1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated the SVOC compound benzenethiol was detected in the method blank. The PAH LCS/LCSD RPD for pyrene was outside evaluation criteria. SVOC MS/MSD recoveries were outside evaluation criteria in sample PD-17-SB-55-071519. These issues are addressed further in the appropriate sections of this data review.

Additionally, the laboratory case narrative indicated three of the 8260 VOCs (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount
MB 400-448373/1-A	SVOCs	Benzenethiol	45.4 μg/Kg

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

No

LCS/LCSD ID	Parameter	Analyte	LCS/ LCSD Recovery	RPD	LCS/LCSD /RPD Criteria
400-448373/7-A/8-A	PAHs	Pyrene	62/88	**33**	53-122/30

Analytical data with LCSLCSD RPD alone outside evaluation criteria, did not require qualification. No qualification of data was required.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

Yes, although not requested sample PD-17-SB-55-071519 was spiked and duplicated for SVOCs.

Were MS/MSD recoveries within evaluation criteria?

No

MS/MSD ID	Parameter	Analyte	MS/MSD Recovery (%)	RPD	MS/MSD/ RPD Criteria

Analytical data that required qualification based on MS/MSD data are included in the table below. Analytical data associated with RPD alone outside evaluation criteria did not require qualification. Analytical data reported as non-detect and associated with MSMSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Receipt
The samples were received on 7/16/2019 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.4° C.

GC/MS VOA
Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-071519-A (400-173189-1). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-448890 recovered outside acceptance criteria, low biased, for 2-Chloroethyl vinyl ether. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-441311 was outside method criteria for the following analyte: Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-17-SB-45-071519 (400-173189-2) and PD-17-SB-55-071519 (400-173189-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-448563 recovered above the upper control limit for Benzenethiol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-448563 recovered above the upper control limit for N-Nitrosodimethylamine and 4-Nitrophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-448563 recovered outside acceptance criteria, low biased, for Bis(2-chloroethyl)ether, Benzyl alcohol, Nitrobenzene, Phenol, Isophorone, N-Nitrosodi-n-propylamine, 2,2'-oxybis[1-chloropropane], 1,2-Diphenylhydrazine (as Azobenzene), Pyridine and Bis(2-chloroethoxy)methane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D: The method blank for preparation batch 400-448373 and analytical batch 400-448563 contained Benzenethiol above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: PD-17-SB-55-071519 (400-173189-3). These results have been reported and qualified.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 400-448806 recovered above the upper control limit for Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 400-448373 and analytical batch 400-449887 recovered outside control limits for the following analytes: Pyrene.

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-448373 and analytical batch 400-448563 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-448373 and analytical batch 400-448563 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Revised Report
Report revised to correct TIC reporting for both the VOC and SVOC analysis due to evaluation error.
Supersedes report dated 8-2-19.

Receipt
The samples were received on 7/16/2019 9:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.4º C.

GC/MS VOA
Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-071519-A (400-173189-1). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-448890 recovered outside acceptance criteria, low biased, for 2-Chloroethyl vinyl ether. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-441311 was outside method criteria for the following analyte: Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-17-SB-45-071519 (400-173189-2) and PD-17-SB-55-071519 (400-173189-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-448563 recovered above the upper control limit for Benzenethiol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-448563 recovered above the upper control limit for N-Nitrosodimethylamine and 4-Nitrophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-448563 recovered outside acceptance criteria, low biased, for Bis(2-chloroethyl)ether, Benzyl alcohol, Nitrobenzene, Phenol, Isophorone, N-Nitrosodi-n-propylamine, 2,2'-oxybis[1-chloropropane], 1,2-Diphenylhydrazine (as Azobenzene), Pyridine and Bis(2-chloroethoxy)methane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D: The method blank for preparation batch 400-448373 and analytical batch 400-448563 contained Benzenethiol above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: PD-17-SB-55-071519 (400-173189-3). These results have been reported and qualified.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 400-448806 recovered above the upper control

limit for Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 400-448373 and analytical batch 400-449887 recovered outside control limits for the following analytes: Pyrene.

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-448373 and analytical batch 400-448563 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-448373 and analytical batch 400-448563 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated SVOC bis(2-ethylhexyl) phthalate was detected in the method blank. SVOC butyl benzyl phthalate was detected in the equipment blank. SVOC LCS/LCSD recoveries were outside evaluation criteria. SVOC MS/MSD recoveries and MS/MSD RPDs were outside evaluation criteria in sample PD-7-SB-27-071619. SVOC surrogates were outside criteria in two quality control samples. These issues are addressed further in the appropriate sections of this data review.

Additionally, the laboratory case narrative indicated three of the 8260 VOCs (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount

Receipt
The samples were received on 7/17/2019 8:58 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.0° C, 1.6° C and 2.1° C.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-448915 recovered above the upper control limit for 2-Hexanone. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 400-448915 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane and 2-Hexanone. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-PW-071619-A (400-173270-1) and PD-17-SB-27-071219-EB (400-173270-3). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, an acid-labile compound that degrades in an acidic medium.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-448890 recovered outside acceptance criteria, low biased, for 2-Chloroethyl vinyl ether. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-441311 was outside method criteria for the following analyte: Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 400-448720/1-A). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-448720 and analytical batch 400-449178 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449178 recovered above the upper control limit for Hexachloroethane, N-Nitrosodimethylamine, 2,4-Dimethylphenol and 2-Nitrophenol. The samples associated with this CCV were either non-detects or less than the reporting limit for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449178 recovered outside acceptance criteria, low biased, for Dibenz[a,h]acridine. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-448517 and analytical batch 400-448999 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method(s) 8270D: The method blank for preparation batch 400-448517 and analytical batch 400-448999 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-448517 and analytical batch 400-448999 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-448517 and analytical batch 400-448999 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-448999 recovered above the upper control limit for N-Nitrosodimethylamine and Bis(2-ethylhexyl) phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 400-448517 and analytical batch 400-449209: 3,3'-Dichlorobenzidine, Butyl benzyl phthalate and Bis(2-chloroethoxy)methane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (LCS 400-448720/2-A). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-448720 and analytical batch 400-449369 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine, Hexachlorobenzene and 4-Bromophenyl phenyl ether. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449178 recovered above the upper control limit for Benzenethiol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-448517 and analytical batch 400-449423 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 8270D LL: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 400-448517 and analytical batch 400-449423 recovered outside control limits for the following analytes: Benzo[k]fluoranthene.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 400-449815 recovered above the upper control limit for Benzo[g,h,i]perylene, Indeno[1,2,3-cd]pyrene and Dibenz(a,h)anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-448517 and analytical batch 400-449815 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Revised Report
Report revised to correct TIC reporting for the SVOC analysis due to evaluation error.
Supersedes report dated 8-6-19.

Receipt
The samples were received on 7/17/2019 8:58 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.0º C, 1.6º C and 2.1º C.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-448915 recovered above the upper control limit for 2-Hexanone. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 400-448915 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane and 2-Hexanone. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-PW-071619-A (400-173270-1) and PD-17-SB-27-071219-EB (400-173270-3). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, an acid-labile compound that degrades in an acidic medium.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-448890 recovered outside acceptance criteria, low biased, for 2-Chloroethyl vinyl ether. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-441311 was outside method criteria for the following analyte: Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 400-448720/1-A). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-448720 and analytical batch 400-449178 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449178 recovered above the upper control limit for Hexachloroethane, N-Nitrosodimethylamine, 2,4-Dimethylphenol and 2-Nitrophenol. The samples associated with this CCV were either non-detects or less than the reporting limit for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449178 recovered outside acceptance criteria, low biased, for Dibenz[a,h]acridine. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch

Job ID: 400-173270-1 (Continued)

Laboratory: Eurofins TestAmerica, Pensacola (Continued)

400-448517 and analytical batch 400-448999 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: The method blank for preparation batch 400-448517 and analytical batch 400-448999 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-448517 and analytical batch 400-448999 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-448517 and analytical batch 400-448999 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-448999 recovered above the upper control limit for N-Nitrosodimethylamine and Bis(2-ethylhexyl) phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 400-448517 and analytical batch 400-449209: 3,3'-Dichlorobenzidine, Butyl benzyl phthalate and Bis(2-chloroethoxy)methane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (LCS 400-448720/2-A). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-448720 and analytical batch 400-449369 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine, Hexachlorobenzene and 4-Bromophenyl phenyl ether. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449178 recovered above the upper control limit for Benzenethiol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-448517 and analytical batch 400-449423 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 8270D LL: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 400-448517 and analytical batch 400-449423 recovered outside control limits for the following analytes: Benzo[k]fluoranthene.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 400-449815 recovered above the upper control limit for Benzo[g,h,i]perylene, Indeno[1,2,3-cd]pyrene and Dibenz(a,h)anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D LL: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-448517 and analytical batch 400-449815 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Data Reviewer: Elizabeth Kunkel

Peer Reviewer: Jeff Aust

Date Reviewed: 8/12/2019

Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2017

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated the compounds bis(2-ethylhexyl) phthalate and fluoranthene were detected in the SVOC and PAH method blanks. VOC LCS recoveries were outside evaluation criteria. The SVOC surrogate phenol-d_5 was outside evaluation criteria in samples PD-7-SB-43-071819 and PD-7-SB-51-071819. Additionally, the RPD between analytical results for PAHs in field duplicate pair PD-7-SB-51-071819/PD-7-SB-51-071819-Dup was outside evaluation criteria; therefore, results were qualified as estimated (**J**/**J**). These issues are addressed further in the appropriate sections of this data review.

Additionally, the laboratory case narrative indicated three of the 8260 VOCs (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount
MB 400-449892/1-A	SVOCs	bis(2-ethylhexyl) phthalate	43.1 μg/Kg
MB 400-449132/1-A	SVOCs	Fluoranthene	1.97 μg/Kg

Qualifications due to blank contamination are included in the following table. Analytical

data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

Sample ID	Parameter	Analyte	New Reporting Limit (RL)	Qualification
PD-7-SB-51-071819	SVOCs	bis(2-ethylhexyl) Phthalate -RE	-	**U**
PD-7-SB-51-071819-Dup	SVOCs	bis(2-ethylhexyl) Phthalate -RE	-	**U**

5.0 Laboratory Control Sample

No

LCS/LCSD ID	Parameter	Analyte	LCS/ LCSD Recovery	RPD	LCS/LCSD /RPD Criteria
400-448915/1002	VOCs	2-Hexanone	**153**	NA	65-137

400-449049/2-A	VOCs	Vinyl chloride	**133**	NA	52-132

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

No

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
PD-7-SB-43-071819	SVOC	Phenol-d_5	**25**	29-130
PD-7-SB-51-071819	SVOC	Phenol-d_5	**8**	29-130

Qualifications due to surrogate recoveries were not required if only one of three acid fraction surrogate recoveries were outside evaluation criteria in the associated SVOC samples. No qualification of data was required.

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples analyzed as part of this SDG?

No

8.0 Internal Standard (IS) Recoveries

Receipt
The samples were received on 7/19/2019 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.5° C, 4.3° C and 4.5° C.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-448915 recovered above the upper control limit for 2-Hexanone. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 400-448915 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane and 2-Hexanone. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-071819-A (400-173406-1). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, an acid-labile compound that degrades in an acidic medium.

Method(s) 8260B: The laboratory control sample (LCS) for preparation batch 400-449049 and analytical batch 400-449025 recovered outside control limits for the following analytes: 1,1-Dichloroethene, 2-Butanone (MEK), Acrylonitrile, Methylene Chloride, trans-1,2-Dichloroethene and Vinyl chloride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-7-SB-43-071819 (400-173406-2), PD-7-SB-51-071819 (400-173406-3) and PD-7-SB-51-071819-DUP (400-173406-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method(s) 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 400-449132 and analytical batch 400-449369 recovered outside control limits for the following analytes: Benzenethiol.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449541 recovered above the upper control limit for Bis(2-ethylhexyl) phthalate, Butyl benzyl phthalate, 4,6-Dinitro-2-methylphenol and Di-n-octyl phthalate. The samples associated with this CCV were either non-detects or less then the reporting limit for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449541 recovered outside acceptance criteria, low biased, for Dibenz[a,h]acridine. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D: Surrogate recovery for the LCSD was outside the control limits: (LCSD 400-449132/5-A). All of the target compounds are within the acceptance criteria; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-450467 recovered above the upper control limit for Nitrobenzene, N-Nitrosodi-n-propylamine, 2,4-Dimethylphenol and 4-Nitrophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The method blank for preparation batch 400-449892 and analytical batch 400-450467 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction

and/or re-analysis of samples was not performed.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-450467 recovered outside acceptance criteria, low biased, for 2-Chloronaphthalene, 2,6-Dinitrotoluene and 2,4-Dinitrotoluene . A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D LL: The method blank for preparation batch 400-449132 and analytical batch 400-450726 contained Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-450762 recovered above the upper control limit for Diethyl phthalate, Hexachlorocyclopentadiene, Dibenzofuran, Dimethyl phthalate, 2-Chloronaphthalene, 4-Chlorophenyl phenyl ether and 2,4-Dinitrotoluene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: PD-7-SB-43-071819 (400-173406-2) and PD-7-SB-51-071819 (400-173406-3). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-449132 recovered outside control limits for the flagged analytes. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: PD-7-SB-51-071819-DUP (400-173406-4). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-449132 and analytical batch 400-449369 recovered outside control limits for most analytes. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported.

Method(s) 8270D LL: The method blank for preparation batch 400-449132 and analytical batch 400-450726 contained Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Revised Report
Report revised to correct TIC reporting for both the VOC and SVOC analysis due to evaluation error.
Supersedes report dated 8-12-19.

Receipt
The samples were received on 7/19/2019 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.5º C, 4.3º C and 4.5º C.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 400-448915 recovered above the upper control limit for 2-Hexanone. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 400-448915 recovered outside control limits for the following analytes: 1,1,1,2-Tetrachloroethane and 2-Hexanone. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-071819-A (400-173406-1). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, an acid-labile compound that degrades in an acidic medium.

Method(s) 8260B: The laboratory control sample (LCS) for preparation batch 400-449049 and analytical batch 400-449025 recovered outside control limits for the following analytes: 1,1-Dichloroethene, 2-Butanone (MEK), Acrylonitrile, Methylene Chloride, trans-1,2-Dichloroethene and Vinyl chloride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-7-SB-43-071819 (400-173406-2), PD-7-SB-51-071819 (400-173406-3) and PD-7-SB-51-071819-DUP (400-173406-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 400-449132 and analytical batch 400-449369 recovered outside control limits for the following analytes: Benzenethiol.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449541 recovered above the upper control limit for Bis(2-ethylhexyl) phthalate, Butyl benzyl phthalate, 4,6-Dinitro-2-methylphenol and Di-n-octyl phthalate. The samples associated with this CCV were either non-detects or less then the reporting limit for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449541 recovered outside acceptance criteria, low biased, for Dibenz[a,h]acridine. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D: Surrogate recovery for the LCSD was outside the control limits: (LCSD 400-449132/5-A). All of the target compounds are within the acceptance criteria; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-450467 recovered above the upper control limit for Nitrobenzene, N-Nitrosodi-n-propylamine, 2,4-Dimethylphenol and 4-Nitrophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Job ID: 400-173406-1 (Continued)

Laboratory: Eurofins TestAmerica, Pensacola (Continued)

Method(s) 8270D: The method blank for preparation batch 400-449892 and analytical batch 400-450467 contained Bis(2-ethylhexyl) phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-450467 recovered outside acceptance criteria, low biased, for 2-Chloronaphthalene, 2,6-Dinitrotoluene and 2,4-Dinitrotoluene . A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D LL: The method blank for preparation batch 400-449132 and analytical batch 400-450726 contained Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-450762 recovered above the upper control limit for Diethyl phthalate, Hexachlorocyclopentadiene, Dibenzofuran, Dimethyl phthalate, 2-Chloronaphthalene, 4-Chlorophenyl phenyl ether and 2,4-Dinitrotoluene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: PD-7-SB-43-071819 (400-173406-2) and PD-7-SB-51-071819 (400-173406-3). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-449132 recovered outside control limits for the flagged analytes. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: PD-7-SB-51-071819-DUP (400-173406-4). These results have been reported and qualified.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-449132 and analytical batch 400-449369 recovered outside control limits for most analytes. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported.

Method(s) 8270D LL: The method blank for preparation batch 400-449132 and analytical batch 400-450726 contained Fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated analytes were detected in the method blanks. SVOC LCS recoveries were outside evaluation criteria. SVOC surrogate recoveries were outside evaluation criteria in matrix spike sample PD-14-SB-45-072219. SVOC MS/MSD recoveries were outside evaluation criteria in sample PD-14-SB-45-072219. These issues are addressed further in the appropriate sections of this data review.

Additionally, the laboratory case narrative indicated three of the 8260 VOCs (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Receipt
The samples were received on 7/23/2019 9:09 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.8° C, 2.4° C and 2.7° C.

GC/MS VOA
Method(s) 8260B: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-072219-A (400-173530-1). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, an acid-labile compound that degrades in an acidic medium.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-14-SB-45-072219 (400-173530-2), PD-14-SB-49-072219 (400-173530-3), PD-14-SB-49-072219-DUP (400-173530-4) and PD-14-SB-55-072219 (400-173530-5). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-449615 was outside method criteria for the following analytes: 2 Ethyl 1 Hexanol, Ethylene Oxide, and Tert butyl formate. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449722 recovered above the upper control limit for Dibenz[a,h]acridine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449722 recovered above the upper control limit for N-Nitrosodimethylamine, 2,4,6-Trichlorophenol, 2,4-Dinitrophenol, 4-Nitrophenol, 2,4,5-Trichlorophenol, Diethyl phthalate, 2,6-Dinitrotoluene, 4-Chlorophenyl phenyl ether, Hexachlorobenzene, 2,4-Dichlorophenol, 4,6-Dinitro-2-methylphenol, 4-Bromophenyl phenyl ether and 2,4-Dimethylphenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449722 recovered outside acceptance criteria, low biased, for Bis(2-chloroethyl)ether and Quinoline. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-449523 and analytical batch 400-449722 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine, Hexachlorobenzene and 4-Nitroaniline. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 400-449523 and analytical batch 400-449722: Bis(2-chloroethoxy)methane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method(s) 8270D: Surrogate recovery for the following sample was outside control limits: (400-173530-D-2-A MS). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-449523 and analytical batch 400-449722 were outside control limits. Sample matrix interference is suspected.

Method(s) 8270D LL: The method blank for preparation batch 400-449523 and analytical batch 400-450940 contained

Benzo[a]anthracene, Benzo[a]pyrene and Benzo[b]fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 400-451066 recovered outside acceptance criteria, low biased, for Benzo[g,h,i]perylene and Indeno[1,2,3-cd]pyrene. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Revised Report
Report revised to correct TIC reporting for the SVOC analysis due to evaluation error.
Supersedes report dated 8-7-19.

Receipt
The samples were received on 7/23/2019 9:09 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.8º C, 2.4º C and 2.7º C.

GC/MS VOA
Method(s) 8260B: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-PW-072219-A (400-173530-1). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, an acid-labile compound that degrades in an acidic medium.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-14-SB-45-072219 (400-173530-2), PD-14-SB-49-072219 (400-173530-3), PD-14-SB-49-072219-DUP (400-173530-4) and PD-14-SB-55-072219 (400-173530-5). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-449615 was outside method criteria for the following analytes: 2 Ethyl 1 Hexanol, Ethylene Oxide, and Tert butyl formate. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449722 recovered above the upper control limit for Dibenz[a,h]acridine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449722 recovered above the upper control limit for N-Nitrosodimethylamine, 2,4,6-Trichlorophenol, 2,4-Dinitrophenol, 4-Nitrophenol, 2,4,5-Trichlorophenol, Diethyl phthalate, 2,6-Dinitrotoluene, 4-Chlorophenyl phenyl ether, Hexachlorobenzene, 2,4-Dichlorophenol, 4,6-Dinitro-2-methylphenol, 4-Bromophenyl phenyl ether and 2,4-Dimethylphenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 400-449722 recovered outside acceptance criteria, low biased, for Bis(2-chloroethyl)ether and Quinoline. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 400-449523 and analytical batch 400-449722 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine, Hexachlorobenzene and 4-Nitroaniline. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 400-449523 and analytical batch 400-449722: Bis(2-chloroethoxy)methane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method(s) 8270D: Surrogate recovery for the following sample was outside control limits: (400-173530-D-2-A MS). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-449523 and analytical batch 400-449722 were outside control limits. Sample matrix interference is suspected.

Job ID: 400-173530-1 (Continued)

Laboratory: Eurofins TestAmerica, Pensacola (Continued)

Method(s) 8270D LL: The method blank for preparation batch 400-449523 and analytical batch 400-450940 contained Benzo[a]anthracene, Benzo[a]pyrene and Benzo[b]fluoranthene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 400-451066 recovered outside acceptance criteria, low biased, for Benzo[g,h,i]perylene and Indeno[1,2,3-cd]pyrene. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

RE: PreDesign Invest. PW

WorkOrder: 19061617

Dear Elizabeth Kunkel:

TEKLAB, INC received 4 samples on 6/25/2019 5:00:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon
B -	Analyte detected in associated Method Blank
C -	RL shown is a Client Requested Quantitation Limit
E -	Value above quantitation range
H -	Holding times exceeded
I -	Associated internal standard was outside method criteria
J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response
ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits
S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

- # - Unknown hydrocarbon
- B - Analyte detected in associated Method Blank
- C - RL shown is a Client Requested Quantitation Limit
- E - Value above quantitation range

- I - Associated internal standard was outside method criteria
- J - Analyte detected below quantitation limits
- M - Manual Integration used to determine area response
- ND - Not Detected at the Reporting Limit
- R - RPD outside accepted recovery limits
- S - Spike Recovery outside recovery limits
- T - TIC(Tentatively identified compound)
- X - Value exceeds Maximum Contaminant Level

NELAP ACCREDITED TNI LABORATORY

RE: PreDesign Invest. PW

WorkOrder: 19061853

Dear Elizabeth Kunkel:

TEKLAB, INC received 8 samples on 6/27/2019 5:00:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Abbr Definition

*	Analytes on report marked with an asterisk are not NELAP accredited
CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
CRQL	A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.
DNI	Did not ignite
DUP	Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample is a sample matrix, free from the analytes of interest,spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	"The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
C - RL shown is a Client Requested Quantitation Limit	E - Value above quantitation range
H - Holding times exceeded	I - Associated internal standard was outside method criteria
J - Analyte detected below quantitation limits	M - Manual Integration used to determine area response
ND - Not Detected at the Reporting Limit	R - RPD outside accepted recovery limits
S - Spike Recovery outside recovery limits	T - TIC(Tentatively identified compound)
X - Value exceeds Maximum Contaminant Level

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated 2-methylnaphthalene was detected in the method blank. SVOC LCS/LCSD recoveries were outside evaluation criteria. SVOC surrogate recoveries for 2-fluorophenol and/or terphenyl d-14 was outside evaluation criteria in several samples. VOC and SVOC MS/MSD recoveries were outside evaluation criteria in sample PD-5-GWP-80-062819. VOC samples PD-8-GWP-52-062819 and PD-8-GWP-52-062819 were measured, post-analysis, at a pH > 2. Samples with pH >2, were collected in HCl preserved vials; however, since analysis was after 7 days, VOC results should be considered estimated. These issues are addressed further in the appropriate sections of this data review.

Additionally, the laboratory case narrative indicated three of the 8260 VOCs (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

Yes

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes

Blank ID	Parameter	Analyte	Concentration/ Amount

Receipt
The samples were received on 6/29/2019 9:19 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.3° C.

GC/MS VOA
Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-441311 was outside method criteria for the following analyte(s): Bromomethane As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-447677 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method(s) 8260B: The RPD for the matrix spike / matrix spike duplicate (MS/MSD) for 2-Chloroethyl vinyl ether was not calculable for analytical batch 400-447677 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

Method(s) 8260B: The sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following samples were analyzed after 7 days from sampling: PD-8-GWP-41-062819 (400-172422-4) and PD-8-GWP-52-062819 (400-172422-6).

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: PD-8-GWP-41-062819 (400-172422-4) and PD-8-GWP-52-062819 (400-172422-6). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-8-GWP-41-062819 (400-172422-4). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: PD-8-GWP-46-062819 (400-172422-5).

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-PW-062819-B (400-172422-1), PD-5-GWP-80-062819 (400-172422-2), PD-5-GWP-35-062819 (400-172422-3) and PD-8-GWP-46-062819 (400-172422-5). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-5-GWP-35-062819 (400-172422-3) and PD-8-GWP-46-062819 (400-172422-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The method blank for preparation batch 400-446728 and analytical batch 400-447502 contained 2-Methylnaphthalene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8270D LL: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate

compounds outside limits: (MB 400-446728/1-A). These results have been reported and qualified.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 400-447918 recovered above the upper control limit for 1-Methylnaphthalene, 2-Methylnaphthalene, Anthracene and Benzo[k]fluoranthene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: (CCVIS 400-447918/3).

Method(s) 8270D: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-446728 and analytical batch 400-447936 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: PD-5-GWP-80-062819 (400-172422-2[MS]), PD-5-GWP-80-062819 (400-172422-2[MSD]), PD-8-GWP-46-062819 (400-172422-5) and PD-8-GWP-52-062819 (400-172422-6). These results have been reported and qualified.

Method(s) 8270D: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 400-446728 and analytical batch 400-447936: Dibenz[a,h]acridine. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-446728 and analytical batch 400-447936 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-446728 and analytical batch 400-447936 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 8270D: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-5-GWP-35-062819 (400-172422-3). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 400-446728 and analytical batch 400-447502 recovered outside control limits for the following analytes: Pyrene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D LL: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-8-GWP-41-062819 (400-172422-4) and PD-8-GWP-46-062819 (400-172422-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Comments
Revised Report
Report revised to correct TIC reporting for both the VOC and SVOC analysis due to evaluation error.
Supersedes report dated 7-22-19.

Receipt
The samples were received on 6/29/2019 9:19 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.3º C.

GC/MS VOA
Method(s) 8260B: The initial calibration verification (ICV) analyzed in batch 400-441311 was outside method criteria for the following analyte(s): Bromomethane As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-447677 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method(s) 8260B: The RPD for the matrix spike / matrix spike duplicate (MS/MSD) for 2-Chloroethyl vinyl ether was not calculable for analytical batch 400-447677 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

Method(s) 8260B: The sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following samples were analyzed after 7 days from sampling: PD-8-GWP-41-062819 (400-172422-4) and PD-8-GWP-52-062819 (400-172422-6).

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: PD-8-GWP-41-062819 (400-172422-4) and PD-8-GWP-52-062819 (400-172422-6). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-8-GWP-41-062819 (400-172422-4). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: PD-8-GWP-46-062819 (400-172422-5).

Method(s) 8260B: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-PW-062819-B (400-172422-1), PD-5-GWP-80-062819 (400-172422-2), PD-5-GWP-35-062819 (400-172422-3) and PD-8-GWP-46-062819 (400-172422-5). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-5-GWP-35-062819 (400-172422-3) and PD-8-GWP-46-062819 (400-172422-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D LL: The method blank for preparation batch 400-446728 and analytical batch 400-447502 contained 2-Methylnaphthalene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Job ID: 400-172422-1 (Continued)

Laboratory: Eurofins TestAmerica, Pensacola (Continued)

Method(s) 8270D LL: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 400-446728/1-A). These results have been reported and qualified.

Method(s) 8270D LL: The continuing calibration verification (CCV) associated with batch 400-447918 recovered above the upper control limit for 1-Methylnaphthalene, 2-Methylnaphthalene, Anthracene and Benzo[k]fluoranthene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: (CCVIS 400-447918/3).

Method(s) 8270D: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-446728 and analytical batch 400-447936 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: PD-5-GWP-80-062819 (400-172422-2[MS]), PD-5-GWP-80-062819 (400-172422-2[MSD]), PD-8-GWP-46-062819 (400-172422-5) and PD-8-GWP-52-062819 (400-172422-6). These results have been reported and qualified.

Method(s) 8270D: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 400-446728 and analytical batch 400-447936: Dibenz[a,h]acridine. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method(s) 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-446728 and analytical batch 400-447936 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8270D: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-446728 and analytical batch 400-447936 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 8270D: The following sample was diluted to bring the concentration of target analytes within the calibration range: PD-5-GWP-35-062819 (400-172422-3). Elevated reporting limits (RLs) are provided.

Method(s) 8270D LL: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 400-446728 and analytical batch 400-447502 recovered outside control limits for the following analytes: Pyrene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D LL: The following samples were diluted to bring the concentration of target analytes within the calibration range: PD-8-GWP-41-062819 (400-172422-4) and PD-8-GWP-46-062819 (400-172422-5). Elevated reporting limits (RLs) are provided.
