Flow (both liquid and vapor)	Ambient Air Concentrations

Weekly Tedlar© bag samples will be collected from the Public Works Header at the RTO, as this is the location where the SEE influent stream enters the existing SVE system. This data will be used in tandem with the data that is to be collected from the vapor monitoring network outlined in **section 6**. Analytical vapor samples will be collected monthly in order to comply with the current SVE/RTO system operating permit. Analyses include:

1. Volatile Organic Compounds (VOCs) via Modified USEPA Total Organic-15 (TO-15) (including butane and isopentane), and
2. Natural gases (defined for purposes of this report as oxygen, nitrogen, carbon monoxide, methane, carbon dioxide, ethane, and ethene) via Modified ASTM D-1945.

4.6 System Shutdown Procedures/Performance Evaluation

After up to six months of system operation and/or attainment of the system performance objectives, the steam will be shut off, and system shutdown procedures will commence. System shutdown will be based on meeting the target soil temperature and any one of the following criteria:

1. Achieved a mass recovery rate of 10% of the peak (over 14 days/4 sampling events); OR
2. Achieved a linear mass recovery rate curve or decreasing recovery trends using statistical trend analysis (e.g., Mann-Kendall); OR
3. Achieved or exceeded a temperature of 80°C at 90% of the subsurface sensors within the heated volume, and operate for up to 135 days after target temperatures have been met
4. Reduced petroleum concentrations within the TTZs to the extent practical using SEE.

4.7 Demobilization and Site Restoration

Upon completion of the SEE project, SEE infrastructure will be removed. The MPE wells will potentially stay in place so they can potentially be used for rebound extraction, or groundwater monitoring (as outlined in **Section 8**, if the need arises, until such a time that the existing SVE system is decommissioned). Decommissioning will include the following tasks:

1. Disconnect all electrical connections;
2. Disconnect and dismantle steam boiler circulation system;

3. Remove the treatment system;
4. Disconnect and dismantle the surface facilities;
5. Demobilization of recoverable equipment from the site;
6. Perform all site restoration activities; and
7. Complete the Task Close Out Report.

5. Health and Safety

Health and Safety during these installation activities will be governed by a site-specific Health and Safety Plan (HASP). Personal protective equipment (PPE) and monitoring equipment to be used will be described in a HASP.

Shell's 9 Life Saving Rules are mandatory rules for working on any Shell property or site and they aim to help employees and contractors comply with company-wide rules covering the activities of highest safety risks. Additionally, for all work done for Shell Soil and Groundwater (SGW) in the USA, the Shell Permit to Work (PTW) system must be followed. Employees and subcontractors working on Shell SGW projects will complete LSR training annually, PTW training bi-annually, and carry a copy of the training certificates with them when working on Shell sites. Once the final SEE system design has been approved, a site-specific HASP and Job Hazard Analyses (JHA) will be created.

5.1 Decontamination

Field personnel and equipment will undergo decontamination procedures for the health and safety of those present, to maintain sample integrity, and to minimize the potential for cross-contamination. Decontamination will be in accordance with the most recent version of the decontamination standard operating procedures (SOP) for the Roxana project and details will be further described in the HASP.

5.2 Investigation Derived Waste & Residual Management

Investigation derived waste (IDW) will include, but is not limited to, investigation spoils, decontamination water, purge water, PPE, and expendable materials (e.g., gloves, tubing, etc.). Expendable materials having a low probability of contamination will be collected in trash bags and disposed as municipal waste. Potentially impacted expendable materials and environmental media will be collected, placed in labeled and closed containers, sample for characterization and disposed in accordance with applicable federal, state, and local regulations. Additional details pertaining to IDW generation and management will be outlined in an IDW Management Plan, which will be developed prior to initiation of site construction activities.

6. Steam Extraction Vapor Monitoring Plan

A soil vapor monitoring network will be installed in the corridor between the PWY northern boundary and the residential area just north of Eighth Street. Presently, there are a total of six existing vapor monitoring points (VMPs) in the 8th Street corridor (VMP-10, -11, -17, -18, -19, -41). In addition to these six VMPs, eleven SVPs (steam vapor monitoring points[2]) will be installed to expand the existing network to fill in potential vapor pathway gaps. The proposed vapor monitoring network can be seen in **Figure 3**. SVPs will be on approximately fifty-foot centers and divided into two rows. SVP-1 through SVP-4, in addition to existing VMPs (10, 11, and 17) will be referred to as the primary row SVPs, while SVP-5 through SVP-11, in addition to VMP-18 and VMP-19, will be referred to as the secondary row SVPs.

The primary row of SVPs will be located within the SEE system's radius of influence (ROI), while the secondary row of SVPs is located at, or beyond, the maximum ROI of the SEE system. The primary row of SVPs will be screened at three intervals (shallow, intermediate, and deep), with the shallow and intermediate depths being screened at approximately 10 feet and 20 feet below ground surface (bgs). The deepest interval will be screened as close to 30 feet bgs as possible but may be shallower in some locations. The vertical relief and elevation of the water table will determine final depth of the deepest screened interval. The secondary row of SVPs will be screened based on the results of a foundation evaluation of the 8th Street residences. The evaluation will determine the foundation depth and style (crawl space vs. basement vs. slab on grade). SVPs will be screened at four depths if the nearest home is a slab on grade, bi-level home, or has a crawl space; all of which may extend up to five and half feet below ground surface. If the nearest home is constructed with a basement that extends to a minimum of seven and at half feet bgs, a shallow (less than 10 feet bgs) screened interval will not be needed, and the SVP will be screened at three intervals following the same procedure outlined for the primary row of SVPs (1 through 4). VMP-18 and VMP-19 are directly next to SVP-8 and SVP-6 respectively, and they will be utilized for the shallow port if needed, as they are both screened in the less than 10 feet bgs interval.

Upon installation and development, in accordance with the most current soil vapor sampling SOP, samples from each SVP interval will be collected for analysis. Samples will be analyzed for volatile organic compounds (VOCs) via stainless steel canisters and Modified USEPA Total Organic-15 (TO-15) to establish a baseline of soil vapor conditions at each SVP. Additionally, Tedlar© bags will be collected to add field screening results (CH_4, lower explosive limit (LEL), CO_2, O_2, PID response, THC, and non-methane hydrocarbons (referred to as petroleum hydrocarbons (PHC) on this Site) to the baseline at each SVP. Vacuum and pressure readings will also be collected each time an SVP is visited for sample collection. Field screening will be performed on site by trained personnel using the following equipment:

- Landtec GEM-2000 (used for measuring CH_4, LEL, CO_2, O_2)
- Thermo Scientific TVA-2020 Vapor Analyzer - Photoionization Detector (PID) and,
- Thermo Scientific TVA-2020 Vapor Analyzer - Flame Ionization Detector (FID) (used for measuring THC and PHC)

With a baseline for each SVP established, and once the SEE system comes online, start-up testing will be conducted to ensure emission capture and control along the Eighth Street corridor. Start-up testing will consist of collecting Tedlar bags for field screening, with the sampling frequency following the same logic of that which was outlined in the 2011 Soil Vapor Extraction Pilot Test Report (AECOM, 2011). Sampling program frequency will follow the outlined criteria below:

- Once per week until such a time that temperatures within the target treatment zones (TTZ) reach half of the expected target temperature, then
- Twice a week until the optimal target temperature is met, then

[2] Steam vapor monitoring points (SVPs) are constructed similarly to VMPs, however their purpose for monitoring is specific to operation of SEE.

- Three times a week after target temperature is met and will continue until two weeks post SEE system shut down.

The collection of samples for laboratory analysis during SEE operation will be determined by comparing field screening results to the established baseline for each SVP. If any exceedance of the Tier 1 residential soil gas indoor inhalation remediation objectives in field screening results is observed in a secondary SVP (SVP-5 through SVP-11), a sample will be collected for laboratory analysis via TO-15, as those locations are at or beyond the maximum extent of capture for the SEE system[3]. The field screening results within the primary SVPs (SVP-1 through SVP-4) have the potential to increase as they are located within the capture zone of the SEE system. Therefore, samples for laboratory analysis will only be collected from the primary row of if the baseline results were clean[4] and an increase in field screening results is observed, otherwise laboratory samples from those locations will not be collected during SEE operations.

Once SEE shutdown criteria have been met, steam injection will cease while extraction continues for a duration of approximately two weeks. At this stage in the project, shutdown testing will begin. Samples will be collected following a similar sequence to that of start-up testing. The frequency of collecting Tedlar© bags during shutdown testing are outlined below:

- Three samples for the first week after SEE injection ceases, then
- One sample a week until the MPE wells are turned off, then
- Three samples a week for the first week after all extraction has ceased, then
- One sample a week until TTZ has reached half the target, then
- Once per month until the TTZ has returned to static/stable temperatures, or six months since SEE system shutdown.

Samples for laboratory analysis will follow the same set of procedures as those that were in place for active SEE operation.

If it is found during the SVP baseline evaluation or SEE operation that additional SVP locations are needed, discussion will be initiated with IEPA.

[3] Field screening result increases over baseline will initially be repeated for confirmation.
[4] A location is deemed “clean” when field screening results for CH4 = 0.0ppm, LEL = 0%, and THC = 0.0 ppm

7. Steam Effectiveness Plan

To evaluate the effectiveness of the PWY SEE system AECOM and SOPUS are proposing a post-SEE sampling plan for the PWY TTZs. As explained in **Section 6** PWY monitoring points (VMPs, SVEs, and MWs) that are constructed of PVC will have to be abandoned prior to the operation of the SEE system. The temperature profile of the subsurface within the TTZ footprint will exceed the temperature rating of the materials previously used for the construction of the following locations: MW-8, VMP-29, VMP-30, SVE-2, SVE-21 through SVE-24, SVE-26, and SVE-27. **Figure 4** depicts the current location of the above-mentioned monitoring locations within the bounds and periphery of the PWY. Due to safety concerns and the temperatures that are expected during SEE operations, AECOM and SOPUS propose that the reinstallation of MW-8, VMP-29 and VMP-30 take place after the SEE system has been shut down and subsurface conditions have cooled and stabilized. SEE effectiveness, or confirmation, sampling will only occur after subsurface conditions have stabilized to avoid potential safety concerns. It is estimated that the installation and sampling efforts outlined below will occur approximately six months after the SEE system has been shut down.

Consistent with the May 2016 Groundwater Management Zone proposal (AECOM, 2016), the RCRA Part B Post-Closure Hazardous Waste Permit most recently modified December 20, 2019, the RCRA Part B Post-Closure Hazardous Waste Permit renewal application submitted in April of 2020 (AECOM, 2020), and various correspondence between SOPUS and the IEPA, AECOM proposes to reinstall MW-8 (as the new MW-8A) screened across the water level observed at the time of installation and within approximately 10 feet of the original location. New monitoring wells (MW-29A and MW-29B) are proposed to be installed along the eastern edge of the PWY, near to the location of predesign boring PD-07. The purpose of the proposed locations is to provide further delineation between the WRR, the village of Roxana, and the Public Works Yard. Two B-level monitoring wells are also proposed in general accordance with Condition 4.b in Attachment A of the IEPA December 20, 2019 letter with modified Permit, Condition V.D.3 of the December 20, 2019 modified Permit, and the *Response to Condition 4.b in Attachment A and Condition V.D.3 of the 12/20/2019 IEPA Letter with Modified Permit dated* October 12, 2020 (**Attachment C**). These new B-level locations (MW-8B and MW-29B) are proposed to be installed adjacent to the MW-8 replacement (MW-8A), and a new MW-29A location. The location of the above-mentioned wells can be seen on **Figure 4.** The proposed wells will provide further delineation to the west of the WRR North Property and will be used to intercept potential groundwater contamination observed in the B-Level well, P-93B. The B-level wells will be screened across the zone of greatest impact, based on the groundwater profiling described below.

During the installation of the monitoring wells outlined above, AECOM proposes to collect approximately three to five soil samples from each, and sample intervals will be similar to those of nearby borings sampled during the 2019 Predesign Investigation. Specific sample depths from the 2019 Predesign Investigation can be found in **Table 1** and **Table 2** of **Attachment A**). In addition to soil sampling, groundwater profiling will be conducted prior to the installation of the monitoring wells. Groundwater profiling will be conducted at approximately 10-foot intervals once contact to the water table is made. Sampled depths will be similar to those sampled during the 2019 investigation (see **Table 3** and **Table 4** of **Attachment A** for exact sample depths). As the MW-8A(B) location is equidistant from three 2019 investigation borings (PD-01, PD-04, and PD-05), the results from groundwater profiling and soil sampling with be compared to results from those three locations accordingly. The results from groundwater profiling and soil sampling from the MW-29A(B) locations will be compared to the 2019 investigation boring PD-07. **Figure 4** depicts the locations of the monitoring wells and predesign borings (PD) outlined above. Borings for MW-29A(B) and MW-8A(B) wells will be drilled to a depth so that groundwater profiling and soil sampling can be performed to similar vertical extents of those borings sampled in the 2019 investigation, and to ensure vertical delineation.

To assess site wide SEE effectiveness, AECOM and SOPUS propose to sample groundwater from the multiphase extraction wells (MPEs) used during SEE operation, which will be screened from 24 to 57 feet bgs, which will encompass the targeted treatment interval (46-53 feet bgs). In addition to MW-8A and MW-8B, three MPEs within the Area A treatment zone will be selected for groundwater sampling. The three samples will be collected from the northern, eastern, and southern peripheries of the Area A TTZ, and MW-8A and MW-8B will add analytical data for the western edge of Area A. In addition to MW-29A(B), two MPEs within the Area B footprint will be selected for analytical sampling, one from both the northern and southern extent of the Area B treatment zone.

Samples for soil will be analyzed for the same suite of constituents that have previously been analyzed for in historic sampling efforts within the Village of Roxana. These samples will be analyzed for USEPA Method 8260B Volatile Organic Compounds (VOCs) and Method 8270D Semivolatile Organic Compounds (GC/MS), including Polynuclear Aromatic Hydrocarbons (PAHs). Samples collected for groundwater will be analyzed for the same suite of constituents that the current Roxana Quarterly sampling program adheres to. Groundwater will be sampled for VOCs via USEPA Methods 8260B and 8011, for SVOCs via USEPA Method 8270D, and for Polycyclic Aromatic Hydrocarbons (PAHs) via USEPA Method 8270D Low Level (LL). USEPA Method 8011 will be used for select VOCs (1,2-dibromoethane and 1,2-dibromo-3-chloropropane) in order to achieve lower reporting limits as well as adhere to the current version of the Part B RCRA Post-Closure Hazardous Waste Permit (Permit) for the Site.

Based upon the results observed during the effectiveness sampling outlined above, additional soil sampling and/or groundwater profiling locations may be completed or proposed within the Comprehensive SEE Effectiveness Report. The effectiveness of the SEE system will be determined by comparing the results from the effectiveness sampling outlined above with results from the 2019 Predesign Investigation sampling effort. A significant reduction in contamination (benzene) is expected. The effectiveness of the proposed SEE system will be further quantified in the Comprehensive SEE Effectiveness Report. Upon completion of soil sampling and groundwater profiling, the new groundwater monitoring wells will be installed, developed. The new groundwater monitoring wells will also be incorporated into the current Roxana Interim Groundwater Monitoring Program and sampled quarterly.

8. Projected Operations and Monitoring Program Modifications

8.1 SVE Operations

Current SVE operations in the PWY will cease with the onset of SEE, due to integrity issues with the construction of existing SVE wells. SVE is planned for continued operation near the 4th street and Chaffer Avenue area concurrent with SEE in the PWY, per the October 1, 2020 IEPA letter. MPE wells will potentially be repurposed as a new SVE leg at the PWY for the existing RTO. These proposed changes will affect the SVE system operations in the PWY originally approved by the IEPA in a letter dated July 22nd, 2013 (IEPA, 2013). Based upon the results observed during and after SEE operation, a proposal for SVE shutdown and rebound monitoring may be submitted post-SEE shutdown, as discussed in the *Response to TACO Tier 3 Demonstration 10/1/2020 IEPA Comment Letter*.

8.2 Groundwater and Soil Vapor Monitoring Programs

Monitoring of the following groundwater monitoring wells and vapor monitoring points will cease during SEE operations: MW-07, MW-08, VMP-29, and VMP-30. All but MW-07 will be abandoned prior to SEE operations as they are all constructed of PVC and will be subject to increased subsurface temperatures per final design specifications outlined in **Attachment B**. Reinstallation and sampling will continue post-SEE, as outlined in **Section 6** and **7**. Proposed changes will affect the quarterly soil vapor and groundwater monitoring programs as directed in the August 5th, 2010 IEPA letter (IEPA, 2010) and subsequent correspondences.

9. Permits and Notifications

Various permits and notifications will be required for construction and operation of the SEE system. The following table describes the expected requirements and the relevant utility, municipality, and/or regulatory authority for each associated SEE item.

Item	Expected Permit/Notification Requirements
Drilling/SEE Point Installations	Any well installation permits and/or notifications required by IEPA will be obtained prior to installing SEE points (steam injection wells, MPE wells, and temperature sensors). AECOM is currently reviewing the Underground Injection Control (UIC) rules for potential applicability for the steam injection points. Groundwater monitoring well installations will be conducted in accordance with relevant IEPA, IDPH and Permit requirements.
Air Discharge	Treated vapors from SEE operations are planned for discharge to atmosphere under the October 5, 2021 Federally Enforceable State Operating Permit (FESOP), Application No.: 12040025. for the SVE system's RTO. A construction permit application for the steam boiler will be submitted. Other SEE equipment will be incorporated into the existing FESOP with a request for modification. AECOM and Shell have already been in contact with IEPA regarding construction permits and FESOP modification.
Wastewater Discharge	Treated wastewater from SEE operations is planned for discharge to the Village of Roxana publicly owned treatment works (POTW). A Contained-In Determination followed by a Water Pollution Control Permit Application are currently being drafted for submittal and approval by IEPA. AECOM and SOPUS have already been in contact with the Village of Roxana regarding treated water discharge.
Electrical Power Drop	Ameren Illinois will provide electrical power required for SEE operations. Any required permits will be obtained in advance.
Steam Boiler Fuel	Natural gas from Ameren Illinois is the preferred fuel for steam boiler operations. Any required permits for the natural gas connection will be obtained in advance.
Steam Boiler Feed Water	Connection to the Village of Roxana municipal water supply is planned for the steam boiler. Any required permits for the connection will be obtained in advance. AECOM and SOPUS have already been in contact with the Village of Roxana regarding potable water needs.
SEE Point Abandonment	SEE point abandonment at the completion of the remedy will be conducted in accordance with relevant IEPA and IDPH requirements. Any required permits/notifications will be obtained.

Inquiry into permit needs regarding the above table are underway at the time of this submittal. AECOM has been in contact with the local municipality (Village of Roxana) regarding:

1. Discharge of treated wastewater to the local POTW and,
2. Potable water supply availability for SEE steam boiler operation.

Upon approval of this workplan, additional inquiries will commence to resolve the items listed in the table above.

10. Reporting

Upon successful SEE construction and installation, an SEE Construction Completion report will be submitted to the agency. Contents will include, but are not limited to:

1. Technical Specifications
2. Deviations from Final SEE Design
3. Description of Construction Activities
4. Detailed As-Built Drawings
5. Quality Assurance/Quality Control
6. Boring logs
7. Baseline field screening and analytical measures for the proposed Vapor Monitoring Program

After successful SEE shutdown and completion of the Steam Effectiveness Plan, reporting materials will be prepared for submittal to the IEPA. Contents will include, but are not limited to:

1. Summary of SEE operations
2. SEE mass removal calculations,
3. Results from soil sampling and groundwater profiling
4. Evaluation of SEE success and/or the need for additional confirmation sampling efforts.

The specific number of reports and content will be determined at a later time.

1. Introduction and Objectives

On behalf of Equilon Enterprises LLC, dba Shell Oil Products US (SOPUS), AECOM Technical Services, Inc. (AECOM) prepared this Predesign Investigation Report (Report) for the Village of Roxana (Village) Public Works Yard (PWY) site. The Predesign Investigation focused on collection of data to refine the Conceptual Site Model (CSM) for the PWY. Additionally, data collected will be used to evaluate the use of thermal treatment as a potential remedial technology at the site. This report includes supporting tables, figures and appendices that follow the text. The report also contains embedded images, charts and tables that are not numbered.

The PWY is bounded on the west and north by Illinois Route 111/Old Edwardsville Road and East Eighth Street, respectively. There is a railroad corridor along the southern boundary and the Phillips 66 Wood River Refinery (WRR) forms the eastern boundary (**Figure 1)**. The property occupies approximately 2.4 acres, approximately 0.4 acres of which is covered or obstructed by buildings or structures. Topographically, the western and southern portions of the PWY are at a lower elevation relative to the northeastern portion of the PWY. This relief across the PWY is approximately 13 feet. The PWY is infrequently used by the Village for vehicle maintenance and storage. The PWY is also the location of the Village's former wastewater treatment plant (WWTP). In-ground concrete tanks associated with the WWTP continue to be used to help manage stormwater. Most of the PWY is enclosed by a chain link fence. The aerial image below shows the location of the PWY with respect to surrounding features.

SOPUS has conducted several subsurface investigations at the PWY beginning in 2006 (URS, 2007), and quarterly groundwater monitoring began in 2010. These investigations indicate dissolved phase groundwater benzene concentrations on the order of hundreds to thousands of milligrams per liter (mg/L). In 2011, SOPUS constructed a soil vapor extraction (SVE) system on the adjoining Phillips 66 refinery which includes a header-line connecting to six extraction wells at the PWY. There are also eight vapor monitoring points (VMPs) at the PWY. The SVE system has operated at the PWY since late 2012. Soil vapor data for the PWY demonstrates the shallow and intermediate zones have been remediated. Soil gas concentrations at deeper depths have also decreased over time but may remain at depth in certain areas partly due to fluctuating groundwater conditions and submerged impact.

.

2. Investigation Approach

SOPUS evaluated several potential remedial alternatives to address petroleum impacts in groundwater at the PWY and of these, in-situ thermal treatment, and in particular Steam Enhanced Extraction (SEE), appears most promising at this time. The following site attributes affect SEE and served to focus the predesign investigation:

- Constituents of Potential Concern (COPCs), including Mass
- Debris, Obstructions and Preferential Pathways
- Hydraulic Conductivity
- Anisotropy
- Hydraulic Gradient/Depth to Groundwater
- Depth of Impact Relative to Groundwater Potentiometric Surface
- Stratigraphy
- Water Quality (for reinjection)

The investigative approach used four exploratory techniques:

1. Laser Induced Fluorescence (LIF), enhanced by an injected dye (dyeLIF), which causes solvent-like non-aqueous phase liquids (NAPL) like benzene to fluoresce differently than other hydrocarbons. This allowed for real-time identification of NAPL in the subsurface pore space.

2. Cone Penetration Testing (CPT), utilizing direct-push technologies, allowed for real-time identification of lithology and other soil properties that were used to help determine where to collect soil and groundwater samples.

3. Collection and analysis of soil samples using conventional drilling techniques for comparison with the dyeLIF results, provided quantification of analytical concentrations and determined certain physical soil properties.

4. Groundwater profiling using CPT for collection of depth-discrete groundwater samples for dissolved phase characterization vertically and horizontally across the PWY.

The approach allowed for information to be interpreted in the field and for additional locations to be added based on those results. The planned work was described in the *Predesign Investigation Workplan* (Workplan) dated May 2019.

The PWY is Village property, and the site work was performed under the access agreement between SOPUS and the Village dated September 17, 2012.

3. Field Investigation Activities

Field activities were conducted in June and July 2019 by AECOM, supported by the following site subcontractors:

- Roberts Environmental Drilling, Inc. (REDI) – Utility locate, utility clearance, and soil borings
- Walker-Hill Environmental (WHE) – CPT and groundwater profiling
- Dakota Technologies – DyeLIF, in conjunction with WHE's CPT rig.
- Juneau Associates – Surveying
- Environmental Management Alternatives (EMA) and Heritage Environmental Services – Waste management and disposal

Investigation locations were surveyed for horizontal and vertical control and added to the base map for the area after the completion of field activities **(Figure 2).**

The following sections describe the investigation activities as completed.

3.1 Pre-field Activities

The investigative locations were initially presented in the Workplan and refined based on available information on underground and aboveground utilities. Locations were distributed across the PWY with a spacing of approximately 40 to 60 feet. The investigation locations are shown on **Figure 2**. These locations were marked in the field with marking paint and pin flags. The locations were also reviewed with Village of Roxana representatives and Illinois' Joint Utility Locating Information for Excavators (JULIE) (SOP 5 – *Utility Clearance Procedures*).

A 3rd party private locate was performed for locations PD-01 to PD-11 on June 3, 2019 and locations PD-12 through PD-19[1] on June 17, 2019. This was conducted to identify potential obstructions and included the use of Ground Penetrating Radar, and Electro-Magnetic locating. The locator checked a 10-foot by 10-foot square area centered on each proposed location. Locations proposed on the east side of the PWY (PD-3 and PD-7) were relocated due to a subsurface underground pipeline and the minimum 25 foot set back distance requirement regarding that pipeline. Additionally, borings PD-01 and PD-05 were relocated based on underground piping for the SVE system, underground power lines and water transfer lines, that were more accurately identified after initial boring placement.

3.2 Intrusive Activities

3.2.1 Air-Knifing

An air-vacuum system was used to advance air-knife holes to assess the presence of utility lines or other obstructions at each planned investigative location (SOP-5 *Utility Clearance Procedures*). Air knife holes were cleared to depths of 10 feet below ground surface (bgs) and approximately 12 inches diameter for locations planned for soil drilling. Locations planned for CPT probing were air-knifed to 10 feet in depth and approximately 10 inches in diameter.

Three holes were air-knifed at each of the first planned locations (PD-01 through PD-11), for the CPT/DyeLIF, groundwater profiling, and soil borings. Locations PD-12 through PD-19 were added during the field program and each had two air knife holes, based on projected further investigation using only CPT methods. One location (PD-01) had an additional hole air-knifed due to refusal during CPT drilling and one location (PD-12) also had an additional hole air-knifed due to re-sampling being required[2].

AECOM collected grab samples at approximately two-foot intervals using a hand auger through the borehole clearance depth of 10 feet. Following hand auger sampling, each borehole was cleared using an air knife to a depth of 10 feet and width of approximately 10 to 12 inches (SOP-13 *Hand Auger Sampling*). A Photoionization Detector (PID) was

[1] PD-18 was proposed during the work but was not performed due to underground and overhead utilities.
[2] The sample shipment to the laboratory was delayed in transit; samples were recollected.

used for field screening and visual classification for soil logging (SOP-14 *Soil Headspace Screening* and SOP-17 *Soil Logging*). Air-knife holes were back-filled with sand when completed.

3.2.2 CPT/DyeLIF

CPT equipped with dyeLIF was performed by WHE and Dakota Technologies between June 10 and 20, 2019 at the locations shown on **Figure 2** (PD-01 – PD-19).

CPT technology, mounted on a tracked vehicle, hydraulically pushes a cone tip into the subsurface soil at a controlled rate of 1.5 to 2.5 cm/s. Total penetration resistance, friction, and pore water pressure are measured and integrated using software within the CPT unit. The CPT process follows the ASTM Standard D-3441 and includes correlating the soil properties to soil type; this information is included on CPT logs. Certain properties and information are also used to estimate hydraulic conductivity (K) and this information is discussed in Section 4.1.

DyeLIF technology utilizes the injection of water-insoluble dye which fluoresces very weakly and with short lifetimes while in the crystalline phase. When the dye comes in to contact with non-aqueous phase liquids it rapidly solvates into the NAPL, where it fluoresces intensely with a color shift and prolonged lifetimes. This change in solvation is monitored with laser-induced fluorescence sensing through a sapphire window attached to the side of the CPT rod near the rod's tip. The fluorescence collected from outside the sapphire window is brought to the surface where it is converted into a waveform (a combined measurement of intensity, color, and lifetime) by the LIF hardware. Dakota's software program ultimately calculates a response percentage. An increase in fluorescence strength and color shift ("blue shift") are indicative of a target response (benzene and/or other NAPLs are encountered). The more dramatic increases in the response intensity and blue-shifts, the higher the confidence that an effective dye-solvating NAPL like benzene has been encountered by the probe. The response to benzene-like NAPLs is faster and higher than other petroleum NAPLs such as gasoline, diesel, etc., which provide a less intense response (typically by an order of magnitude in lab testing). LIF logs were produced in the field and used to help guide subsequent locations.

Additional locations PD-12 through PD-19 were added to further refine the extent of impact. The process at these locations followed the same utility clearance/air-knife process as described previously.

CPT/DyeLIF borings (PD-01 through PD-19) extended to depths ranging from approximately 40 to 74 feet bgs, which is approximately 10 feet below the lower limit of dyeLIF response or to refusal as determined by the pressure generated on the cone tip prior to causing damage to equipment. DyeLIF logs are included in **Appendix A.**

Refusal was encountered in seven of the CPT/dyeLIF borings (PD-4, PD-6, PD-7, PD-11, PD-14, PD-17, and PD-19). In most borings, this refusal was consistent with dense sands which, when encountered, could not be penetrated by the equipment used.

Upon completion, borings were grouted with Type I cement grout placed via tremie pipe (SOP-12 *Grouting Procedures*). CPT logs are included in **Appendix B.**

3.2.3 Soil Borings

Soil borings were advanced at locations adjacent to the dyeLIF borings with observed NAPL response to collect samples for laboratory analysis and physical properties testing. Drilling occurred between June 11 and 23, 2019 and included 13 borings. Borings were advanced using 4-1/4-inch inside diameter (ID) hollow stem auger (HSA) and mud rotary advancement techniques using a 3-7/8-inch tricone bit. Borings were typically advanced with augers to depths ranging from 30 to 40 feet bgs then continued using mud rotary drilling. These depths were determined based on the observed groundwater depth during drilling and subsurface material types. The mud rotary process uses a bentonite and water mixture to keep the borehole open. Boreholes were started with projected depths based on results from previously advanced dyeLIF locations. A majority of the borings were terminated when soil samples did not display visual evidence of impact or odors and field screening (PID) results were less than approximately 25 ppm for a distance of approximately 5 to 10 feet. Final borehole depths ranged from 62 to 72 feet bgs.

The borings were continuously sampled using 24-inch-long split-spoon samplers, sampled back to back the length of the boring, starting at 10 feet bgs. Sampling was performed using a 140-pound hammer dropped from 30 inches to push the sampler into the formation. The number of hammer strikes required to achieve six inches of soil penetration

are recorded as blow counts. Blow counts are used to determine density of soils during sampling; this information is included on the boring logs. Soils in the sampler were logged by a qualified field scientist in accordance with the Unified Soil Classification System (USCS), visually evaluated for evidence of impact and screened in the field using a PID (SOP-14 *Soil Headspace Screening*). The field scientist noted soil attributes such as color, particle size, consistency, moisture content, structure, plasticity, odor (if obvious), and organic content (if visible) (SOP-17 *Soil Logging*). Soil boring logs are included in **Appendix C.**

Selected samples (based on visual observations and PID readings) were field tested using Sudan IV soil test kits which qualitatively identify hydrocarbons as a rough indicator of potential NAPL presence (Sudan results are included on the boring logs)**.**

Selected soil samples were collected for analytical testing. Samples retained for testing were biased to focus on intervals with evidence of impact, based on dyeLIF response, PID, Sudan results and visual indicators. Samples were also collected from above and below these zones to provide information on changes in composition. Commonly, 3 to 5 samples per boring were retained for analysis. Samples were analyzed for volatile and semivolatile organic compounds (VOCs and SVOCs), including polynuclear aromatic hydrocarbons (PAHs); refer to Section 3.6 for additional information.

Based on the Sudan IV soil test kits results, eleven[3] (11) soil samples suspected to contain NAPL were sent to the SOPUS Westhollow laboratory in Houston, TX for testing. The results are presented Section 4.2.1.

Soil samples for physical properties testing, including grain size and permeability, were collected from six borings. These samples were collected from locations across the PWY, and the following inset table indicates the location and sample depth. The samples represented a range from 33 to 60 feet bgs, which includes the interval of greatest dyeLIF response. Physical property samples were collected using a large diameter split-spoon sampler with acetate liners[4]. See Section 4.1 for additional information.

Boring ID	Sample Date	Sample Depth (ft)
PD-1	6/18/2019	51
PD-4	6/21/2019	33
	6/24/2019	60
PD-5	6/14/2019	45
	6/14/2019	57
PD-6	7/12/2019	41
PD-7	7/18/2019	43
	7/18/2019	53
PD-10	6/13/2019	44

Borings were grouted upon completion with Type I cement grout placed via tremie methods (SOP-12 *Grouting Procedures*).

3.3 Groundwater Profiling

Depth-discrete groundwater sampling was performed between June 25 and July 23, 2019. Samples were collected from separate CPT borings adjacent to the dyeLIF borings. Groundwater samples were collected at approximately 10-foot intervals or as dyeLIF results suggested concentrations may be indicative of NAPL.

[3] Nine (9) of these samples were collected from the same interval as samples sent to Test America for analytical testing.
[4] This resulted in a sample approximately 3-inches in diameter by 24-inches in length.

Samples were collected through the rods with a lead rod which retracted to expose a stainless-steel screen. Samples were obtained via low-flow techniques using tubing and an inertial pump or hand pump using a foot valve (SOP-42 *Groundwater Profiling*). Due to the small diameter rod and screen, groundwater levels could only be measured prior to and after purging and sampling. Samples were collected when the following parameters had stabilized[5]: pH, oxidation-reduction potential (ORP), dissolved oxygen (DO), temperature and specific conductivity. Most groundwater borings extended to a depth of approximately 70 feet bgs or CPT refusal based on subsurface conditions. Low flow groundwater sampling data sheets are included in **Appendix D**.

Groundwater samples were collected for analysis of VOCs and SVOCs, including PAHs. Six additional samples were collected from six locations distributed across the PWY for analysis of general water quality parameters: alkalinity, hardness, calcium, manganese, sodium, potassium, phosphate, chloride, nitrate, chlorine, ferrous iron, sulfate and total dissolved solids. These samples were collected from depths ranging from 35 to 70 feet bgs. Refer to Section 3.6 for additional groundwater sampling details.

Nineteen[6] (19) groundwater samples suspected to contain NAPL based on visual observations were sent to the SOPUS Westhollow laboratory in Houston, TX for testing. The results are presented in Section 4.2.2.

Borings were grouted upon completion with Type I cement grout placed via tremie methods (SOP-12 *Grouting Procedures*).

3.4 Health and Safety

Health and Safety during these investigation activities was governed by a site-specific Health and Safety Plan *(*HASP). Personal protective equipment (PPE) and monitoring equipment used are described in the HASP.

The 12 Life-Saving Rules (LSRs) are mandatory rules for working on any SOPUS property or site and they aim to help employees and contractors comply with company-wide rules covering the activities of highest safety risks. Additionally, for all work done for involving soil and groundwater the Safe System of Work (SSoW) was followed. Employees and subcontractors working on soil and groundwater projects for SOPUS completed LSR and SSoW Training and carry a copy of the training certificate with them when working on SOPUS sites.

Task hazard assessments (THA) were discussed and completed before starting work activities each day. The THA requires the worker to describe steps to reduce the risk, including specific hazards and mitigations to be addressed, protective equipment to be used, and controls to be implemented. If the hazard(s) cannot be successfully mitigated, the work is not allowed to proceed. Employees and visitors signed the THAs daily. Tasks performed were discussed, including driving to the site, parking, and walking as well as the hazards, associated risk, and appropriate controls for each step. THAs were reviewed in advance by AECOM project safety personnel for SOPUS Safety C.A.S.E. review.

Prior to beginning work, the management team conducted a pre-field meeting or call with subcontractors where last-minute scope of work and safety concerns were discussed.

During the drilling of boring PD-11, and in particular the interval from approximately 38 to 44 feet bgs, elevated PID readings were detected in the breathing zone. Work was stopped to assess the change in conditions. Work resumed using engineering controls. Air movers in the form of a vacuum fan was positioned at the boring hole with discharge lines situated 20 feet down-wind of the workers. Additionally, normal “push” fans were directed at the workers breathing zone to provide fresh air from up-wind sources. This allowed fresh air to be brought into the work zone and ensure vacuumed air could not return in case of wind direction change.

3.5 Decontamination

Field personnel and equipment underwent decontamination procedures for the health and safety of those present, to maintain sample integrity, and to minimize the potential for cross-contamination. A temporary decontamination area

[5] Stabilized readings are 3 consecutive readings (per specified parameter) at a constant calculated flow rate, after 3 calculated flow through cell volumes have been purged.
[6] Seventeen (17) of these samples were collected from the same interval as samples sent to Test America for analytical testing Data are included in Table 3 and 4.

was established in the southeast corner of the PWY. Non-dedicated or non-expendable equipment (e.g., soil samplers) were decontaminated prior to the collection of each analytical sample by spraying with Liquinox® and distilled water (SOP-4 *Decontamination*). Decontamination fluids were collected and containerized for proper management and disposal. Large equipment (e.g., drill rig augers) was cleaned with a high-pressure cold-water wash at the decontamination pad. A rinsate sample was collected for analysis to assess the adequacy of cold-water pressure wash cleaning. The results indicated the decontamination procedures were satisfactory. Additional decontamination details are further described in the HASP.

3.6 Investigation Derived Waste

Investigation derived waste (IDW) included investigation spoils (e.g., soil from air knife and auger borings, drilling mud), decontamination water, purge water, groundwater tubing, PPE and expendable materials (e.g., gloves, tubing, etc.).

Soils generated from borehole clearing (air knife) and hollow stem auger drilling, zero to approximately 30 feet in depth, were containerized for disposal using 15-cubic yard covered and lined roll-off containers. A composite sample was collected from the containerized soils and sent to Teklab of Collinsville, IL. (Teklab) for characterization and to facilitate proper disposal. Soils were characterized as non-hazardous and were disposed at the Waste Management Milam RDF facility in East St. Louis, Illinois.

Drilling mud was containerized for disposal using 55-gallon steel drums. A composite sample was sent to Heritage to confirm characterization and facilitate proper disposal. Drilling mud was characterized as hazardous and disposed at the Heritage Environmental incinerator in East Liverpool, Ohio.

Decontamination water was containerized for disposal using 55-gallon steel drums. A composite sample of the decontamination water was collected and sent to Teklab to confirm characterization and facilitate proper disposal. Decontamination water was characterized as non-hazardous and was disposed at the Heritage Environmental facility in Indianapolis, Indiana.

Purge water was containerized for disposal using 55-gallon steel drums. Generator knowledge was used for characterization and to facilitate proper disposal. Purge water was characterized as hazardous and was disposed at the Heritage Environmental facility in Indianapolis, Indiana.

Tubing used during groundwater profiling to collect groundwater samples was containerized for disposal using 55-gallon steel drums. Generator knowledge was used for characterization and to facilitate proper disposal. Tubing was characterized as hazardous and was disposed at the Heritage Environmental facility in Indianapolis, Indiana.

The PPE and expendable materials having a low probability of impact were collected in trash bags and disposed with municipal waste. The PPE and expendable materials potentially impacted were containerized with the groundwater tubing for disposal.

Containers were staged on the PWY to meet storage requirements of SOPUS' Residual Management Program (RMP). Wastes were managed in accordance with SOPUS' RMP guidance as well as state and federal regulations.

3.7 QA/QC, Sample Control and Laboratory Testing and Data Review and Management

Quality assurance samples in the form of duplicates (DUP), equipment blanks (EB), trip blanks, and matrix spike and matrix spike duplicates (MS/MSD) were collected for soil and groundwater samples. Duplicates of selected samples were collected and analyzed from 10 percent of the investigative samples to check for sampling and analytical reproducibility. MS/MSD samples were collected and analyzed from 5 percent of the investigative samples to evaluate the effect of the sample matrix on the accuracy of the analysis. Trip blanks were collected and analyzed daily to assess the potential for VOC cross-contamination of samples during shipment to the laboratory. The trip blank consisted of one or more VOA vials prepared by the laboratory, transported to the field, and shipped with the other samples to the laboratory. The trip blanks were not opened in the field. Equipment blanks were collected and analyzed from 10 percent of the investigative samples where non-dedicated or non-expendable equipment was used. In total 5

MS/MSDs, 9 EBs, and 9 DUPs were collected for groundwater sampling QA/QC. Additionally, 3 MS/MSDs 5 EBs and 5 DUPs were collected for soil sampling QA/QC. Refer to SOP-23 *QA Samples* for additional information.

Personnel conducting the sampling wore clean, disposable protective gloves. Sample containers were labeled with a sample ID number, site name, sampler initials, sample date and time, sample preservative, and the parameters to be analyzed. After sample collection, the samples were logged on a chain-of-custody (COC) form, packaged to prevent damage during shipment, and cooled to ≤4°C (except soil physical property samples, which were not shipped on ice). The samples were then delivered, under the proper COC documentation, to the appropriate laboratory via delivery or courier service. Samples sent to the SOPUS Westhollow laboratory were shipped as Department of Transportation (DOT) hazardous materials following applicable packing and shipping procedures. Refer to SOP 24-*Sample Classification, Packaging, and Shipping (DOT)*, SOP 25-*Sample Containers, Preservation, and Holding Times* and SOP 26-*Sample Control and Custody Procedures.*

Soil and groundwater samples were analyzed for USEPA Method 8260B Volatile Organic Compounds (VOCs) and Method 8270D Semivolatile Organic Compounds (SVOCs), including Polynuclear Aromatic Hydrocarbons (PAHs) that are included in the reporting lists for the Roxana Interim Groundwater Monitoring Program, plus tentatively identified compounds (TICs). The primary testing laboratory was TestAmerica of Pensacola FL. Soil and groundwater samples from an initial group of locations (PD-1, -5, -10) were analyzed on an expedited basis (24 hour) by Teklab to provide results for comparison with the dyeLIF results. Water quality samples were sent to TestAmerica of Chicago.

Soil samples for physical properties testing were sent to TerraSense Inc. in Totowa NJ for grain size (ASTM D-422) and permeability (ASTM D-5084).

Laboratory data were provided in electronic form, and analytical data were independently reviewed and qualified by AECOM, consistent with other analytical data collected for the Roxana project. One hundred percent of the data were subjected to a data quality review. Evaluation of the data followed procedures outlined in the USEPA National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017). Specific criteria reviewed included sample receipt condition and holding times, method blanks, surrogate spike recoveries, laboratory control samples, results reported from dilutions, and field duplicate results. The laboratory assigned data qualifiers on the basis of their quality control or to indicate sample analysis information (e.g., dilutions). Data qualifiers were also added by AECOM, as appropriate, and included on the data tables and laboratory result pages. Based on laboratory control sample (LCS), MS/MSD, surrogate, holding time, and field duplicate criteria, the analytical results reported were accepted for their intended use. Laboratory data reviews and reports are included in **Appendix E.**

Field data and documentation collected as part of this scope of work became part of the project file. AECOM maintains the files for the PWY and the database management system.

The following documentation was completed and supplements the COC records:

- Field logbooks.
- Air knife and soil boring logs.
- Field sample collection data (either forms and/or via electronic Toughpad®).
- Safety documentation.
- Air monitoring and calibration records.

Field and analytical data, (e.g., lithology, dyeLIF, concentration), were compiled and loaded into an Environmental Visualization Systems (EVS) model to facilitate interpretation.

4. Conceptual Site Model Data Assessment

This update to the existing conceptual site model includes information from the Predesign Investigation integrated with historical site data.

4.1 Site Specific Geology

The subsurface conditions in the PWY area generally consist of the following materials from the ground surface down:

- Fill – The fill consists mainly of clay with varying amounts of gravel, cinders, etc., and ranges in thickness from 0 to approximately 5 feet thick and is located in sporadic locations across the site.
- Silty Clay – A silty clay interval is thickest and underlies portions of the southwest area of the site. This interval's thickness ranges from approximately 3 to 15 feet. In the eastern portion of the PWY it is typically less than 5 feet thick.
- Sand – The sand underlies the silty clay, is primarily fine to medium grained to a depth of approximately 60 feet below ground surface [bgs]) then becomes medium to coarse grained. The sand extends to the depths explored (93 feet)[7]. There are occasional silty zones in the sand, but these appear to be relatively thin (inches thick) and are not laterally continuous.

Subsurface cross-sections were developed for five views through the PWY and are shown on **Figures 3A**, **4A**, **5A**, **6A** and **7A**.

Sand grain size across the PWY varies; a majority of subsurface material to a depth of approximately 70 feet is described as fine to medium grained sand with some silty sand. Approximately half of the borings noted occasional coarse-grained sand at varying depths.

Grain size analysis was performed on the soil samples sent for physical properties testing and the percent by size is shown in the inset table below.

Boring	PD-01	PD-04		PD-05		PD-06	PD-07		PD-10
Depth (bgs)	51	33	60	45	57	41	43	53	44
% SAND	93.0	98.2	98.6	95.7	96.2	98.4	97.3	96.0	96.3
% Coarse SAND	0.0	0.1	0.1	0.1	1.9	0.1	0.1	0.2	0.7
% Medium SAND	8.5	43.8	85.3	15.3	54.1	41.1	29.3	9.6	19.9
% Fine SAND	84.5	54.3	13.2	80.3	40.2	57.2	67.9	86.2	75.7
% FINES (Silts and Clays)	7.0	1.5	1.4	4.3	3.7	1.6	2.7	4.0	3.7

[7] Soil sampling performed in December 2012 (URS, 2013).

Horizontal and vertical permeability tests were conducted on nine samples from 6 borings distributed across the PWY at depths between 33 and 60 feet bgs. The results are presented below.

Well ID	Sample Depths (bgs)	Lithology	Vertical Hydraulic Conductivity (K, cm/s)	Horizontal Hydraulic Conductivity (K, cm/s)	Estimated K-value from DyeLIF (cm/s)
PD-1	51	F.-M. Grained Sand	3.0×10^{-5}	2.9×10^{-5}	4×10^{-7} to 3.5×10^{-4}
PD-4	33	F.-C. Grained Sand	1.0×10^{-2}	1.0×10^{-2}	1.0×10^{-2} to 1.4×10^{-2}
	60	F.-C. Grained Sand	2.9×10^{-3}	2.4×10^{-2}	NA*
PD-5	45	F.-M. Grained Sand	6.5×10^{-5}	1.0×10^{-2}	4×10^{-7} to 1.0×10^{-3}
	57	F.-M. Grained Sand	2.1×10^{-4}	5.2×10^{-3}	4×10^{-7} to 4.5×10^{-3}
PD-6	40	F. Grained Sand	2.8×10^{-2}	2.3×10^{-2}	1.0×10^{-2} to 1.4×10^{-2}
PD-7	43	F. Grained Sand	1.9×10^{-3}	1.5×10^{-2}	1.4×10^{-3} to 1.0×10^{-2}
	53	F. Grained Sand	4.6×10^{-5}	2.0×10^{-3}	4×10^{-7} to 1.0×10^{-2}
PD-10	44	F.-M. Grained Sand	1.6×10^{-3}	2.2×10^{-2}	1.5×10^{-2} to 1.9×10^{-2}

The average horizontal hydraulic conductivity is 1.2×10^{-2} cm/sec and the average vertical hydraulic conductivity is 5.0×10^{-3} cm/sec. This represents an anisotropy ratio (horizontal to vertical) of 2.4. The horizontal laboratory hydraulic conductivities are within the range of conductivities estimated by the dyeLIF calculation.

Refer to **Appendix F** for the physical properties test results.

4.2 Presentation of Analytical Results

4.2.1 Soil

The soil samples from this investigation (41 investigative samples) were analyzed for compounds in the Roxana Interim Groundwater Monitoring Program. The results are included in **Table 1** (VOC detections) and **Table 2** (SVOC detections). A total of 142 VOCs and SVOCs were analyzed, of those, 44 different analytes were detected (refer to table below). Of these, benzene is the major component, being detected in 95% of the samples (39 of 41) at an average concentration of 1,298 mg/kg. As mentioned previously, the soil samples retained for analysis were generally biased to more impacted intervals. The next most commonly detected compound is 1-methylnaphthalene and it was detected in 85% of the samples with an average concentration of 1.73 mg/kg.

Chemical	% Detected	Average Concentration (mg/kg)
Benzene	95%	1,298
1-Methylnaphthalene	85%	1.73
2-Methylnaphthalene	83%	2.71
Phenanthrene	73%	2.32
Ethylbenzene	66%	14.1
Pyrene	66%	0.857
1,2,4-Trimethylbenzene	61%	29.6
Fluoranthene	54%	0.119
m,p-Xylenes	51%	28.8
Phenol	51%	0.197
Benzo(a)pyrene	49%	0.215
Fluorene	49%	0.218
Toluene	49%	2.14
Xylenes (total)	49%	35.2
n-Propylbenzene	46%	4.98
Benzo(g,h,i)perylene	41%	0.031
1,3,5-Trimethylbenzene	39%	7.73
Benzo(a)anthracene	39%	0.186
Anthracene	37%	0.163

Notes: 1) % Detected represents the number of samples with detections divided by the total number of samples. 2) Concentrations noted as 0.000 indicates a rounded average concentration.

The modeled benzene results for soil samples are shown in cross section view in **Figures 3B**, **4B**, **5B**, **6B**, and **7B. Figure 8** shows the distribution of soil benzene results in plan view. For a complete list of soil detections refer to **Table 1**(VOCs) and **Table 2**(SVOCs). Refer to **Appendix G** for soil VOC TICs and SVOC TICs. Several compounds were tentatively identified during the TIC search. Of these, the vast majority were only detected in a small percentage of samples and at relatively lower concentrations.

The SOPUS Westhollow laboratory performed additional analytical testing on soil samples which had positive Sudan tests; results were non-detect for NAPL in the samples. SOPUS Westhollow soil analysis results can be found in **Appendix I.**

4.2.2 Groundwater

The groundwater samples from this investigation (81 investigative samples) were analyzed for compounds in the Roxana Interim Groundwater Monitoring Program. The results are included in **Table 3** (VOC results) and **Table 4** (SVOC results). A total of 142 VOCs and SVOCs were analyzed, of those, 49 different analytes were detected (refer to table below). Of these, benzene is the major component, being detected in 98% of the samples (79 of 81), at an average concentration of 420 mg/L. Note that, in contrast to soil samples, groundwater samples were collected from throughout the length of the borings. As such, the average concentrations shown in the table also include lower concentration results. The next most commonly detected compound is 1-methylnaphthalene, and it was detected in 88% of the samples, at an average concentration of 0.025 mg/L.

Chemical	% Detected	Average Concentration (mg/L)
Benzene	98%	420
1-Methylnaphthalene	88%	0.025
2-Methylnaphthalene	86%	0.034
Toluene	59%	0.269
Phenol	54%	0.064
Ethylbenzene	53%	0.265

Notes: 1) % Detected represents the number of samples with detections divided by the total number of samples. 2) Concentrations noted as 0.000 indicates a rounded average concentration.

The modeled benzene results for groundwater samples are shown in cross section view in **Figures 3C**, **4C**, **5C**, **6C**, and **7C. Figure 9** shows the distribution of groundwater benzene results in plan view. For a complete list of soil detections refer to **Table 3** (VOCs) and **Table 4** (SVOCs). Refer to **Appendix H** for groundwater VOC TICs and SVOC TICs. Several compounds were tentatively identified during the TIC search. Of these, the vast majority were only detected in a small percentage of samples and at relatively low concentrations.

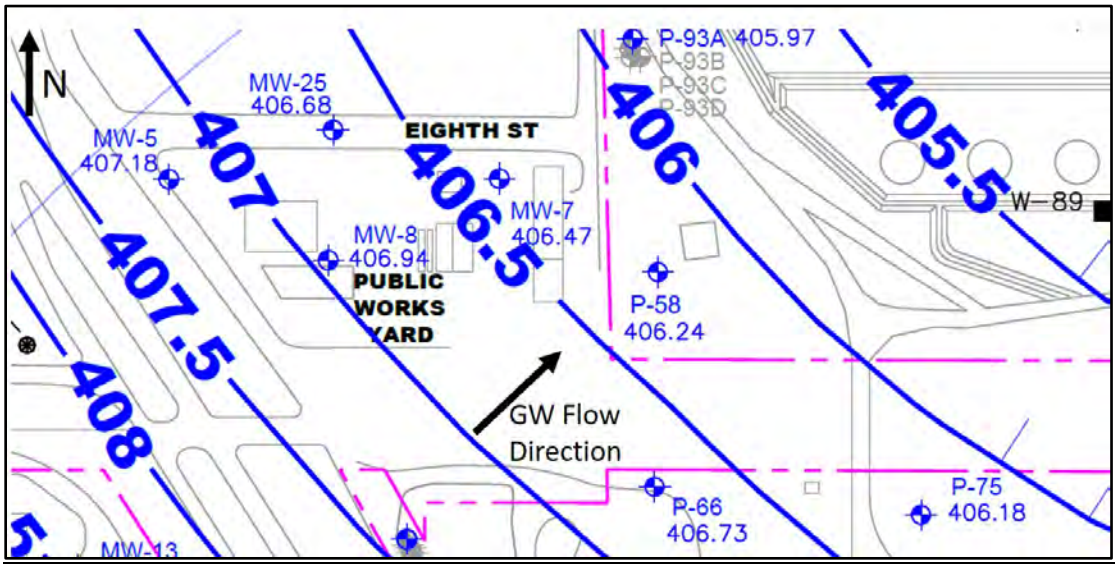
The results of the water quality testing are presented in **Table 5**. Water quality will be evaluated for the possibility of reinjection as part of SEE but will likely require pretreatment.

The SOPUS Westhollow laboratory performed additional analytical testing on groundwater samples suspected to contain NAPL; results were non-detect. SOPUS Westhollow groundwater analysis results can be found in **Appendix I.**

4.3 Assessment of Findings

Groundwater in the area is the primary source for large volume water production (e.g., industrial). Prior to development in the area, the natural movement of groundwater was toward the west (toward the Mississippi River). Since development in the area, groundwater pumping has altered the groundwater flow direction toward nearby industrial pumping wells. Regional pumping has decreased over the past several decades coupled with wetter than average rainfalls and elevated river stages have contributed to higher on-site groundwater levels than in the past.

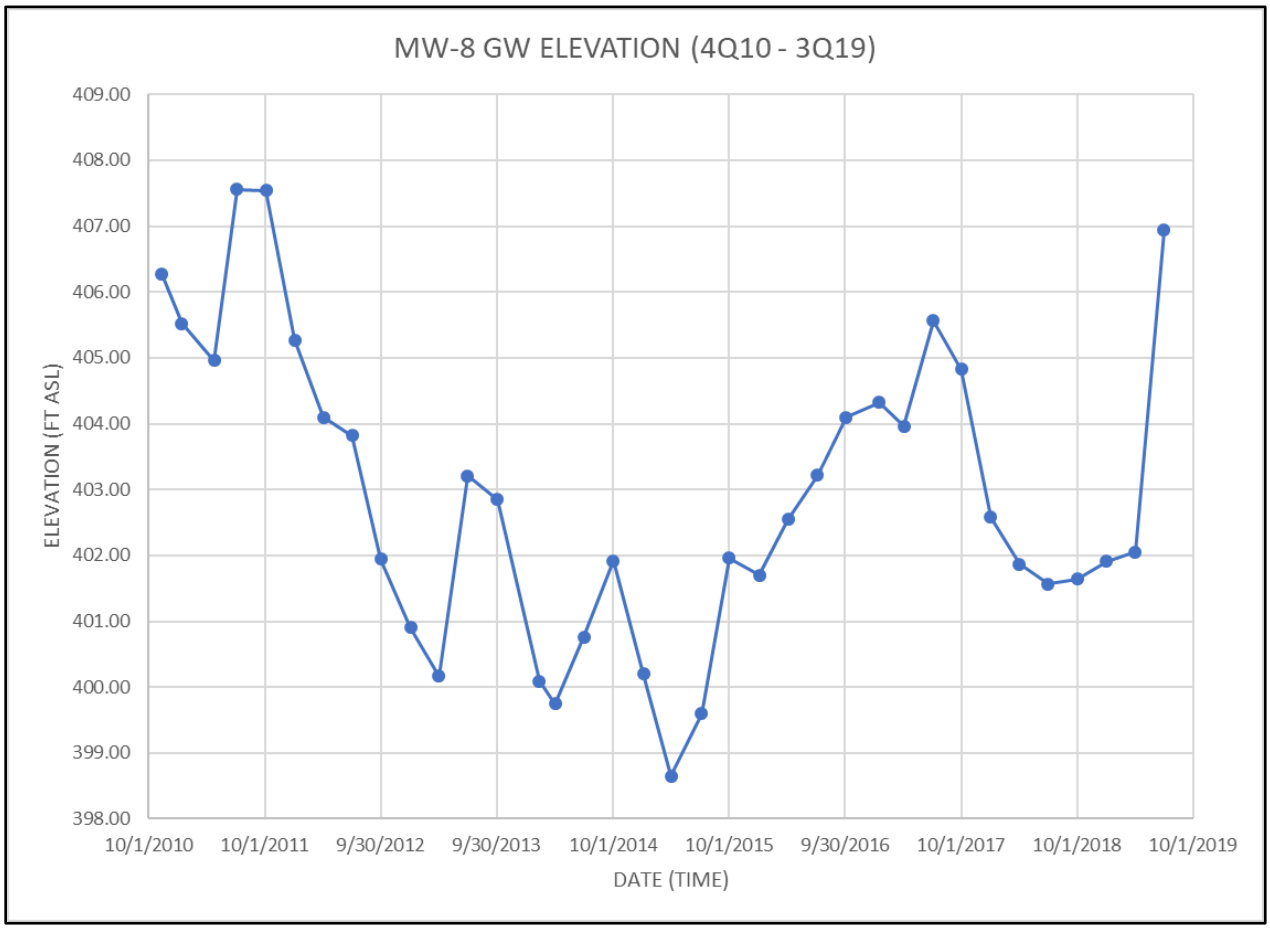
Groundwater occurs at a depth of approximately 28 feet bgs or elevation 407 North American Vertical Datum (NAVD 88), based on the 3rd quarter 2019 measurement in well MW-8 in the western portion of the PWY. Groundwater in this area is controlled by the high-volume pumping at the Wood River Refinery (WRR) which creates an aggregate cone of depression and resultant hydraulic gradients directed toward the pumping centers. The following figure, excerpted from Figure 3b in the 3rd quarter 2019 quarterly report (AECOM 2019), shows typical groundwater flow directions, with flow inward toward the refinery pumping wells (e.g., W-89).



Using the average horizontal hydraulic conductivity, hydraulic gradient of 0.00296 ft/ft (from 3Q19 data) and porosity[8] of 36% results in an estimated groundwater velocity of approximately 0.27 feet/day. In comparison, using the gradient from 1Q19 data (0.001 ft/ft) results in an estimated groundwater velocity of 0.09 ft/day.

The groundwater elevations observed in 3Q19 were unusually high, influenced in part by above-average precipitation in the first half of 2019 (year to date: 45 inches, historical average: 30 inches) and flood conditions in the Mississippi River. Between 2010 and present the groundwater elevation has ranged from approximately 399 to 407 feet NAVD 88. The chart below shows the elevation for well MW-8 for the past 10 years. The average elevation over this period is 403 feet.

[8] Porosity value represents an average of the literature-based values for fine to coarse sand.



Figures 10 and 11 are EVS images for soil and groundwater, respectively, each showing the approximate footprint (plan view) of benzene concentrations greater than 100 mg/kg or mg/L. The figures also show a 1,000 mg/kg or mg/L contour; this represents the greatest impact (benzene concentrations in the hundreds to thousands of mg/kg or mg/L). The images below the plan view map show oblique "3-D like" perspectives from the southwest part of the PWY, looking northeast. This 3-dimensional footprint of benzene in soil and groundwater, occupies an area in the PWY of approximately 1.9 acres, generally between 37 and 54 feet bgs[9] (388-398 feet). This suggests the greatest impact is submerged beneath current and longer-term average groundwater conditions.

Multiple lines of evidence, including dyeLIF response, visual identification of sheen, Sudan test results, PID readings, and analytical results were used to identify the zone of greatest impact. This information is included in **Table 6**. When grouping these multiple lines of evidence, it appears that the greatest impact occurs between approximately 37 and 54[9] feet bgs but is inconclusive for LNAPL.

A majority of the PWY facility has been vertically delineated for groundwater. The highest benzene concentrations occur from the groundwater surface to a depth of approximately 54 feet; concentrations averaged 672 mg/L within this interval. Below the 54-foot depth, concentrations were predominantly below 1 mg/L. There are exceptions to this in the northeastern part of the PWY (e.g., PD-3, and -7) where, as a result of the WRR pumping, concentrations up to 1,200 mg/L were detected to the depth sampled (71 feet bgs). Based on soil and groundwater analytical data, in situ concentrations are lowest in the western portion of the site.

Additionally, in soil samples collected in the highest zone of impact (37 to 54 feet bgs) benzene concentrations averaged 1,526 mg/kg. Below this depth the highest detection was 38 mg/kg.

[9] Depth range listed accounts for the difference in ground-surface elevation across the PWY.

5. Conclusions

AECOM conducted this Predesign Investigation on behalf of SOPUS on the Village of Roxana's Public Works Yard. Site and subsurface conditions have been assessed at the PWY over the past approximately 13 years and the historical data combined with the predesign data result in the following conclusions:

- The PWY comprises approximately 2.4 acres; approximately 20% of this is covered with buildings or structures.
- The uppermost 10 to 15 feet beneath the PWY is comprised of combinations of fill, silty clay and sand. Soils beneath this are almost entirely sands to the depths explored. The sands are primarily fine to medium grain with silt/clay content averaging approximately 3% in the samples tested. No laterally extensive silt or clay zones were identified within the sands.
- The average groundwater depth over the past 10 years is approximately 35.5 feet bgs across the PWY. This depth corresponds to an elevation of approximately 403 feet NAVD 88. The groundwater elevation during the Predesign Investigation was approximately 407 feet NAVD 88.
- The dyeLIF, Sudan, and soil benzene concentrations ranging from 120 to 23,000 mg/kg and groundwater benzene concentrations ranging from 180 to 2,900 mg/L, depict the most significant impact (primarily benzene) is in a zone between elevations of approximately 388 and 398 feet (37 to 54 feet bgs)[9] and occupying a footprint of approximately 1.9 acres. The highest detections are at depths below the water table (current and recent past).
- The vertical extent of dissolved phase impact has been further characterized at the PWY. The highest concentrations occur from the groundwater surface to a depth of approximately 54 feet bgs, where benzene concentrations range from 290 mg/L to 1,400 mg/L; concentrations are generally less than 1 mg/L below this depth. There are exceptions to this in the northeastern part of the PWY where, as a result of the WRR pumping, concentrations up to 1,200 mg/L were detected to the depth sampled (71 feet bgs).
- The data collected and evaluated in the Predesign Investigation continue to support that SEE is an applicable technology.
  - SEE is effective for treating the site COPCs, primarily benzene, as its boiling point is below the boiling point of water that the steam will reach.
  - SEE is most effective at depths greater than approximately 11 feet and with hydraulic conductivity greater than 10^{-5} cm/sec. PWY site impacts are focused in the saturated zone from 37 to 54 feet in depth and hydraulic conductivities average approximately 10^{-2} cm/sec to 10^{-3} cm/sec.
  - No optimal anisotropy exists when considering SEE, however significant differences in conductivities with direction (secondary porosity, etc.) can be controlling. Based on the horizontal and vertical hydraulic conductivity at this site, anisotropy should not be a limiting factor.
  - SEE can be a preferred method of remediation at sites with relatively homogenous stratigraphy, and higher groundwater flow rates as long as the hydraulic gradient is not too large. As a result of the relatively homogenous sands at the site, the hydraulic conductivity is relatively high and the hydraulic gradient is relatively low, which results in flow rates within the effective range for SEE.
  - The SEE process can potentially utilize water reinjection but may require pretreatment.

6. Limitations

SOPUS shall have the right to make and retain copies of and use all Work Product provided. However, such use shall be limited to the particular Site and project for which the Work Product is provided. SOPUS and its agents may release the Work Product to third parties at its sole risk and discretion. This report is based on data, site conditions, and other information that is generally applicable as of the date of this report, and the conclusions and recommendations herein are therefore applicable only to that time frame and to the report in its entirety.

Data may have been provided to AECOM by SOPUS or a third party and used in preparing this report. AECOM has relied on this information as furnished, and is neither responsible for, nor has confirmed the accuracy of this information.

Notes:

Table does not include analytes that were non-detect in all samples.

Compound was not detected, tentatively identified compound (TIC) search was performed.

LABORATORY QUALIFIERS

J = The analyte was detected below the reporting limit. Result is estimated.

F1 = Indicates MS and/or MSD recovery is outside acceptance limit.

<#.## Indicates the analyte was not detected above the given reporting limit.

AECOM QUALIFIERS

J = The result is estimated.

UJ = Estimated non-detect.

U = Result is non-detect.

Notes:

Table does not include analytes that were non-detect in all samples.

Compound was not detected, tentatively identified compound (TIC) search was performed.

LABORATORY QUALIFIERS

B = Target analyte was identified in the method blank, indicating possible lab contamination.

J = The analyte was detected below the reporting limit. Result is estimated.

F1 = Indicates MS and/or MSD recovery is outside acceptance limit.

F2 = MS/MSD RPD exceeds control limits.

<#.## Indicates the analyte was not detected above the given reporting limit.

AECOM QUALIFIERS

J = The result is estimated.

UJ = Estimated non-detect.

U = Result is non-detect.

Notes:

Table does not include analytes that were non-detect in all samples.

Compound was not detected, tentatively identified compound (TIC) search was performed.

LABORATORY QUALIFIERS

J = The analyte was detected below the reporting limit. Result is estimated.

<#.## Indicates the analyte was not detected above the given reporting limit.

AECOM QUALIFIERS

J = The result is estimated.

UJ = Estimated non-detect.

U = Result is non-detect.

SUMMARY OF GROUNDWATER SVOC ANALYTICAL DETECTIONS

Notes:

Table does not include analytes that were non-detect in all samples.

Compound was not detected, tentatively identified compound (TIC) search was performed.

LABORATORY QUALIFIERS

B = Target analyte was identified in the method blank, indicating possible lab contamination.

J = The analyte was detected below the reporting limit. Result is estimated.

H = Analyzed or extracted out of holding time criteria.

AECOM QUALIFIERS

J = The result is estimated.

UJ = Estimated non-detect.

U = Result is non-detect.

LABORATORY QUALIFIERS

B = Target analyte was identified in the method blank, indicating possible lab contamination.

J = The analyte was detected below the reporting limit. Result is estimated.

HF = Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.

<#.## Indicates the analyte was not detected above the given reporting limit.

AECOM QUALIFIERS

J = The result is estimated.

UJ = Estimated non-detect.

U = Result is non-detect.

NOTES:

1. Table only includes locations where more that one investigation method was conducted.
2. Fluorescent NAPL from Dakota. Dakota viewed samples under a microscope; sample fluoresced in presence of dye
3. Westhollow NAPL Confirmation: Results from selected samples that were sent for analysis to Shell's Westhollow Laboratory.

- = Indicates NM
ND = Non-Detect
NA = Indicates Not Applicable since CPT/DyeLIF hit refusal before this depth
* = Indicates the minimum to maximum estimated K-value from the sample interval based on LIF logs

Indicates Zone of Neglible Impact.
Indicates Zone of Lesser Impact based on fewer lines of supporting data.
Indicates Zone of Highest Impact based on multiple lines of supporting data.

Figures

The following EVS Descriptions and Assumptions apply to **Figures 3A-C, 4A-C, 5A-C, 6A-C, 7A-C, 10, and 11**. C Tech Development Corporation's Earth Volumetric Studio, Version 19.2 (EVS 19.2) was used to model the estimated distribution of benzene in the groundwater and soil, as well as lithology derived from cone penetration testing (CPT) data.

EVS Descriptions and Assumptions:

3D Model Output – The data input for the model was not limited by depth and was modeled in three dimensions (3D) using a 3D interpolation process called kriging.

Duplicate Samples – In locations and depths where duplication samples were collected, the higher concentration was used.

Detection Limits – In cases where the lab reported a non-detect, half the value of the lab reporting limit was used in the model. This conservative method assumes that the sample is likely not free of benzene, but the quantity contained is lower than detectable at the analyzed dilution.

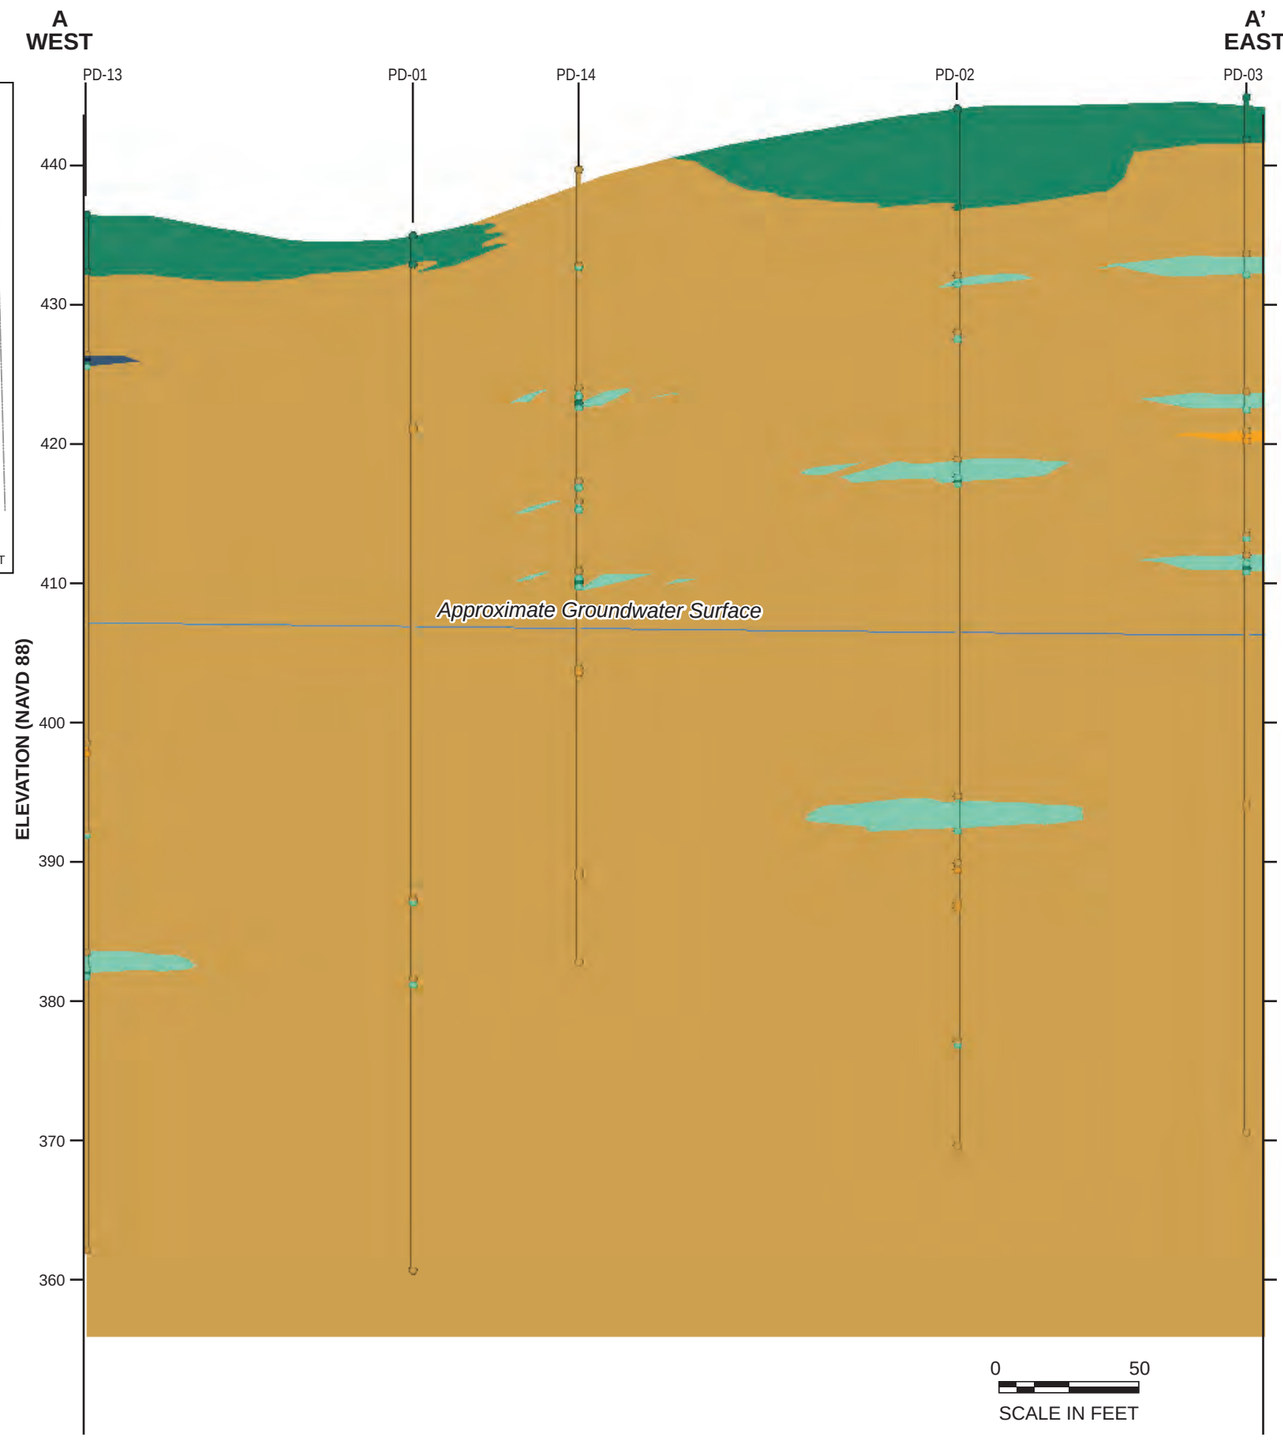
- Silty Sand and Sandy Silt
- Clay and Silty Clay
- Clay



NOTES

NAVD 88 North American Vertical Datum

1. Lithology was modeled using CTECH's Earth Volumetric Studio (EVS), version 2019.2.
2. Modeled lithology is based on CPT data collected at 18 locations on June 10 - June 20, 2019, except the upper 10 feet, which was based on hand auger logs.
3. Locations within 15 feet were projected onto the cross section line.
4. The approximate groundwater surface was modeled using gauging data from the 3Q19 Roxana Interim Groundwater Monitoring Program.

NOTES

NAVD 88	North American Vertical Datum
mg/kg	milligrams per kilogram
PID	photoionization detector
>	greater than
ppm	parts per million

1. Lithology and concentrations of benzene in soil were modeled using CTECH's Earth Volumetric Studio (EVS), version 2019.2;
2. Contour lines are in orders of magnitude, starting at 100 mg/kg.
3. Modeled lithology is based on CPT data collected at 18 locations on June 10 - June 20, 2019, except the upper 10 feet, which was based on hand auger logs.
4. Benzene in soil was modeled using EVS' Krig Statistics method. The dataset includes historical and predesign concentrations of benzene in soil at the site (larger dots represent analytical results).
5. PID data are represented by small, unlabeled dots.
6. Locations within 15 feet were projected onto the cross section line.
7. The approximate groundwater surface was modeled using gauging data from the 3Q19 Roxana Interim Groundwater Monitoring Program.

NOTES

NAVD 88 — North American Vertical Datum
mg/L — milligrams per liter

1. Lithology and concentrations of benzene in groundwater were modeled using CTECH's Earth Volumetric Studio (EVS), version 2019.2;
2. Contour lines are in orders of magnitude, starting at 100 mg/L.
3. Modeled lithology was based on CPT data collected at 18 locations on June 10 - June 20, 2019, except the upper 10 feet, which was based on hand auger logs.
4. Benzene in groundwater was modeled using EVS' Krig Statistics method. The dataset includes predesign concentrations of benzene in groundwater at the site, as well as concentrations from the 3Q19 Roxana Interim Groundwater Monitoring Program.
5. Locations within 15 feet were projected onto the cross section line.
6. The approximate groundwater surface was modeled using gauging data from the 3Q19 Roxana Interim Groundwater Monitoring Program.

NOTES

NAVD 88 North American Vertical Datum
mg/kg milligrams per kilogram

1. Benzene in soil was modeled using the Krig Statistic's method in CTECH's Earth Volumetric Studio (EVS), version 2019.2. The dataset includes historical and predesign concentrations of benzene in soil at the site (larger dots represent analytical results). Historical data are not shown on this figure. The benzene plume is shown at 100 mg/kg. A 1,000 mg/kg contour line is shown on the plan view image.

2. For the purposes of this figure, the ground surface is modeled as a plane at elevation 450 NAVD 88.

3. The oblique image is at azimuth 202 and 20 degree inclination.

NOTES

NAVD 88 North American Vertical Datum
mg/L milligrams per liter

1. Benzene in groundwater was modeled using the Krig Statistic's method in CTECH's Earth Volumetric Studio (EVS), version 2019.2. The dataset includes predesign concentrations of benzene in groundwater at the site, as well as concentrations from the 3Q19 Roxana Interim Groundwater Monitoring Program. The benzene plume is shown at 100 mg/L. A 1,000 mg/L contour line is shown in the plan view image.

2. For the purposes of this figure, the ground surface is modeled as a plane at elevation 450 NAVD 88.

3. The oblique image is at azimuth 202 and 20 degree inclination.

Appendix D – Low-flow Groundwater Sampling Datasheets

LOW FLOW GROUNDWATER SAMPLING DATA SHEET

PROJECT NAME: Public Works | PROJECT NUMBER: 60592794.1.24.060 | FIELD PERSONNEL: James Rougeate
DATE: 6/25/19 | EVENT: Pre Design Invest | WEATHER: Clear - 80s
MONITORING WELL ID: PD-01-GW1 | SAMPLE ID: PD-01-GWP-34-062519

INITIAL DATA

Well Diameter (in): 4/16"
Total Well Depth (ft btoc): ~35.00' BGS
Depth to Water (ft btoc): 37.58' BTOPR
Depth to LNAPL (ft btoc): 41.72' BTOPR
Depth to Top of Screen (ft btoc): ~33.00' BGS
Screen Length: 2.00'

Water Column Height (do not include LNAPL, ft): N/A
If Depth to Top of Screen is > Depth to Water, Place Pump at
Depth to Top of Screen + 5 feet = N/A
If Depth to Top of Screen is < Depth to Water, Place Pump at
Depth to Water + 5 feet = N/A
If Water Column Height is < 10 feet, Place Pump at
Depth to Water + (0.5 * Water Column Height) = N/A

Volume of Flow Through Cell (mL): ~320
Minimum Purge Volume (mL) =
(3 x Flow Through Cell Volume): ~960

Wellbore PID/FID Reading (ppm): N/A
Ambient PID/FID Reading (ppm): N/A

PURGE DATA

LOW FLOW GROUNDWATER SAMPLING DATA SHEET

PROJECT NAME: Public Works
DATE: 7-15-19
MONITORING WELL ID: PD-12
PROJECT NUMBER: 60592794.1.24.060
EVENT: ROX PW Investigation
SAMPLE ID: PD-12-GWP-73-071519
FIELD PERSONNEL: P. Lafleur, J Carrino
WEATHER: cloudy, mild

INITIAL DATA

Well Diameter (in): 3/16"
Total Well Depth (ft btoc): 75
Depth to Water (ft btoc): 43.6 rising BTOPR
Depth to LNAPL (ft btoc): –
Depth to Top of Screen (ft btoc): 73'
Screen Length: 2"

Water Column Height (do not include LNAPL, ft): –
If Depth to Top of Screen is > Depth to Water, Place Pump at Depth to Top of Screen + 5 feet = –
If Depth to Top of Screen is < Depth to Water, Place Pump at Depth to Water + 5 feet = –
If Water Column Height is < 10 feet, Place Pump at Depth to Water + (0.5 * Water Column Height) = –

Volume of Flow Through Cell (mL): 320 ml
Minimum Purge Volume (mL) = (3 x Flow Through Cell Volume): 960 ml
Wellbore PID/FID Reading (ppm): 5.2
Ambient PID/FID Reading (ppm): 0.0

Start Time: 0920
Stop Time: 0924
Elapsed Time (min): BH ~~0930~~ 4
Average Purge Rate (mL/min): 300
Water Quality Meter ID & SN: YSI - 18L101937
Date Calibrated: 7/18/19

SAMPLING DATA

Sample Date: 7/18/19
Sample Method: Low Flow
VOA Vials, No Headspace (Initials): BH
Sample Time: 0930
Sample Flow Rate (mL/min): 300
Total Purge Volume (mL): 1200
Lab Analysis: BTEX, PAH, SVOCs
QA/QC Samples: EB upon completion of hole @ 0950

COMMENTS:

* Flow through cell volume calculated as: Volume = cup (725 mL) - pH_ORP (16 mL) - RDO (56 mL) - Cond (13 mL) - Turb (40 mL)

BTOPR: Below TOP of Probe Rod

LOW FLOW GROUNDWATER SAMPLING DATA SHEET

PROJECT NAME: Public Works
PROJECT NUMBER: 60592794 - 1.24.060
FIELD PERSONNEL: P. Lafleur
DATE: 7-19-19
EVENT: Roxana Public Works Investigation
WEATHER: Hot, sunny, 95°F
MONITORING WELL ID: PD-17-GWP
SAMPLE ID: PD-17-GWP-45-071919

INITIAL DATA

Well Diameter (in): 9/16"
Total Well Depth (ft btoc): 46
Depth to Water (ft btoc): 35.81 BTOPR
Depth to LNAPL (ft btoc): -
Depth to Top of Screen (ft btoc): 44
Screen Length: 2 ft

Water Column Height (do not include LNAPL, ft): NA
If Depth to Top of Screen is > Depth to Water, Place Pump at
Depth to Top of Screen + 5 feet = NA
If Depth to Top of Screen is < Depth to Water, Place Pump at
Depth to Water + 5 feet = NA
If Water Column Height is < 10 feet, Place Pump at
Depth to Water + (0.5 * Water Column Height) = NA

Volume of Flow Through Cell (mL): 320
Minimum Purge Volume (mL) =
(3 x Flow Through Cell Volume): 960

Wellbore PID/FID Reading (ppm): 2.3
Ambient PID/FID Reading (ppm): 0.1

Roxana Predesign Soil Data Review

Laboratory SDG: 19060677

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 6/13/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification
PD-10-SB-19-061119

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

No problems were indicated in the laboratory case narrative or cooler receipt form.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

No

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

Yes

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

No

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

No

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Sample PD-10-SB-19-061119 method 8270C SVOCs were analyzed at a 100X dilution due to matrix interference; SVOC results were reported as non-detect at elevated reporting limits.

12.0 Additional Qualifications

Were additional qualifications applied?

No

NELAP ACCREDITED TNI LABORATORY

RE: PreDesign Invest. PW

WorkOrder: 19060677

Dear Elizabeth Kunkel:

TEKLAB, INC received 1 sample on 6/11/2019 4:52:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
C - RL shown is a Client Requested Quantitation Limit	E - Value above quantitation range
H - Holding times exceeded	I - Associated internal standard was outside method criteria
J - Analyte detected below quantitation limits	M - Manual Integration used to determine area response
ND - Not Detected at the Reporting Limit	R - RPD outside accepted recovery limits
S - Spike Recovery outside recovery limits	T - TIC(Tentatively identified compound)
X - Value exceeds Maximum Contaminant Level

Chain of custody agrees with sample labels?	Yes ☑	No ☐		
Samples in proper container/bottle?	Yes ☑	No ☐		
Sample containers intact?	Yes ☑	No ☐		
Sufficient sample volume for indicated test?	Yes ☑	No ☐		
All samples received within holding time?	Yes ☑	No ☐		
Reported field parameters measured:	Field ☐	Lab ☐	NA ☑	
Container/Temp Blank temperature in compliance?	Yes ☑	No ☐		
When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.				
Water – at least one vial per sample has zero headspace?	Yes ☐	No ☐	No VOA vials ☑	
Water - TOX containers have zero headspace?	Yes ☐	No ☐	No TOX containers ☑	
Water - pH acceptable upon receipt?	Yes ☐	No ☐	NA ☑	
NPDES/CWA TCN interferences checked/treated in the field?	Yes ☐	No ☐	NA ☑	

Any No responses must be detailed below or on the COC.

Roxana Predesign Soil Data Review

Laboratory SDG: 19060781

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 6/17/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification	Sample Identification
PD-5-CPT-061219-EB	TB-PW-061219
PD-10-SB-46-061219	

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, although not indicated in the laboratory case narrative, the compound naphthalene was detected in the method blank. Analytes were detected in equipment blank, PD-5-CPT-061219-EB. This issue is addressed further in section 4.0 of this data review. Additionally. the sample ID for PD-10-SB-46-061219 was recorded on the COC with a depth of 45 feet; sample results are reported correctly; no qualification of data was required.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount
PD-5-CPT-061219-EB	VOCs	Acetone	12.2 μg/L
PD-5-CPT-061219-EB	VOCs	Benzene	1.2 μg/L
MBLK-T190613A-1	VOCs	Naphthalene	0.4 μg/L

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration, (10X) for common laboratory contaminants, did not require qualification. No qualification of data was required.

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

Yes

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

No

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; analytes were detected in samples that were diluted.

12.0 Additional Qualifications

Were additional qualifications applied?

No

NELAP ACCREDITED TNI LABORATORY

RE: PreDesign Invest. PW

WorkOrder: 19060781

Dear Elizabeth Kunkel:

TEKLAB, INC received 3 samples on 6/12/2019 4:40:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
C - RL shown is a Client Requested Quantitation Limit	E - Value above quantitation range
H - Holding times exceeded	I - Associated internal standard was outside method criteria
J - Analyte detected below quantitation limits	M - Manual Integration used to determine area response
ND - Not Detected at the Reporting Limit	R - RPD outside accepted recovery limits
S - Spike Recovery outside recovery limits	T - TIC(Tentatively identified compound)
X - Value exceeds Maximum Contaminant Level

Roxana Predesign Soil Data Review

Laboratory SDG: 19060884

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 6/17/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification	Sample Identification
PD-5-SB-17-061319	TB-PW-061319

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, although not indicated in the laboratory case narrative, the compound acetone was detected in the trip blank. MS/MSD recoveries for fluorene and 2-chlorophenol were outside evaluation criteria in sample PD-5-SB-17-061319. These issues are addressed further in the appropriate sections of this data review.

The cooler receipt form indicated that the trip blank was received with headspace; sample analysis was performed. No qualification of data was required; investigative sample was a soil sample.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount
TB-PW-061319	VOCs	Acetone	4.6 μg/L

Analytical data that were reported non-detect or at concentrations greater than ten times (10X) for common laboratory contaminants in the associated blank concentration did not require qualification. No qualification of data was required.

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

Yes

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

Yes, although not requested sample PD-5-SB-17-061319 was spiked and analyzed for VOCs, SVOCs and PAHs.

Were MS/MSD recoveries within evaluation criteria?

No

MS/MSD ID	Parameter	Analyte	MS/MSD Recovery (%)	RPD	MS/MSD/ RPD Criteria
PD-5-SB-17-061319	PAHs	Fluorene	**43.3**/45.3	4.57	44.3-96.6/40
PD-5-SB-17-061319	SVOCs	2-Chlorophenol	89.3/**100.8**	3.12	51.2-98.2/40

Analytical data that required qualification based on MS/MSD data are included in the table below. Analytical data associated with RPD alone outside evaluation criteria did not require qualification. Analytical data reported as non-detect and associated with MSMSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Sample ID	Parameter	Analyte	Qualification
PD-5-SB-17-061319	PAHs	Fluorene	**UJ**

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

No

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; analytes were detected in samples that were diluted.

12.0 Additional Qualifications

Were additional qualifications applied?

No

NELAP ACCREDITED TNI LABORATORY

RE: PreDesign Invest. PW

WorkOrder: 19060884

Dear Elizabeth Kunkel:

TEKLAB, INC received 2 samples on 6/13/2019 4:31:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
C - RL shown is a Client Requested Quantitation Limit	E - Value above quantitation range
H - Holding times exceeded	I - Associated internal standard was outside method criteria
J - Analyte detected below quantitation limits	M - Manual Integration used to determine area response
ND - Not Detected at the Reporting Limit	R - RPD outside accepted recovery limits
S - Spike Recovery outside recovery limits	T - TIC(Tentatively identified compound)
X - Value exceeds Maximum Contaminant Level

Receiving Check List

http://www.teklabinc.com/

Client: AECOM
Work Order: 19060884
Client Project: PreDesign Invest. PW
Report Date: 17-Jun-2019

Carrier: Robert Fleming
Received By: EEP

Completed by: Emily Pohlman
On: 13-Jun-2019

Reviewed by: Elizabeth A. Hurley
On: 13-Jun-2019

Pages to follow: Chain of custody [1] Extra pages included [10]

Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐	Temp °C 8.0
Type of thermal preservation?	None ☐	Ice ☑	Blue Ice ☐	Dry Ice ☐
Chain of custody present?	Yes ☑	No ☐		
Chain of custody signed when relinquished and received?	Yes ☑	No ☐		
Chain of custody agrees with sample labels?	Yes ☑	No ☐		
Samples in proper container/bottle?	Yes ☑	No ☐		
Sample containers intact?	Yes ☑	No ☐		
Sufficient sample volume for indicated test?	Yes ☑	No ☐		
All samples received within holding time?	Yes ☑	No ☐		
Reported field parameters measured:	Field ☐	Lab ☐	NA ☑	
Container/Temp Blank temperature in compliance?	Yes ☑	No ☐		
When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.				
Water – at least one vial per sample has zero headspace?	Yes ☐	No ☑	No VOA vials ☐	
Water - TOX containers have zero headspace?	Yes ☐	No ☐	No TOX containers ☑	
Water - pH acceptable upon receipt?	Yes ☑	No ☐	NA ☐	
NPDES/CWA TCN interferences checked/treated in the field?	Yes ☐	No ☐	NA ☑	

Any No responses must be detailed below or on the COC.

Headspace was present in the volatile vials. Elizabeth Kunkel was notified of this error via workorder summary. - epohlman - 6/13/2019 4:47:23 PM

Trip Blank collection date and time will be reported as the received date and time (end of trip). - ehurley - 6/13/2019 5:30:18 PM

Roxana Predesign Soil Data Review

Laboratory SDG: 19060980

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 6/19/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification	Sample Identification
PD-5-SB-62-061419	TB-PW-061419
PD-5-SB-061419-EB	PD-5-SB-43-061419
PD-5-SB-53-061419	

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, although not indicated in the laboratory case narrative analytes were detected in the blanks. SVOC LCS recovery for quinoline was outside evaluation criteria. VOC LCS/LCSD recoveries for acetone were outside evaluation criteria. SVOC MS/MSD recoveries were outside evaluation criteria in sample PD-5-SB-53-061419. These issues are addressed further in the appropriate sections of this data review.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount
Trip Blank	VOCs	Acetone	3.5 µg/L
PD-5-SB-061419-EB	VOCs	Benzene	3.2 µg/L
PD-5-SB-061419-EB	VOCs	Chloromethane	0.4 µg/L
PD-5-SB-061419-EB	VOCs	Ethylbenzene	0.2 µg/L
PD-5-SB-061419-EB	VOCs	m,p-Xylenes	0.5 µg/L
PD-5-SB-061419-EB	VOCs	o-Xylene	0.1 µg/L
PD-5-SB-061419-EB	VOCs	Xylenes, Total	0.6 µg/L
MBLK-T190617A-1	VOCs	Naphthalene	0.4 µg/L
PD-5-SB-061419-EB	PAHs	1-Methylnaphthalene	0.00005 mg/L

Blank ID	Parameter	Analyte	Concentration/ Amount
PD-5-SB-061419-EB	PAHs	2-Methylnaphthalene	0.00009 mg/L

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

No

LCS/LCSD ID	Parameter	Analyte	LCS/ LCSD Recovery	RPD	LCS/LCSD /RPD Criteria
LCS-54319	SVOCs	Quinoline	**98.4**	NA	48.5-97.3
LCS-AF190617A-1	VOCs	Acetone	**179.1**/**173.4**	223.9	52.2-164/40

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

Yes, although not requested sample PD-5-SB-53-061419 was spiked and duplicated for SVOCs. Sample PD-5-SB-43-061419 was spiked and duplicated for PAHs.

Were MS/MSD recoveries within evaluation criteria?

No

MS/MSD ID	Parameter	Analyte	MS/MSD Recovery (%)	RPD	MS/MSD/ RPD Criteria
PD-5-SB-53-061419	SVOCs	Hexachloroethane	**152.1**/**136.5**	9.02	26.2-115/40
PD-5-SB-53-061419	SVOCs	Pyridine	71.3/**0**	4.23	13.6-91.5/40
PD-5-SB-53-061419	SVOCs	Quinoline	97.9/**39.8**	5.81	48-105/40

Analytical data that required qualification based on MS/MSD data are included in the following table. Analytical data associated with RPD alone outside evaluation criteria did not require qualification. Analytical data reported as non-detect and associated with MSMSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Sample ID	Parameter	Analyte	Qualification
PD-5-SB-53-061419	SVOCs	Pyridine	**UJ**
PD-5-SB-53-061419	SVOCs	Quinoline	**UJ**

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

No

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; samples analyzed did not require dilution.

12.0 Additional Qualifications

Were additional qualifications applied?

No

NELAP ACCREDITED TNI LABORATORY

RE: PreDesign Invest. PW

WorkOrder: 19060980

Dear Elizabeth Kunkel:

TEKLAB, INC received 5 samples on 6/14/2019 4:51:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
C - RL shown is a Client Requested Quantitation Limit	E - Value above quantitation range
H - Holding times exceeded	I - Associated internal standard was outside method criteria
J - Analyte detected below quantitation limits	M - Manual Integration used to determine area response
ND - Not Detected at the Reporting Limit	R - RPD outside accepted recovery limits
S - Spike Recovery outside recovery limits	T - TIC(Tentatively identified compound)
X - Value exceeds Maximum Contaminant Level

LCS recovered outside upper control limits for Quinoline. Sample results are below the reporting limit. Data is reportable per the TNI Standard. Elevated reporting limit due to sample composition.

Client: AECOM
Work Order: 19060980
Client Project: PreDesign Invest. PW
Report Date: 18-Jun-2019

Carrier: Robert Fleming
Received By: AMD

Completed by: Amber M. Dilallo
On: 14-Jun-2019

Reviewed by: Elizabeth A. Hurley
On: 14-Jun-2019

Pages to follow: Chain of custody [1] Extra pages included [78]

Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐	Temp °C 18.8
Type of thermal preservation?	None ☐	Ice ☑	Blue Ice ☐	Dry Ice ☐
Chain of custody present?	Yes ☑	No ☐		
Chain of custody signed when relinquished and received?	Yes ☑	No ☐		
Chain of custody agrees with sample labels?	Yes ☑	No ☐		
Samples in proper container/bottle?	Yes ☑	No ☐		
Sample containers intact?	Yes ☑	No ☐		
Sufficient sample volume for indicated test?	Yes ☑	No ☐		
All samples received within holding time?	Yes ☑	No ☐		
Reported field parameters measured:	Field ☐	Lab ☐	NA ☑	
Container/Temp Blank temperature in compliance?	Yes ☑	No ☐		
When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.				
Water – at least one vial per sample has zero headspace?	Yes ☐	No ☑	No VOA vials ☐	
Water - TOX containers have zero headspace?	Yes ☐	No ☐	No TOX containers ☑	
Water - pH acceptable upon receipt?	Yes ☑	No ☐	NA ☐	
NPDES/CWA TCN interferences checked/treated in the field?	Yes ☐	No ☐	NA ☑	

Any No responses must be detailed below or on the COC.

Headspace was present in the TB-PW-061419 volatile. Elizabeth Kunkel, was notified of this error via work order summary. - adilallo - 6/14/2019 5:02:16 PM

Trip Blank collection date and time will be reported as the received date and time (end of trip). - ehurley - 6/14/2019 5:29:20 PM

Roxana Predesign Soil Data Review

Laboratory SDG: 19061180R1

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 6/19/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification	Sample Identification
PD-1-SB-53-061819	TB-PW-061819
PD-1-SB-55-061819	

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

The laboratory case narrative indicated the report was revised on 6/20/2019 to include tentatively identified compounds (TICs) for the Methods 8260 and 8270 analyses.

The cooler receipt form indicated headspace was present in one of the two trip blank vials; no qualification of data was required.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

No

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

Yes

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

Yes, although not requested sample PD-1-SB-55-061819 was spiked and duplicated for PAHs. Sample PD-1-SB-53-061819 was spiked and duplicated for SVOCs

Were MS/MSD recoveries within evaluation criteria?

Yes

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

No

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; analytes were detected in samples diluted.

12.0 Additional Qualifications

Were additional qualifications applied?

No

NELAP ACCREDITED TNI LABORATORY

RE: PreDesign Invest. PW

WorkOrder: 19061180

Dear Elizabeth Kunkel:

TEKLAB, INC received 3 samples on 6/18/2019 5:00:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
C - RL shown is a Client Requested Quantitation Limit	E - Value above quantitation range
H - Holding times exceeded	I - Associated internal standard was outside method criteria
J - Analyte detected below quantitation limits	M - Manual Integration used to determine area response
ND - Not Detected at the Reporting Limit	R - RPD outside accepted recovery limits
S - Spike Recovery outside recovery limits	T - TIC(Tentatively identified compound)
X - Value exceeds Maximum Contaminant Level

Pages to follow: Chain of custody [1] Extra pages included [36]

Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐	Temp °C 5.8
Type of thermal preservation?	None ☐	Ice ☑	Blue Ice ☐	Dry Ice ☐
Chain of custody present?	Yes ☑	No ☐		
Chain of custody signed when relinquished and received?	Yes ☑	No ☐		
Chain of custody agrees with sample labels?	Yes ☑	No ☐		
Samples in proper container/bottle?	Yes ☑	No ☐		
Sample containers intact?	Yes ☑	No ☐		
Sufficient sample volume for indicated test?	Yes ☑	No ☐		
All samples received within holding time?	Yes ☑	No ☐		
Reported field parameters measured:	Field ☐	Lab ☐	NA ☑	
Container/Temp Blank temperature in compliance?	Yes ☑	No ☐		
When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.				
Water – at least one vial per sample has zero headspace?	Yes ☑	No ☐	No VOA vials ☐	
Water - TOX containers have zero headspace?	Yes ☐	No ☐	No TOX containers ☑	
Water - pH acceptable upon receipt?	Yes ☑	No ☐	NA ☐	
NPDES/CWA TCN interferences checked/treated in the field?	Yes ☐	No ☐	NA ☑	

Any No responses must be detailed below or on the COC.

Trip Blank collection date and time will be reported as the received date and time (end of trip). - MDarling - 6/18/2019 5:50:22 PM

Headspace was present in one of the TB-PW-061819 volatile vials. - MLDII/ehurley - 6/18/2019 6:59:18 PM

Roxana Predesign Soil Data Review

Laboratory SDG: 19061444

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 6/25/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification	Sample Identification
PD-4-SB-35-062119	TB-PW-062119

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated SVOC LCS recoveries were outside evaluation criteria. MSD recovery for quinoline was outside evaluation criteria in sample PD-4-SB-35-062119. These issues are addressed further in the appropriate sections of this data review.

The cooler receipt form indicated headspace was present in one of the two trip blank vials; no qualification of data was required.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

No

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

No

LCS/LCSD ID	Parameter	Analyte	LCS/ LCSD Recovery	RPD	LCS/LCSD /RPD Criteria
LCS-154595	SVOCs	4-Chloro-3-methylphenol	**107.7**	NA	50-103
LCS-154595	SVOCs	4-Nitrophenol	**113.8**	NA	46.3-111
LCS-154595	SVOCs	Quinoline	**110.1**	NA	48.5-97.3

LCS/LCSD ID	Parameter	Analyte	LCS/ LCSD Recovery	RPD	LCS/LCSD /RPD Criteria
LCS-AE 190621A-1	VOCs	2-Chloroethyl vinyl ether	**230.7/238.4**	3.27	31.5-159/40

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

Yes, although not requested sample PD-4-SB-35-062119 was spiked and duplicated for PAHs and SVOCs.

Were MS/MSD recoveries within evaluation criteria?

No

MS/MSD ID	Parameter	Analyte	MS/MSD Recovery (%)	RPD	MS/MSD/ RPD Criteria
PD-4-SB-35-062119	SVOCs	Quinoline	101.9/105.1	6.07	48-105/40

Analytical data that required qualification based on MS/MSD data are included in the table below. Analytical data reported as non-detect and associated with MS/MSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

No

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; analytes were detected in samples that were diluted.

12.0 Additional Qualifications

Were additional qualifications applied?

No

NELAP ACCREDITED TNI LABORATORY

RE: PreDesign Invest. PW

WorkOrder: 19061444

Dear Elizabeth Kunkel:

TEKLAB, INC received 2 samples on 6/21/2019 1:30:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

- # - Unknown hydrocarbon
- B - Analyte detected in associated Method Blank
- C - RL shown is a Client Requested Quantitation Limit
- E - Value above quantitation range
- H - Holding times exceeded
- I - Associated internal standard was outside method criteria
- J - Analyte detected below quantitation limits
- M - Manual Integration used to determine area response
- ND - Not Detected at the Reporting Limit
- R - RPD outside accepted recovery limits
- S - Spike Recovery outside recovery limits
- T - TIC(Tentatively identified compound)
- X - Value exceeds Maximum Contaminant Level

Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐	Temp °C 8.2
Type of thermal preservation?	None ☐	Ice ☑	Blue Ice ☐	Dry Ice ☐
Chain of custody present?	Yes ☑	No ☐		
Chain of custody signed when relinquished and received?	Yes ☑	No ☐		
Chain of custody agrees with sample labels?	Yes ☑	No ☐		
Samples in proper container/bottle?	Yes ☑	No ☐		
Sample containers intact?	Yes ☑	No ☐		
Sufficient sample volume for indicated test?	Yes ☑	No ☐		
All samples received within holding time?	Yes ☑	No ☐		
Reported field parameters measured:	Field ☐	Lab ☐	NA ☑	
Container/Temp Blank temperature in compliance?	Yes ☑	No ☐		
When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.				
Water – at least one vial per sample has zero headspace?	Yes ☑	No ☐	No VOA vials ☐	
Water - TOX containers have zero headspace?	Yes ☐	No ☐	No TOX containers ☑	
Water - pH acceptable upon receipt?	Yes ☑	No ☐	NA ☐	
NPDES/CWA TCN interferences checked/treated in the field?	Yes ☐	No ☐	NA ☑	

Any No responses must be detailed below or on the COC.

Trip Blank collection date and time will be reported as the received date and time (end of trip). - ehurley - 6/21/2019 2:03:23 PM

Headspace was present in one of the Trip Blank volatile vials. - ehurley - 6/21/2019 2:03:25 PM

Roxana Predesign Soil Data Review

Laboratory SDG: 400-172155

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 7/25/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification	Sample Identification
TB-PW-062419	PD-4-SB-41-062419
PD-4-SB-53-062419	

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated SVOC and PAH analytes were detected in the method blanks. VOC and SVOC LCS/LCSD recoveries were outside evaluation criteria. PAH surrogate recoveries were outside evaluation criteria in the method blank. These issues are addressed further in the appropriate sections of this data review.

Additionally, the laboratory case narrative indicated three of the 8260 VOCs (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount
MB 400-446440/1-A	SVOCs	bis(2-ethylhexyl) phthalate	53.8 μg/Kg
MB 400-446440/1-A	PAHs	Fluoranthene	2.71 μg/Kg
MB 400-446440/1-A	PAHs	2-Methylnaphthalene	1.73 μg/Kg
MB 400-446440/1-A	PAHs	Pyrene	2.22 μg/Kg

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

Sample ID	Parameter	Analyte	New Reporting Limit (RL)	Qualification
PD-4-SB-41-062419	PAHs	2-Methylnaphthalene	-	**U**
PD-4-SB-41-062419	PAHs	Pyrene	-	**U**

400-447082/1-A	VOCs	4-Methyl-2-pentanone (MIBK)	**131**	58-130
400-447082/1-A	VOCs	1,1,1,2-Tetrachloroethane	**140**	65-130
400-447082/1-A	VOCs	trans-1,3-Dichloropropene	**134**	60-130
400-446440/4-A/5-A	SVOCs	Benzenethiol	**1/2**	10-120

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Sample ID	Parameter	Analyte	Qualification
PD-4-SB-41-062419	SVOCs	Benzenethiol	**UJ**
PD-4-SB-53-062419	SVOCs	Benzenethiol	**UJ**

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

No

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
MB 400-446440/1-A	PAHs	2-Fluorobiphenyl	**128**	27-127
MB 400-446440/1-A	PAHs	Terphenyl-d14	**161**	24-146

Method blank, MB 400-446440/1-A is a quality control sample and does not require qualification. No qualification of data was required.

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

No

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

No

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; analytes were detected in samples that were diluted.

12.0 Additional Qualifications

Were additional qualifications applied?

No

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 6/25/2019 8:37 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.0° C.

Receipt Exceptions

Collection times were not listed on the COC. Container labels were referenced.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-446984 recovered above the upper control limit for 2-Hexanone and Acetone. The sample associated with this CCV was non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 400-446984 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane, 2-Hexanone, Acetone, 4-Methyl-2-pentanone (MIBK) and Ethyl methacrylate. These analytes were biased high in the LCS and were not detected in the associated sample; therefore, the data have been reported.

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-4-SB-53-062419 (400-172155-3). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The laboratory control sample (LCS) for preparation batch 400-447082 and analytical batch 400-447049 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane, 2-Hexanone, 4-Methyl-2-pentanone (MIBK), Ethyl methacrylate and trans-1,3-Dichloropropene. These analytes were biased high in the LCS and were not detected in the associated sample; therefore, the data have been reported.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-062419 (400-172155-1). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine. The analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The method blank for preparation batch 400-446440 and analytical batch 400-446849 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The method blank for preparation batch 400-446440 and analytical batch 400-447351 contained 2-Methylnaphthalene, Pyrene and Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Case Narrative

Client: AECOM Technical Services Inc.
Project/Site: PreDesign Invest PW

Job ID: 400-172155-1

Job ID: 400-172155-1 (Continued)

Laboratory: Eurofins TestAmerica, Pensacola (Continued)

Method(s) 8270D LL: The surrogate recovery for the blank associated with preparation batch 400-446440 and analytical batch 400-447351 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 400-172155-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Indicates an Estimated Value for TICs
T	Result is a tentatively identified compound (TIC) and an estimated value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	562344,562345
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C IR-7
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	No time on COC, logged in per container labels.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Accreditation/Certification Summary

Comments
Revised Report
Report revised to correct TIC reporting for both the VOC and SVOC analysis due to evaluation error.
Supersedes report dated 7-25-19.

Receipt
The samples were received on 6/25/2019 8:37 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.0º C.

Receipt Exceptions

Collection times were not listed on the COC. Container labels were referenced.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-446984 recovered above the upper control limit for 2-Hexanone and Acetone. The sample associated with this CCV was non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 400-446984 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane, 2-Hexanone, Acetone, 4-Methyl-2-pentanone (MIBK) and Ethyl methacrylate. These analytes were biased high in the LCS and were not detected in the associated sample; therefore, the data have been reported.

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-4-SB-53-062419 (400-172155-3). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The laboratory control sample (LCS) for preparation batch 400-447082 and analytical batch 400-447049 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane, 2-Hexanone, 4-Methyl-2-pentanone (MIBK), Ethyl methacrylate and trans-1,3-Dichloropropene. These analytes were biased high in the LCS and were not detected in the associated sample; therefore, the data have been reported.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-062419 (400-172155-1). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine. The analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The method blank for preparation batch 400-446440 and analytical batch 400-446849 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The method blank for preparation batch 400-446440 and analytical batch 400-447351 contained

Job ID: 400-172155-1 (Continued)

Laboratory: Eurofins TestAmerica, Pensacola (Continued)

2-Methylnaphthalene, Pyrene and Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The surrogate recovery for the blank associated with preparation batch 400-446440 and analytical batch 400-447351 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: AECOM Technical Services Inc.
Job ID: 400-172155-1
Project/Site: PreDesign Invest PW

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	562344,562345
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C IR-7
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	No time on COC, logged in per container labels.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Roxana Predesign Soil Data Review

Laboratory SDG: 400-172224

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 7/22/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification	Sample Identification
TB-PW-062519-A	PD-8-SB-37-062519
PD-8-SB-37-062519-Dup	PD-8-SB-40-062519

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated SVOCs and PAHs were detected in the method blanks. Additionally, the RPDs between analytical results for PAHs in field duplicate pair PD-8-SB-37-062519/PD-8-SB-37-062519-Dup were outside evaluation criteria; therefore, results were qualified as estimated (**J**/**J**). These issues are addressed further in the appropriate sections of this data review.

Additionally, the laboratory case narrative indicated three of the 8260 VOCs (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount
MB 400-446440/1-A	SVOCs	bis(2-ethylhexyl) phthalate	53.8 µg/Kg
MB 400-446440/1-A	PAHs	Fluoranthene	2.71 µg/Kg
MB 400-446440/1-A	PAHs	2-Methylnaphthalene	2.22 µg/Kg
MB 400-446440/1-A	PAHs	Pyrene	53.8 µg/Kg

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the

associated blank concentration did not require qualification.

Sample ID	Parameter	Analyte	New Reporting Limit (RL)	Qualification
PD-8-SB-37-062519	PAHs	Pyrene	-	**U**
PD-8-SB-37-062519	SVOCs	bis(2-ethylhexyl) phthalate	-	**U**
PD-8-SB-37-062519-Dup	PAHs	Fluoranthene	-	**U**
PD-8-SB-37-062519-Dup	PAHs	Pyrene	-	**U**
PD-8-SB-37-062519-Dup	SVOCs	bis(2-ethylhexyl) phthalate	-	**U**
PD-8-SB-40-062519	SVOCs	bis(2-ethylhexyl) phthalate	-	**U**

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

No

LCS/LCSD ID	Parameter	Analyte	LCS/ LCSD Recovery	RPD	LCS/LCSD /RPD Criteria
400-447016/1002	VOCs	1,2-Dibromo-3-Chloropropane	**138**/NA	NA	54-135
400-447016/1002	VOCs	Ethyl methacrylate	**136**/NA	NA	68-130
400-447016/1002	VOCs	2-Hexanone	**138**/NA	NA	65-137
400-447016/1002	VOCs	1,1,1,2-Tetrachloroethane	**141**/NA	NA	67-131
400-447016/1002	VOCs	trans-1,3-Dichloropropene	**134/**NA	NA	63-130
400-447044/1-A	VOCs	Ethyl methacrylate	**136**/NA	NA	62-130
400-447044/1-A	VOCs	1,1,1,2-Tetrachloroethane	**132**/NA	NA	60-131
400-446440/4-A/5-A	SVOCs	Benzenethiol	**1/2**	12	10-120/30
400-446440/6-A	SVOCs	3,3'-Dichlorobenzidine	**172**	NA	42-120

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Sample ID	Parameter	Analyte	Qualification
PD-8-SB-37-062519	SVOCs	Benzenethiol	**UJ**
PD-8-SB-37-062519-Dup	SVOCs	Benzenethiol	**UJ**
PD-8-SB-40-062519	SVOCs	Benzenethiol	**UJ**

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

No

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
MB 400-446440/1-A	PAHs	2-Fluorobiphenyl	**128**	27-127
MB 400-446440/1-A	PAHs	Terphenyl-d_{14}	**161**	24-146

Method blank MB 400-446440/1-A is a quality control samples and does not require qualification. No qualification of data was required.

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

No

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

Yes

Field ID	Field Duplicate ID
PD-8-SB-37-062519	PD-8-SB-37-062519-Dup

Were field duplicate sample RPDs within evaluation criteria?

No

Field ID	Field Duplicate ID	Parameter	Analyte	RPD	Qualification
PD-8-SB-37-062519	PD-8-SB-37-062519-Dup	PAHs	1-Methylnaphthalene	**92**	**J/J**
PD-8-SB-37-062519	PD-8-SB-37-062519-Dup	PAHs	2-Methylnaphthalene	**91**	**J/J**

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; analytes were detected in samples that were diluted.

12.0 Additional Qualifications

Were additional qualifications applied?

No

No additional comments.

Receipt
The samples were received on 6/26/2019 8:57 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.9° C.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-447031 recovered outside acceptance criteria, low biased, for Acetone. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for preparation batch 400-447044 and analytical batch 400-447031 recovered outside control limits for the following analytes: 1,1,2,2-Tetrachloroethane and Ethyl methacrylate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 400-447016 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane, 2-Hexanone, trans-1,3-Dichloropropene and Ethyl methacrylate These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-8-SB-37-062519 (400-172224-2), PD-8-SB-37-062519-DUP (400-172224-3) and PD-8-SB-40-062519 (400-172224-4). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-062519-A (400-172224-1). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine. The analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The method blank for preparation batch 400-446440 and analytical batch 400-446849 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The method blank for preparation batch 400-446440 and analytical batch 400-447351 contained 2-Methylnaphthalene, Pyrene and Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The surrogate recovery for the blank associated with preparation batch 400-446440 and analytical batch 400-447351 was outside the upper control limits.

Job ID: 400-172224-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.9°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
Revised Report
Report revised to correct TIC reporting for both the VOC and SVOC analysis due to evaluation error.
Supersedes report dated 7-22-19.

Receipt
The samples were received on 6/26/2019 8:57 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.9º C.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-447031 recovered outside acceptance criteria, low biased, for Acetone. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for preparation batch 400-447044 and analytical batch 400-447031 recovered outside control limits for the following analytes: 1,1,2,2-Tetrachloroethane and Ethyl methacrylate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 400-447016 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane, 2-Hexanone, trans-1,3-Dichloropropene and Ethyl methacrylate These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-8-SB-37-062519 (400-172224-2), PD-8-SB-37-062519-DUP (400-172224-3) and PD-8-SB-40-062519 (400-172224-4). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-062519-A (400-172224-1). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine. The analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The method blank for preparation batch 400-446440 and analytical batch 400-446849 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The method blank for preparation batch 400-446440 and analytical batch 400-447351 contained 2-Methylnaphthalene, Pyrene and Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The surrogate recovery for the blank associated with preparation batch 400-446440 and analytical batch 400-447351

Job ID: 400-172224-1 (Continued)

Laboratory: Eurofins TestAmerica, Pensacola (Continued)

was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

List Number: 1
Creator: Conrady, Hank W

List Source: Eurofins TestAmerica, Pensacola

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.9°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Roxana Predesign Soil Data Review

Laboratory SDG: 400-172317

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 7/22/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

Sample Identification	Sample Identification
TB-PW-062619-A	PD-8-SB-51-062619
PD-8-SB-62-062619	--

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated PAH and SVOC surrogate recoveries were outside evaluation criteria in sample PD-8-SB-51-062619. VOC and SVOC LCS/LCSD recoveries were outside evaluation criteria. One SVOC and several PAHs were detected in the method blanks. These issues are addressed further in the appropriate sections of this data review.

Additionally, the laboratory case narrative indicated three of the 8260 VOCs (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount
MB 400-446440/1-A	SVOCs	bis(2-ethylhexyl) Phthalate	53.8 μg/Kg
MB 400-446440/1-A	PAHs	Fluoranthene	2.71 μg/Kg
MB 400-446440/1-A	PAHs	2-Methylnaphthalene	1.73 μg/Kg
MB 400-446440/1-A	PAHs	Pyrene	2.22 μg/Kg

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

No

LCS/LCSD ID	Parameter	Analyte	LCS/ LCSD Recovery	RPD	LCS/LCSD /RPD Criteria
LCS 400-447082/1-A	VOCs	1,2-dibromo-3-Chloropropane	**131**/NA	NA	49-130
LCS 400-447082/1-A	VOCs	Ethyl methacrylate	**134**/NA	NA	62-130
LCS 400-447082/1-A	VOCs	2-Hexanone	**132**/NA	NA	57-131
LCS 400-447082/1-A	VOCs	4-methyl-2-Pentanone	**131**/NA	NA	58-130
LCS 400-447082/1-A	VOCs	1,1,1,2-Tetrachloroethane	**140**/NA	NA	65-130
LCS 400-447082/1-A	VOCs	trans-1,3-Dichloropropene	**134**/NA	NA	60-130
LCS 400-446440/4-A/5-A	SVOCs	Benzenethiol	**1/2**	12	10-120/30
LCS 400-446440/6-A	SVOCs	3,3'-Dichlorobenzidine	**172**/NA	NA	42-120

Analytical data that required qualification based on LCS recovery outside evaluation criteria are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Sample ID	Parameter	Analyte	Qualification
PD-8-SB-51-062619	SVOCs	Benzenethiol	**UJ**
PD-8-SB-62-062619	SVOCs	Benzenethiol	**UJ**

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

No

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
PD-8-SB-51-062619	PAHs	Nitrobenzene-d_5	**650**	15-136
PD-8-SB-51-062619	SVOCs	2-Fluorophenol	**21**	25-128
PD-8-SB-51-062619	SVOCs	Nitrobenzene-d_5	**0**	15-136
PD-8-SB-51-062619	SVOCs	Phenol-d_5	**148**	29-130
MB400-446440/1-A	PAHs	2-Fluorophenol	**128**	27-127
MB400-446440/1-A	PAHs	Terphenyl-$d1_4$	**161**	24-146

Analytical data that required qualification based on surrogate recovery outside evaluation criteria are included in the table below. Qualifications due to surrogate

recoveries were not required if only one of three base/neutral fraction surrogate recoveries were outside evaluation criteria in the associated SVOC samples. Method blanks are quality control samples and do not require qualification.

Sample ID	Parameter	Analyte	Qualification
PD-8-SB-51-062619	SVOCs	Benzoic acid	**UJ**
PD-8-SB-51-062619	SVOCs	4-Chloro-3-methylphenol	**UJ**
PD-8-SB-51-062619	SVOCs	2-Chlorophenol	**UJ**
PD-8-SB-51-062619	SVOCs	2,4-Dichlorophenol	**UJ**
PD-8-SB-51-062619	SVOCs	2,4-Dimethylphenol	**UJ**
PD-8-SB-51-062619	SVOCs	4,6-Dinitro-ortho-cresol	**UJ**
PD-8-SB-51-062619	SVOCs	2,4-Dinitrophenol	**UJ**
PD-8-SB-51-062619	SVOCs	2-Methylphenol	**UJ**
PD-8-SB-51-062619	SVOCs	3 & 4 Methylphenol	**UJ**
PD-8-SB-51-062619	SVOCs	2-Nitrophenol	**UJ**
PD-8-SB-51-062619	SVOCs	4-Nitrophenol	**UJ**
PD-8-SB-51-062619	SVOCs	Pentachlorophenol	**UJ**
PD-8-SB-51-062619	SVOCs	Phenol	**UJ**
PD-8-SB-51-062619	SVOCs	2,4,5-Trichlorophenol	**UJ**
PD-8-SB-51-062619	SVOCs	2,4,6-Trichlorophenol	**UJ**

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

No

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

Yes

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples analyzed as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

No

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; analytes were detected in samples that were diluted.

12.0 Additional Qualifications

Were additional qualifications applied?

No

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 6/27/2019 9:21 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.0° C.

GC/MS VOA
Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-441311 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-8-SB-51-062619 (400-172317-2). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The laboratory control sample (LCS) for preparation batch 400-447082 and analytical batch 400-447049 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane, 2-Hexanone, 4-Methyl-2-pentanone (MIBK), Ethyl methacrylate and trans-1,3-Dichloropropene. These analytes were biased high in the LCS and were not detected in the associated sample; therefore, the data have been reported.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-062619-A (400-172317-1). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-8-SB-51-062619 (400-172317-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-446440 and analytical batch 400-446849 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine. The analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The method blank for preparation batch 400-446440 and analytical batch 400-446849 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-447251 recovered above the upper control limit for Hexachlorobenzene and 4-Nitrophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The following sample was diluted due to the nature of the sample matrix: PD-8-SB-51-062619 (400-172317-2). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: Surrogate recovery for the following sample was outside control limits: PD-8-SB-51-062619 (400-172317-2). Evidence

Case Narrative

of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8270D LL: The method blank for preparation batch 400-446440 and analytical batch 400-447351 contained 2-Methylnaphthalene, Pyrene and Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The surrogate recovery for the blank associated with preparation batch 400-446440 and analytical batch 400-447351 was outside the upper control limits.

Method(s) 8270D LL: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-8-SB-51-062619 (400-172317-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 400-172317-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
E	Result exceeded calibration range.
J	Indicates an Estimated Value for TICs
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
*	ISTD response or retention time outside acceptable limits
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

2,4-Dichlorophenol	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Diethyl phthalate	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
2,4-Dimethylphenol	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Dimethyl phthalate	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Di-n-butyl phthalate	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
4,6-Dinitro-ortho-cresol	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
2,4-Dinitrophenol	ND		990	290	ug/Kg		07/01/19 15:58	07/05/19 12:45	1

QC Sample Results

Client: AECOM Technical Services Inc.
Project/Site: PreDesign Invest PW

Job ID: 400-172317-1

Method: 8270D - Semivolatile Organic Compounds (GC/MS) (Continued)

Lab Sample ID: MB 400-446440/1-A
Matrix: Solid
Analysis Batch: 446849

Client Sample ID: Method Blank
Prep Type: Total/NA
Prep Batch: 446440

Analyte	MB Result	MB Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
2,4-Dinitrotoluene	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
2,6-Dinitrotoluene	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Di-n-octyl phthalate	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
1,4-Dioxane	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
1,2-Diphenylhydrazine (as Azobenzene)	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Hexachlorobenzene	ND		330	100	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Hexachlorocyclopentadiene	ND		330	66	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Hexachloroethane	ND		330	100	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Indene	ND		330	66	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
Isophorone	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
2-Methylphenol	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
3 & 4 Methylphenol	ND		660	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
2-Nitroaniline	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
3-Nitroaniline	ND		330	33	ug/Kg		07/01/19 15:58	07/05/19 12:45	1
