ILLINOIS EPA RCRA CORRECTIVE ACTION CERTIFICATION

This certification must accompany any document submitted to Illinois EPA in accordance with the corrective action requirements set forth in a facility's RCRA permit. The original and two copies of all documents submitted must be provided.

1.0 Facility Identification

Name: Equilon Enterprises LLC d/b/a/ SOPUS
County: Madison
Street Address: 900 South Central Ave
Site No. (IEPA): 1191150002
City: Roxana
Site No. (USEPA): ILD080 012 305

2.0 Owner Information

Name: Not Applicable
Mail Address:
City:
State: Zip Code:
Contact Name:
Contact Title:
Phone:

3.0 Operator Information

Name: Equilon Enterprises LLC d/b/a/ SOPUS
Mail Address: 128 East Center Street
City: Nazareth
State: PA Zip Code: 18064
Contact Name: Leroy Bealer
Contact Title: Principal Program Manager
Phone: 484-632-7955

4.0 Type of Submission (check applicable item and provide requested information, as applicable)

☐ RFI Phase I Workplan/Report
☐ RFI Phase II Workplan/Report
☐ CMP Report;
☒ Other (describe): Response to TACO Tier 3 Demonstration 10/1/2020 IEPA Comment Letter

IEPA Permit Log No. B-43R
Date of Last IEPA Letter on Project: October 1, 2020
Log No. of Last IEPA Letter on Project: B-43R-CA-95, CA-98

Does this submittal include groundwater information: ☒ Yes ☐ No

Date of Submittal: January 4, 2022

5.0 Description of Submittal: (briefly describe what is being submitted and its purpose)

Response to IEPA comments regarding the TACO Tier 3 Demonstration submittal

6.0 Documents Submitted (identify all documents in submittal, including cover letter; give dates of all documents)

Cover letter, RCRA Corrective Action Certification, and Response to comments including text, tables, figures and attachments. Copy of submittal also sent directly to C. Hawbaker, R. Watson, and A. Butler of IPEA.

7.0 Certification Statement

(This statement is part of the overall certification being provided by the owner/operator, professional and laboratory in Items 7.1, 7.2 and 7.3 below). The activities described in the subject submittals have been carried out in accordance with procedures approved by Illinois EPA. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

For: Response to ~~IEPA~~ TACO Tier 3 Demonstration 10/1/2020 IEPA Comment Letter

Date of Submission: January 4, 2022

7.1 Owner/Operator Certification

(Must be completed for all submittals. Certification and signature requirements are set forth in 35 IAC 702.126.) All submittals pertaining to the corrective action requirements set forth in a RCRA Permit must be signed by the person designated below (or by a duly authorized representative of that person):

1. For a Corporation, by a principal executive officer of at least the level of vice president.
2. For a Partnership or Sole Proprietorship, by a general partner or the proprietor, respectively.
3. For a Governmental Entity, by either a principal executive officer or a ranking elected official.

A person is a duly authorized representative only if:

1. the authorization is made in writing by a person described above; and
2. the written authorization is provided with this submittal (a copy of a previously submitted authorization can be used).

Title: _____

Operator Signature: _____ Date: 1/4/2022

Title: Principal Program Manager

For: Response to TACO Tier 3 Demonstration 10/1/2020 IEPA Comment Letter

Date of Submission: January 4, 2022

7.2 Professional Certification (if necessary)

Work carried out in this submittal or the regulations may also be subject to other laws governing professional services, such as the Illinois Professional Land Surveyor Act of 1989, the Professional Engineering Practice Act of 1989, the Professional Geologist Licensing Act, and the Structural Engineering Licensing Act of 1989. No one is relieved from compliance with these laws and the regulations adopted pursuant to these laws. All work that falls within the scope and definitions of these laws must be performed in compliance with them. The Illinois EPA may refer any discovered violation of these laws to the appropriate regulating authority.

Any person who knowingly makes a false, fictitious, or fraudulent material statement, orally or in writing, to the Illinois EPA commits a Class 4 felony. A second or subsequent offense after conviction is a Class 3 felony. (415 ILCS 5/44 (h))

Response to TACO Tier 3 Demonstration 10/1/2020 IEPA Comment Letter
Equilon Enterprises LLC d/b/a Shell Oil Products US
Roxana, Illinois
1191150002 - Madison County (ILD080012305)
Log No. B-43R-CA-95, CA-98

Dear Mr. Smith;

AECOM Technical Services, Inc. (AECOM), on behalf of Equilon Enterprises LLC d/b/a Shell Oil Products US (SOPUS), is providing this letter in response to the Illinois Environmental Protection Agency's (IEPA's) October 1, 2020 letter. In that letter, IEPA neither approved or denied the TACO Tier 3 Demonstration submittals and did provide conditions and modifications to the submittals. Enclosed, please find specific responses to each of IEPA's comments in their October 1, 2020 letter along with supporting tables, figures and attachments.

If you have any questions concerning this submittal, please contact Leroy (Buddy) Bealer, SOPUS Principal Program Manager, at (484) 632-7955 or leroy.bealer@shell.com, or me at (314) 452-8929 or wendy.pennington@aecom.com.

Sincerely,

Wendy Pennington, PE
Project Manager

IEPA Comment 1:

> *Groundwater concentrations from Roxana Interim Groundwater Monitoring Reports for Second Quarter 2018 to present were compared to values published in Appendix B, Table H, of 35 Ill. Adm. Code Part 742, and there continues to be a potential for vapor migration after shutdown of the SVE system. Therefore, any future proposal must maintain the SVE system in areas of concern until the groundwater concentrations have been reduced to levels consistent with applicable standards at groundwater monitoring wells within the Village of Roxana.*

SOPUS Response:

The comment is acknowledged. The SVE system remains operational and will remain so until closure criteria are reached (additional information will be presented/proposed in the Steam Enhanced Extraction (SEE) Proposal and Effectiveness Report). Although a few groundwater concentrations are above the referenced screening criteria, multiple lines of evidence support a conclusion that there currently is not a potential for vapor migration after shutdown of the SVE system, some of which include:

- A vapor intrusion investigation was performed at several homes throughout the Village of Roxana in 2011 and 2012 and found **no evidence of vapor intrusion.**

- SVE system has removed over 3,000 tons of total mass and **created a significant zone of remediated soil that is now effective as a barrier** between groundwater and vapor intrusion. The SVE system has been operating for approximately 10 years, during which time soil gas has been remediated from the surface through the intermediate zone (i.e., to a depth of approximately 20 feet below ground surface [bgs]). Even though concentrations have been detected in a few soil vapor samples collected at depth (i.e., below 20 feet bgs shallow soil vapor data at these locations show that attenuation mechanisms decrease concentrations to below remedial objectives (ROs) at shallow depths, demonstrating that the vapor intrusion pathway is not complete.

- Groundwater concentrations in the Village of Roxana between 3rd quarter 2018 (3Q18) and 2nd quarter 2021 (2Q21) were evaluated with respect to the values published in Appendix B, Table H of 35 IAC Part 742 (Table H). A total of 23 locations were sampled during this time; **only the 6 locations shown in the table below had concentrations above the residential screening values** (17 of these locations exhibited no exceedances). The areas where groundwater is above the screening values is at the Roxana Public Works Yard and in the vicinity of 4th Street and Chaffer Avenue (the SVE system is currently operating in these areas). Groundwater concentrations in the vicinity of 4th Street and Chaffer Avenue have been trending downward since late 2015. Groundwater concentrations have been trending downward in the western portion of the Roxana Public Works Yard and trending upward in the eastern portion; demonstrating the WRR Water Production System is pulling water and dissolved phase contamination eastward, toward the interior of the facility. Contamination in the Roxana Public Works Yard vicinity will be further addressed with the implementation of the proposed SEE system. **Table 1** shows groundwater analytical results screened against the remediation objectives for the indoor inhalation exposure route values on Table H. **Figure 1** shows the locations of the groundwater monitoring wells with the wells above groundwater remediation objectives for the indoor inhalation exposure route values highlighted.

Well ID	Location	Average Depth to Water (ft btoc)	Constituent	Quarter(s)	Exceedance Results (mg/L)	Table H GW ROs (mg/L)
MW-2	Corner of Chaffer and alley between 6th and 7th St	39.89	Ethylbenzene	2Q19, 3Q19, 4Q19, 2Q20	0.63 – 1.2	0.37
MW-7	Public Works Yard along 8th St	38.41	Benzene	3Q18 through 2Q21	530 – 2,200	0.11
			Ethylbenzene	3Q19	0.52 J	0.37
MW-8	Public Works Yard (lower)	29.83	Benzene	3Q18 through 2Q21	29 – 840	0.11
			Ethylbenzene	3Q19, 4Q19	0.4 J and 0.54	0.37
			Naphthalene	4Q19	1.2	0.075
MW-22	4th St midway between Chaffer and Route 111	37.62	Benzene	3Q18, 2Q19	0.22 – 0.79	0.11
			Ethylbenzene	3Q18, 4Q18, 1Q19, 2Q19, 2Q21	0.53 – 2	0.37
			Naphthalene	3Q18, 4Q18, 1Q19, 2Q19	0.14 – 0.21	0.075
ROST-4-PZ(C)	3rd St west of Chaffer	37.93	Naphthalene	3Q19, 1Q21	0.089 and 0.092	0.075
ROST-4-PZ(E)	Chaffer south of 3rd St	37.26	Benzene	3Q19 1Q21	0.11 and 0.19	0.11
			Ethylbenzene	4Q19, 2Q20, 3Q20, 4Q20, 1Q21, 2Q21	0.39 – 0.52	0.37
			Naphthalene	3Q19, 4Q19, 1Q20, 2Q20, 3Q20, 4Q20, 1Q21, 2Q21	0.094 – 0.16	0.075

J = Concentration is estimated

- The EPA June 2015 *Technical Guide for Addressing Petroleum Vapor Intrusion at Leaking Underground Storage Tank Sites*[1] and the June 2015 *OSWER Technical Guide for Assessing and*

[1] Unites States Environmental Protection Agency (USEPA), June 2015; *Technical Guide for Addressing Petroleum Vapor Intrusion at Leaking Underground Storage Tank Sites*.

Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air[2] both discuss vertical separation distances for buildings. These referenced technical guides state that "additional investigation is generally unnecessary if the vertical separation is greater than 6 feet for dissolved phase contamination beneath buildings of any size…" Throughout the Village of Roxana, the groundwater table is located at least about 20 to 25 feet below the lowest possible building foundation (refer to the Depth to Water column in **Table 1**). These documents also discuss low-permeability layers above the groundwater table impeding or preventing upward migration of vapors from deeper sources in the vadose zone. The upper 4 to 6 feet of subsurface in the 4th Street and Chaffer Ave vicinity as well as at the Public Works Yard consist of clay and/or silt. This material is underlain by sand which starts as fine grained with silty and clayey zones and coarsens with depths below the water table.

SVE system operations at the Roxana Public Works Yard (PWY) will be suspended during the construction and installation of the Steam Enhanced Extraction (SEE) system, at which time the current network of PWY SVE wells will be abandoned. SVE operations at the PWY will be replaced by SEE operations upon startup of the proposed system. The SEE system proposal and/or effectiveness report will include a plan for SVE system shutdown after completion of SEE operations. This plan may include a rebound test to shut down SVE operation and monitor for one year. This rebound monitoring program could include triggers for increased monitoring and SVE system restart should Site conditions change. The SVE system would be maintained such that a timely restart during the rebound monitoring period would be possible.

Given the information provided above, it is requested that groundwater no longer be considered a source for potential vapor intrusion.

IEPA Comment 2:

The indoor air calculations evaluate methyl-tert-butyl ether (MTBE) and 1,1,2- trichloroethane as carcinogens.

35 III. Adm. Code 742.200 defines a carcinogen as a contaminant that is classified as a category A1 or A2 carcinogen by the American Conference of Governmental Industrial Hygienists; a category 1 or 2A/2B carcinogen by the World Health Organization's International Agency for Research on Cancer; a "human carcinogen" or "anticipated human carcinogen" by the United States Department of Health and Human Service National Toxicological Program; or a category A or B1/B2 carcinogen or as "carcinogenic to humans" or "likely to be carcinogenic to humans" by the (United States Environmental Protection Agency in the integrated risk information system or a final rule issued in a Federal Register notice by the USEFA). [415 ILCS 5/58.2]

MTBE is classified as an "A3" carcinogen by the American Conference of Governmental Industrial Hygienists, and a "3" carcinogen by the World Health Organization's International Agency for Research on Cancer.

[2] USEPA, June 2015; *OSWER Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air*.

1,1,2-trichloroethane is classified as an "A3" carcinogen by the American Conference of Governmental Industrial Hygienists, a "3" carcinogen by the World Health Organization's International Agency for Research on Cancer and a "C" carcinogen by the United States Environmental Protection Agency in the integrated risk information system.

Neither of these chemicals meet the definition of a carcinogen provided in both 35 Ill. Adm. Code 742 and 415 ILCS. When evaluating MTBE and 1,1,2-trichloroethane as non-carcinogens, the appropriate indoor air remediation objectives are 3.1 mg/m^3 and 0.00021 mg/m^3, respectively.

SOPUS Response:

The comment is acknowledged. As recommended, the non-carcinogen TACO indoor air ROs have been updated for MTBE and 1,1,2-trichloroethane using 3.1 mg/m^3 and 0.00021 mg/m^3, respectively, (Refer to **Appendix 2-B, Table 1 – rev. 1** in **Attachment 1**). Based on the recalculations, there are no changes to the initial conclusion:

- Soil gas data were compared to the Tier 3 ROs, and the data for petroleum hydrocarbons in the residential area meet these objectives in the shallow zone (0-10 feet bgs). In certain areas, site data exceeded the objectives at depth (below 20 feet bgs). These results do not pose a concern as attenuation mechanisms decrease concentrations to below the objectives at shallower depths.

IEPA Comment 3:

The indoor air carcinogen calculation for 1,2-dichloropropane uses an incorrect value of 3.7E-05 (ug/m^3)$^{-1}$ for the inhalation unit risk factor (URF). The proper value is 3.7E-06 (ug/m^3)$^{-1}$. Using the correct URF value in the calculation, the indoor air remediation objective for 1,2-dichloropropane is 0.00066 mg/m^3.

SOPUS Response:

The comment is acknowledged. The RO for 1,2-dichloropropane has been recalculated using 3.7E-06 as the inhalation URF (Refer to **Appendix 2-B, Table 1 – rev. 1** in **Attachment 1**). Based on the recalculations, there are no changes to the initial conclusion:

- Soil gas data were compared to the Tier 3 ROs, and the data for petroleum hydrocarbons in the residential area meet these objectives in the shallow zone (0-10 feet bgs). In certain areas, site data exceeded the objectives at depth (below 20 feet bgs). These results do not pose a concern as attenuation mechanisms decrease concentrations to below the objectives at shallower depths.

IEPA Comment 4:

The chloroform calculation uses a dimensionless henry's constant (H') value of 1.5E-01. This value is associated with a system temperature of 25° C. Per 35 Ill. Adm. Code 742.717(h), the default henry's constant system temperature for the indoor inhalation exposure route is 13°C. The appropriate chloroform H' value at 13° C is 9.18E-02. The value is provided at 35 III. Adm. Code 742, Appendix C, Table E.

SOPUS Response:

The comment is acknowledged. The RO for chloroform has been recalculated using 9.18E-02 as the dimensionless Henry's Law Constant as associated with a system temperature of 13 °C (Refer to **Appendix 2-B, Table 1 – rev. 1** in **Attachment 1**). Based on the recalculations, there are no changes to the initial conclusion:

- Soil gas data were compared to the Tier 3 ROs, and the data for petroleum hydrocarbons in the residential area meet these objectives in the shallow zone (0-10 feet bgs). In certain areas, site data exceeded the objectives at depth (below 20 feet bgs). These results do not pose a concern as attenuation mechanisms decrease concentrations to below the objectives at shallower depths.

IEPA Comment 5:

The vinyl chloride calculation uses a diffusivity in air (D_i) value of 1.1E-01 cm^2/s, a diffusivity in water (D_w) value of 1.20E-05 cm^2/s, and a henry's constant (H^1) value of 1.14E+00. These values are not consistent with the values provided in 35 Ill, Adm. Code 742, Appendix C, Table E. The Appendix C, Table E values are:

Parameter	*Value*	*Units*
D_i	*1.06E-01*	cm^2/s
D_w	*1.23E-06*	cm^2/s
H^1	*8.14E-01*	*unitless*

The Illinois EPA notes the values utilized are values presented for the USEPA's regional screening level (RSL) chemical and physical parameters.

SOPUS Response:

The comment is acknowledged. The RO for vinyl chloride has been recalculated using the input parameters provided by IEPA in the table above (Refer to **Appendix 2-B, Table 1 – rev. 1** in **Attachment 1**). Based on the recalculations, there are no changes to the initial conclusion:

- Soil gas data were compared to the Tier 3 ROs, and the data for petroleum hydrocarbons in the residential area meet these objectives in the shallow zone (0-10 feet bgs). In certain areas, site data exceeded the objectives at depth (below 20 feet bgs). These results do not pose a concern as attenuation mechanisms decrease concentrations to below the objectives at shallower depths.

IEPA Comment 6:

The following table lists non-TACO chemicals utilizing a henry's constant value set at a system temperature of 25° C. The henry's constant system temperature for the indoor inhalation exposure route is 13° C. The corrected henry's constant values using a system temperature of 13° C are as follows:

Chemical	***Proposed H1 at 25° C***	***Corrected H1 at 13° C***
Benzyl Chloride	*1.7E-02*	*8.21E-03*
1,3-Butadiene	*3.01E+00*	*2.18E+00*
Chloromethane	*3.61E-01*	*2.69E-01*
Cyclohexane	*6.13E+00*	*3.64E+00*
Ethyl Chloride	*4.54E-01*	*3.12E-01*
Hexachlorobutadiene	*4.21E-01*	*1.77E-01*
Hexane	*7.36E+01*	*4.45E+01*
2-Hexanone	*3.81E-03*	*1.93E-03*
4-Methyl-2-pentanone	*1.38E-04*	*2.93E-03*
Isopropanol	*3.31E-04*	*1.41E-04*
n-Propylbenzene	*4.29E-01*	*2.00E-01*
1,1,2,2-Tetrachloroethylene	*1.50E-02*	*7.43E-03*
Tetrahydrofuran	*2.88E-03*	*1.74E-03*
1,1,2-Trichloro-1,2,2-trifluoroethane	*2.15E+02*	*1.37E+01*
1,2,4-Trimethylbenzene	*2.52E-01*	*1.15E-01*
1,3,5-Trimethylbenzene	*3.59E-01*	*1.64E-01*

The Illinois EPA wishes to clarify data for the enthalpy of vaporization at the normal boiling point ($H_{v,b}$) for n-Heptane is not available; therefore, a henry's constant value of 8.18E+01 at 25°C must be used.

SOPUS Response:

The comment is acknowledged. The ROs for the chemicals listed in IEPA Comment 6 above have been recalculated using the provided corrected dimensionless Henry's Law Constants associated with a system temperature of 13 ^{o}C (Refer to **Appendix 2-B, Table 1 – rev. 1** in **Attachment 1**). Based on the recalculations, there are no changes to the initial conclusion:

- Soil gas data were compared to the Tier 3 ROs, and the data for petroleum hydrocarbons in the residential area meet these objectives in the shallow zone (0-10 feet bgs). In certain areas, site data exceeded the objectives at depth (below 20 feet bgs). These results do not pose a concern as attenuation mechanisms decrease concentrations to below the objectives at shallower depths.

IEPA Comment 7:

The Tier 3 evaluation proposes a dirt floor residential building scenario, with a basement foundation extending to 7 feet (2.13 meters) below ground surface (bgs). The Illinois EPA provides the following comments regarding the proposed building parameters:

a. When using a building parameter value other than a default value listed in 35 Ill. Adm. Code 742, Appendix C, Table L, an institutional control stating buildings may not be present above the contamination plume that are smaller than the proposed building parameters used to calculate the remediation objectives is necessary. To avoid any institutional controls for the area of concern, the

Illinois EPA recommends using the default value of 2.0 meters for the distance from the ground surface to the bottom of the basement slab (LF) value.

b. The calculations use a building height of 2.44 meters. The 2.44-meter building height value is associated with a slab-on-grade building. Per 35 Ill. Adm. Code 742, Appendix C, Table M, the appropriate building height for a basement foundation building is 4.27 meters.

c. The calculations use a slab footprint value of 100 m^2. The Illinois EPA wishes to clarify the parameter represents the surface area of the enclosed space at or below grade, and is represented by the symbol "A_B" at Section 742, Appendix C, Tables L and M. To calculate an appropriate basement "A_S" value for use in the proposed equations. Appendix C, Table L provides equation J&E12b for calculating the values for a basement building scenario. The equation is:

$$A_B = (L_B \times W_B) + (2 \times L_F \times L_B) + (2 \times L_F \times W_B)$$

Using the proposed building length (L_B) and width (W_B), and the recommended 2.0-meter default distance between the ground surface to the bottom of the slab (L_F), the appropriate "A_B" value for use in the calculation is 180 m^2.

d. The calculations propose a building ventilation rate (Q_{bldg}) of 129 m^3/hr, or 3.59E+04 cm^3/s. The Illinois EPA wishes to clarify the proposed value is appropriate for slab-on-grade buildings, not basement buildings. The appropriate Q_{bldg} value for a basement scenario when using the Illinois EPA default 2.0 meter L_F value is 226 m^3/hr or 6.28E+04 cm^2/s. This value is available at 35 III. Adm. Code 742, Appendix C, Table M.

SOPUS Response:

The comment is acknowledged. The ROs have been recalculated using 2.0 m for the distance between the ground surface to the bottom of the slab, 4.27 m for the building height for a basement foundation building, 180 m^2 as the surface area of the enclosed space at or below grade, and 226 m^3/hr as the building ventilation rate per the updated building dimensions (Refer to **Appendix 2-B, Table 1 – rev. 1** in **Attachment 1**). Based on the recalculations, there are no changes to the initial conclusion:

- Soil gas data were compared to the Tier 3 ROs, and the data for petroleum hydrocarbons in the residential area meet these objectives in the shallow zone (0-10 feet bgs). In certain areas, site data exceeded the objectives at depth (below 20 feet bgs). These results do not pose a concern as attenuation mechanisms decrease concentrations to below the objectives at shallower depths.

IEPA Comment 8:

The following chemicals may be excluded from further consideration, as the chemical concentrations do not exceed the applicable residential indoor inhalation exposure route remediation objectives for all depths sampled:

- *Acetone*
- *2-Butanone*
- *Carbon Disulfide*

- *Chlorodibromomethane*
- *Chloroethane*
- *Cyclohexane*
- *1,2-Dichlorobenzene*
- *1,1 -Dichloroethane*
- *1,1 -Dichloroethylene*
- *cis-1,2-Dichloroethvlene*
- *trans-1,2-Dichioroethylene*
- *Isopropylbenzene (Cumene)*
- *4-Methyl-2-Petanone (MIBK)*
- *Methyl-tert-Butyl-Ether (MTBE)*
- *n-Propylbenzene*
- *Styrene*
- *Tetrahydrofuran*
- *Toluene*
- *1,1,1 -Trichloroethane*
- *Trichlorofluoromethane*
- *1,2,2-Trichloro-1,2,2-Trifluoroethane (Freon 113)*

SOPUS Response:

The comment is acknowledged. The chemicals listed in IEPA Comment 8 above will be excluded from consideration going forward and removed from the TO-15 analysis list going forward.

Based on the modeling information provided in the original Tier 3 Demonstration submittal, a total of ten constituents were identified as Chemicals of Potential Concern (COPCs). Based on the comments provided in IEPA Comment 8, the following eight constituents remain as the COPCs:

COPCs	Recalculated RO (mg/m^3)
Benzene	0.17
Ethylbenzene	0.61
Hexane	470
Naphthalene	0.05
1,2,4-Trimethylbenzene	48
1,3,5-Trimethylbenzene	49
o-Xylenes	56
m,p-Xylenes	63

The recalculated ROs for the COPCs listed above were compared to recent site data (1st quarter 2015 [1Q15] through 1st quarter 2021 [1Q21]). This timeframe was chosen because it incorporates the timeframe presented in the original Tier 3 Demonstration submittal (1Q15 through 4Q16) and extends to include the more recent data collected (1Q17 through 1Q21). This comparison for the residential scenario is shown on the revised charts from the original Tier 3 Demonstration in **Attachment 2** [Chart 1 (rev. 1), Chart 3 (rev. 1), Chart 4 (rev. 1), Chart 6 (rev. 1), Chart 7 (rev. 1),

Chart 8 (rev. 1), and Chart 9, (rev. 1)][3]. These charts show that no sample collected at depths shallower than 10 feet bgs had concentrations exceeding the recalculated Tier 3 ROs with 3 exceptions that are considered outliers (one-time events with concentrations close to the recalculated RO – no action is proposed for these locations):

- Benzene detected at 0.18 mg/m3 at VMP-63 in the 10 ft bgs port in 1Q21
- Ethylbenzene detected at 0.63 mg/m3 at VMP-4 in the 5 ft bgs port in 2Q16
- Ethylbenzene detected at 0.79 mg/m3 at VMP-2 in the 5 ft bgs port in 1Q15

Attachment 3 contains the soil vapor analytical results within the Village of Roxana and the Roxana Public Works Yard screened against the recalculated ROs for 1Q15 through 1Q21.

Given the information provided above, it is requested that these eight (8) COPCs be used for decision making purposes.

IEPA Comment 9:

The facility collected and analyzed several soil gas samples from 5 feet bgs. Samples collected from the 5-foot depth demonstrate contaminated soil gas has migrated above the proposed basement floor. In other words, no vertical separation or transport distance between the basement floor and contaminated soil gas exists.

When no vertical separation exists between the soil gas sample depth and the bottom of the proposed basement floor, the D_{source} value should set at 1 cm below the foundation floor depth. This will result in a distance between the source and foundation (L_T) of 1 cm. When using a L_T value of 1 cm, soil gas sample concentrations from the most recent sample event that demonstrate exceedances of residential remediation objectives at 5 feet bgs are as follows:

Bromodichloromethane exceeds the residential remediation objective of 0.0005 mg/m^3 at the following sample point:

Location	***Concentration (mg/m^3)***
VMP-47	*0.0018*

Chloroform exceeds the residential remediation objective of 0.00044 mg/m^3 at the following sample points:

Location	***Concentration (mg/m^3)***
VMP-1	*0.0068*
VMP-6	*0.0069*
VMP-7	*0.0021*
VMP-8	*0.00097*
VMP-9	*0.0014*
VMP-23	*0.003*

[3] Naphthalene has not been nor is it currently included as an analyte in the soil vapor monitoring program; therefore, there is no chart provided to depict the comparison for the residential scenario.

VMP-24	*0.0013*
VMP-32	*0.0031*
VMP-47	*0.0046*
VMP-64	*0.0009*

Ethylbenzene exceeds the residential remediation objective of 0.0056 mg/m3 at the following sample points:

Location	***Concentration (mg/m^3)***
VMP-1	*0.068*
VMP-4	*0.061*
VMP-63	*0.025*

Naphthalene exceeds the residential remediation objective of 0.00053 mg/m^3 at the following sample point:

Location	***Concentration (mg/m^3)***
VMP-24	*0.00058*

In addition, several chemicals' method detection limits exceed the residential remediation objectives at the 5-foot sample depth. As a result, the Illinois EPA cannot determine if the remediation objectives are met. The following table is a list of chemicals with method detection limits exceeding remediation objectives at 5 feet bgs. Due to the number of locations where the method detection limits exceed the remediation objectives, the below table provides the chemical and the remediation objective that the method detection limit must meet for the chemical when analyzed for soil gas from 5 feet bgs:

Chemical	***R.O. for 1 cm L_T (mg/m^3)***
Benzene	*0.0015*
Bromodichloromethane	*0.00051*
Bromoform	*0.064*
Bromomethane	*0.031*
1,3-Butadiene	*0.00035*
Carbon Tetrachloride	*0.0023*
Chloroform	*0.00044*
1,2-Dibromoethane	*0.000040*
1,4-Dichlorobenzene	*0.0014*
1,2-Dichloroethane	*0.0039*
1,2-Dichloropropane	*0.0037*
1,3-Dichloropropylene (cis+trans)	*0.0042*
1,4-Dioxane	*0.00088*
Ethylbenzene	*0.0056*
Naphthalene	*0.00053*
Hexachlorobutadiene	*0.0018*
2-Hexanone	*0.19*
1,1,2,2-Tetrachloroethane	*0.00037*
Tetrachloroethylene	*0.057*

1,2,4-Trichlorobenzene	*0.03*
1,1,2-Trichloroethane	*0.0012*
Trichloroethylene	*0.0033*
Vinyl Chloride	*0.0011*

SOPUS Response:

The comment is acknowledged. Method Detection Limits (MDLs - the results of a statistical calculation) have not been provided; however, reporting limits (RLs – the limit of detection of a specific target analyte for a specific sample after adjustments are made for dilutions or percent moisture) are provided by the laboratory and were included in the original Tier 3 submittals. Therefore, AECOM is interpreting that "reporting limit" was meant in place of "method detection limit."

During a technical discussion with IEPA on July 15, 2021, it was communicated by IEPA that soil vapor samples from appropriate depths with respect to residence foundations need to be considered and evaluated. Based on this information, a review of the foundation information for residences with respect to VMP locations was performed. This evaluation was used to determine the appropriate depths for soil vapor samples from each vapor monitoring point. Refer to **Table 2** for the evaluation of VMP locations compared to nearby residence foundation type. **Figure 2** shows the locations of residences and VMPs.

The closest residences to VMP-1, VMP-7, VMP-8, VMP-9, VMP-23, VMP-32, VMP-47, VMP-63, and VMP-64 have foundations that consist of concrete basements. Based on this evaluation, the appropriate port to consider at these locations is the 8.5-ft bgs port (at VMP-1), the 9.5-ft bgs port (at VMP-8), the 10-ft bgs port (at VMP-23, VMP-32, VMP-47), the 11.5-ft bgs port (at VMP-9), and the 13.5-ft bgs port (at VMP-7). These depths at the identified locations do not exhibit any exceedances of the recalculated RO for bromodichloromethane (0.06 mg/m^3); do exhibit limited sporadic exceedances of the recalculated RO for chloroform (0.05 mg/m^3); and do not exhibit exceedances of the recalculated RO for ethylbenzene (0.61 mg/m^3). None of these VMP locations are located near the groundwater exceedances of the groundwater remediation objective for the indoor inhalation exposure route discussed in the response to Comment 1 above.

The closest residences to VMP-4, and VMP-24, have foundations that consist of concrete basements and soil crawl spaces. Based on this evaluation, the appropriate ports to consider at these locations are the 5-ft and 12-ft bgs ports at VMP-4, and the 5-ft and 10-ft bgs ports at VMP-24. The 12-ft bgs port at VMP-4 and the 10-ft bgs port at VMP-24 do not exhibit any exceedances of the recalculated RO for ethylbenzene (0.61 mg/m3). Neither of these VMP locations are located near the groundwater exceedances of the groundwater remediation objective for the indoor inhalation exposure route.

Naphthalene has not been nor is it currently included as an analyte of the TO-15 analysis performed for the soil vapor monitoring program.

The closest residences to VMP-6 have foundations that consist of concrete slab-on-grade. Based on this evaluation, the appropriate port to consider at this location is the 5-ft bgs port.

Based on the evaluation of VMP locations compared to surrounding residence foundations, the only locations where the 5-ft bgs port is an appropriate sample location are listed below:

VMP-1	VMP-11	VMP-48
VMP-4	VMP-17	VMP-49
VMP-5	VMP-20	VMP-50
VMP-6	VMP-24	VMP-52
VMP-7	VMP-32	VMP-62

Based on the information provided above, it is requested that the 5-ft bgs samples at only the locations above be considered and that the 5-ft bgs samples at all other locations be removed from consideration for establishment of the proposed Tier 3 ROs.

A proposal to modify the quarterly soil vapor monitoring program in accordance with the evaluation of VMP locations compared to surrounding residence foundations was discussed with IEPA during a technical presentation on October 14, 2021. The purpose of this modification proposal will be to focus monitoring and data collection efforts at more relevant VMP depths based on location throughout the Village of Roxana. Based on IEPA comments during the October 14, 2021 technical discussion, this proposal will be made after evaluation of the effectiveness of the SEE system at the PWY.

IEPA Comment 10:

Using the correct values noted in Items 2-7 above, the following chemicals exceed the residential indoor inhalation exposure route for soil gas samples collected from depths between 8.5 and 20 feet bgs:

- *Chloroform exceeds the residential indoor inhalation remediation objective of 0.048 mg/m^3 at 10 feet bgs for the following sample point:*

Location	***Concentration (mg/m^3)***
VMP-50	*0.066*

SOPUS Response:

The comment is acknowledged. VMP-50 is located in the alley between East 4th and East 5th Streets to the west of Chaffer Avenue and consists of four ports located at 5-ft, 10-ft, 20-ft and 30-ft below ground surface (bgs). The residences immediately surrounding VMP-50 have foundations consisting of concrete basements and soil crawl spaces. Groundwater in the vicinity of VMP-50 has been approximately 36 to 45 feet bgs from 2013 to present. The recalculated RO for chloroform (based on IEPA comments 2-7 above) is 0.05 mg/m^3. Considering the foundation construction of the surrounding residences, the appropriate depth of analytical data to consider at VMP-50 is that from the 5-ft and 10-ft bgs ports. Evaluation of the chloroform analytical data (1Q15 through 1Q21) from the 5-ft port shows no exceedances of the recalculated RO (the RL for chloroform exceeded the recalculated RO in the 4/10/2018 sample because a nearby Ameren Illinois natural gas utility line leak caused elevated reporting limits for the sample). Evaluation of the chloroform analytical data (1Q15 through 1Q21) from the 10-ft port at VMP-50 shows sporadic exceedances of the recalculated

RO in 3Q16, 4Q16, 3Q18 and 1Q21 with concentrations ranging between 0.055 and 0.099 mg/m^3. Refer to **Table 3** for the evaluation of chloroform analytical results vs the recalculated ROs.

Considering the foundation construction of the surrounding residences, the 20-ft and 30-ft bgs ports at VMP-50 are not appropriate depths for evaluation of analytical data with respect to indoor air. Chloroform is the only constituent at VMP-50 (10-ft port) which exhibited exceedances when screened against the recalculated ROs. VMP-50 is not located near any groundwater exceedances of the groundwater remediation objective for the indoor inhalation exposure route.

Chloroform is not a COPC for this site. Potential sources of chloroform in soil gas and groundwater include discharge of chlorinated water such as lawn irrigation, leakage/drainage from a swimming pool, or leaking municipal water lines. Other sources include pulp and papermills, sanitary landfills and hazardous waste sites. Chloroform was used in the past as an extraction solvent for fats, oils, greases and other products; as dry-cleaning spot remover; in fire extinguishers; as a fumigant; and as an anesthetic. However, chloroform is no longer used in the products. Chloroform may also be found in some foods and beverages, largely from the use of tap water during production processes.[4]

Given the information provided above, it is requested that chloroform be removed from consideration for soil vapor at the Roxana project site.

IEPA Comment 11:

Using the correct values noted in Items 2-7 above, the following chemicals either exceed or present method detection limits that exceed the residential indoor inhalation exposure route for the most recent soil gas analyses at sample location VMP-56 at 38.5 feet bgs:

Chemical	***Concentration (mg/m^3)***	***Remediation Objective (mg/m^3)***
Benzene	*470*	*1.5*
Bromodichloromethane	*<57 (MDL)*	*0.51*
Bromoform	*<87 (MDL)*	*64*
Bromomethane	*<33 (MDL)*	*23*
1,3-Butadiene	*<19 (MDL)*	*0.35*
Carbon Tetrachloride	*<53 (MDL)*	*2.3*
Chloroform	*<41 (MDL)*	*0.44*
alpha-Chlorotoluene	*<41 (MDL)*	*0.34*
1,2-Dibromoethane	*<65 (MDL)*	*0.04*
1,4-Dichlorobenzene	*<51 (MDL)*	*1.4*
1,2-Dichloroethane	*<34 (MDL)*	*3.9*
1,2-Dichloropropane	*<39 (MDL)*	*3.7*
1,2-Dichloropropylene (cis+trans)	*<38 (MDL)*	*4.2*
1,4-Dioxane	*<120 (MDL)*	*0.88*
Ethylbenzene	*250*	*5.7*
Hexachlorobutadiene	*<300 (MDL)*	*1.8*
2-Hexanone	*8,400*	*4,400*

[4] Chloroform – USEPA (epa.gov/sites/default/files/2016-09/documents/chloroform.pdf

1,1,2,2-Tetrachloroethane	*<58 (MDL)*	*3*
1,2,4-Trichlorobenzene	*<250 (MDL)*	*30*
1,1,2-Trichloroethane	*<46 (MDL)*	*1.2*
Trichloroethylene	*<45 (MDL)*	*3.3*
Vinyl Chloride	*<22 (MDL)*	*1.1*

SOPUS Response:

The comment is acknowledged. Method Detection Limits (MDLs - the results of a statistical calculation) have not been provided; however, reporting limits (RLs – the limit of detection of a specific target analyte for a specific sample after adjustments are made for dilutions or percent moisture) are provided by the laboratory and were included in the original Tier 3 submittals. Therefore, AECOM is interpreting that "reporting limit" was meant in place of "method detection limit."

VMP-56 is located on East 4th Street to the east of Chaffer Avenue and consists of three ports located at 10-ft, 25-ft and 38.5-ft bgs. The properties immediately surrounding VMP-56 are vacant lots currently owned by SOPUS. The closest residence to this location has a foundation consisting of a concrete basement and a soil crawl space; however, VMP-32 is closer to this residence than VMP-56. Groundwater in the vicinity of VMP-56 has been approximately 35 to 43 feet bgs from 2013 to present; therefore, the 38.5-ft bgs port at VMP-56 is often submerged and unable to be sampled. Considering the foundation construction of the surrounding residences, the appropriate depth of analytical data to consider at VMP-56 is that from the 10-ft bgs port. Evaluation of the analytical data (1Q15 through 1Q21) from the 10-ft port and 25-ft port at VMP-56 exhibits no analytical results in exceedance of the recalculated ROs. Refer to **Table 4** for the evaluation of analytical results vs the recalculated ROs at VMP-56.

Considering the proximity of this this location to any residence and the foundation construction of the closest residence, the 25-ft and 38.5-ft bgs ports at VMP-56 are not appropriate depths for evaluation of analytical data. There are no exceedances for the constituents listed in IEPA Comment 11 at VMP-56 in the 10-ft port when screened against the recalculated ROs. VMP-56 is also not located near any groundwater exceedances of the groundwater remediation objective for the indoor inhalation exposure route.

Given the information provided above, it is requested that VMP-56 be removed from consideration for establishment of the proposed Tier 3 ROs.

IEPA Comment 12:

Using the correct values noted in Items 1-6 above, the following chemicals either exceed or present method detection limits that exceed the residential indoor inhalation exposure route for the most recent soil gas analyses at sample location VMP-2 at 42 feet bgs:

Chemical	***Concentration (mg/m^3)***	***Remediation Objective (mg/m^3)***
Benzene	*51 (estimated)*	*1.7*

Bromodichloromethane	*<540 (MDL)*	*0.57*
Bromoform	*<840 (MDL)*	*71*
Bromomethane	*<3,100 (MDL)*	*25*
1,3-Butadiene	*<180 (MDL)*	*0.39*
Carbon Tetrachloride	*<510 (MDL)*	*2.5*
Chlorobenzene	*<370 (MDL)*	*350*
Chloroform	*<400 (MDL)*	*0.49*
Chloromethane	*<1,700 (MDL)*	*380*
alpha-Chlorotoluene	*<420 (MDL)*	*0.38*
1,2-Dibromoethane	*<620 (MDL)*	*0.045*
1,4-Dichlorobenzene	*<490 (MDL)*	*1.6*
1,2-Dichloroethane	*<330 (MDL)*	*4.3*
1,2-Dichloropropane	*<370 (MDL)*	*4.1*
1,2-Dichloropropylene (cis+trans)	*<370 (MDL)*	*4.7*
1,4-Dioxane	*<1,200 (MDL)*	*0.98*
Ethylbenzene	*<350 (MDL)*	*6.3*
Hexachlorobutadiene	*<3,400 (MDL)*	*2.0*
2-Hexanone	*<1,300*	*210*
1,1,2,2-Tetrachloroethane	*<560 (MDL)*	*0.41*
Tetrachloroethylene	*<550 (MDL)*	*63*
1,2,4-Trichlorobenzene	*<2,400 (MDL)*	*34*
1,1,2-Trichloroethane	*<440 (MDL)*	*1.3*
Trichloroethylene	*<440 (MDL)*	*3.6*
Vinyl Chloride	*<210 (MDL)*	*1.3*

SOPUS Response:

The comment is acknowledged. Method Detection Limits (MDLs - the results of a statistical calculation) have not been provided; however, reporting limits (RLs – the limit of detection of a specific target analyte for a specific sample after adjustments are made for dilutions or percent moisture) are provided by the laboratory and were included in the original Tier 3 submittals. Therefore, AECOM is interpreting that "reporting limit" was meant in place of "method detection limit."

VMP-2 is located in the alley between East 3rd and East 2nd Streets at Chaffer Avenue and consists of four ports located at 5-ft, 8.5-ft, 22-ft and 42-ft bgs. The properties immediately surrounding VMP-2 have foundations consisting of primarily of concrete basements; one nearby residence has a concrete basement and soil crawl space. Groundwater in the vicinity of VMP-2 has been approximately 34 to 42 feet bgs from 2011 to present; therefore, the 42-ft bgs port at VMP-2 is often submerged and unable to be sampled. Considering the foundation construction of the surrounding residences, the appropriate depth of analytical data to consider at VMP-2 is that from the 5-ft and 8.5-ft bgs ports. Evaluation of the analytical data (1Q15 through 1Q21) from the 5-ft port and 8.5-ft ports at VMP-2 exhibits no analytical results in exceedance of the recalculated ROs with one exception (an exceedance of ethylbenzene was observed in the 5-ft bgs port in 1Q15 [0.79 mg/m^3 detected vs 0.61 mg/m^3 recalculated RO]). Refer to **Table 5** for the evaluation of analytical

results vs the recalculated ROs at VMP-2. VMP-2 is also not located near any groundwater exceedances of the groundwater remediation objective for the indoor inhalation exposure route.

Most of the chemicals listed in IEPA Comment 12 are not COPCs for this Site based on the modeling information provided in the original Tier 3 Demonstration submittal. Benzene and ethylbenzene are the chemicals listed in IEPA Comment 12 that are also included in the COPCs for this site (refer to discussion in response to IEPA Comment 8 for more information on the COPCs for this Site).

Given the information provided above, it is requested that VMP-2 be removed from consideration for establishment of the proposed Tier 3 ROs.

IEPA Comment 13:

In addition to the above noted method detection limit exceedances for 1,2-Dibromoethane, analyses results for the chemical demonstrates method detection limit exceedances of the applicable residential soil gas indoor inhalation remediation objectives. Due to the number of locations where the method detection limits exceed the applicable remediation objectives, the below table provides the indoor inhalation remediation objective that the method detection limit must meet at the specified soil gas
sample depths:

Soil Gas Sample Depth (feet bgs)	***1,2-Dibromoethane Soil Gas R.O. (mg/m^3)***
8.5	*0.0025*
9.5	*0.0037*
10	*0.0043*
11.5	*0.0062*
12	*0.0069*
12.5	*0.0075*
13.5	*0.0088*
23.5	*0.021*

SOPUS Response:

The comment is acknowledged. Method Detection Limits (MDLs - the results of a statistical calculation) have not been provided; however, reporting limits (RLs – the limit of detection of a specific target analyte for a specific sample after adjustments are made for dilutions or percent moisture) are provided by the laboratory and were included in the original Tier 3 submittals. Therefore, AECOM is interpreting that "reporting limit" was meant in place of "method detection limit."

1,2-Dibromoethane has been estimated below the reporting limit (RL) 36 times and detected above the RL one time out of 6,983 total samples collected since the beginning of soil vapor sampling in Roxana in 2009 (0.13 mg/m^3 in August 2016 at VMP-50-30). RLs primarily ranged from 0.0077 to 0.012 mg/m^3 since 2009, with a few exceptions. The recalculated RO (based on IEPA comments 2-7 above) for 1,2-dibromoethane is 0.004 mg/m3.

Groundwater throughout the Village of Roxana has had sporadic detections of 1,2-dibromoethane during 1Q15 through 1Q21 with no exceedances (the Class 1 groundwater screening criteria is 0.00005 mg/L; the RLs range from 0.000019 mg/L to 0.000022 mg/L).

1,2-Dibromoethane has historically been used in pesticides. This compound volatilizes very easily. We have discussed the potential to achieve lower reporting limits for 1,2-dibromoethane with Eurofins (analytical laboratory used to analyze soil vapor samples).

Based on modeling information in conjunction with reviews of the historic analytical data presented in the original Tier 3 Demonstration submittal, a list of COPCs for the Roxana Site was developed (refer to the SOPUS Response to IEPA Comment 8 above). 1,2-Dibromoethane is not a COPC for this site.

Given the information provided above, it is requested that 1,2-dibromoethane be removed from consideration for soil vapor at the Roxana project site.

IEPA Comment 14:

The facility proposes to exclude the construction worker population indoor inhalation exposure route using a "trench" scenario, in place of a building. The Illinois EPA wishes to clarify construction worker populations are not subject to the exclusion of the indoor inhalation route. In addition, 35 Ill. Adm. Code 742.200 defines a "building" as a man-made structure with an enclosing roof and enclosing walls (except for windows and doors) that is fit for any human occupancy for at least six consecutive months. The proposed trench in the scenario does not meet the definition of a building pursuant to Section 742.200.

SOPUS Response:

The comment is acknowledged. For the construction worker scenario, the ingestion and dermal contact exposure pathways are managed through controls such as safe work plans. Construction worker is not anticipated as a potential receptor for the indoor inhalation exposure pathway, as the Village of Roxana is an established neighborhood with homes and other infrastructure already in place. As such, construction worker Tier 3 ROs have not been recalculated and are no longer proposed.

IEPA Comment 15:

RCRA corrective action activities carried out at the Equilon facility including off-site activities as necessary must meet the requirements of: (1) 35 Ill. Admin. Code 724.201; (2) the facility's RCRA permit; and (3) Illinois EPA letters regarding such activities.

SOPUS Response:

The comment is acknowledged.

NOTES:

1) Chemicals listed are those that are included on Table H and also in the project groundwater analyte list.

Indicates a historical exceedance of screening criteria.

Indicates a current exceedance of screening criteria.

LABORATORY QUALIFIERS

B = Target analyte was identified in the method blank, indicating possible lab contamination.
J = The analyte was detected below the reporting limit. Result is estimated.
H = Analyzed or extracted out of holding time criteria.
F1 = Indicates MS and/or MSD recovery is outside acceptance limit.
*+ = Indicates LCS and/or LCSD is outside acceptance limit, high biased
*1 = LCS/LCSD RPD is outside contol limit
<#.## Indicates the analyte was not detected above the given reporting limit.

AECOM QUALIFIERS

J = The result is estimated.
UJ = Estimated non-detect.
U = Result is non-detect.

NOTES:

1) The "Primary depth" is the port that is within 3-5 ft below the bottom of lowest part of the foundation or the closest to that interval if there are no ports within 3-5 ft of foundation bottom.

2) The "Secondary depth" is the port that is within 3-5 ft below the bottom of crawlspace if the house has both basement & crawlspace, or the closest to that interval if there are no ports within 3-5 ft of crawlspace bottom.

Notes:

Yellow highlighted cells indicate detected results that exceed RO.

The RL for chloroform exceeded the RO in the 4/10/2018 sample because a nearby natural gas utility line leak caused elevated reporting limits for the sample.

Lab Qualifiers

J = Estimated value; results between the MDL and RL

U = Compound analyzed for but not detected above the RL

SEE LAST PAGE OF TABLE FOR NOTES

Notes:
Yellow highlighted cells indicate readings that exceed residential screening criterion.
Blank cells in Result column indicate that analyte was not on target analyte list.

Lab Qualifiers
J = Estimated value; results between the MDL and RL
U = Compound analyzed for but not detected above the RL
CN = Indicates potential high bias due to use of Tedlar© bag for off-line dilution
ND,UJ = Non-detected compound associated with low bias in the continuing calibration verification (CCV)
J0 = Estimated value due to bias in the CCV

AECOM Qualifiers
J = Estimated detection
UJ = Estimated non-detect
U = Non-detect due to blank contamination

SEE LAST PAGE OF TABLE FOR NOTES

Notes:
Yellow highlighted cells indicate readings that exceed residential screening criterion.
Blank cells in Result column indicate that analyte was not on target analyte list.

Lab Qualifiers
J = Estimated value; results between the MDL and RL
U = Compound analyzed for but not detected above the RL
CN = Indicates potential high bias due to use of Tedlar© bag for off-line dilution
ND,UJ = Non-detected compound associated with low bias in the continuing calibration verification (CCV)
J0 = Estimated value due to bias in the CCV

AECOM Qualifiers
J = Estimated detection
UJ = Estimated non-detect
U = Non-detect due to blank contamination

REVISED APPENDIX 2-B TABLE 1 FROM ORIGINAL TIER 3 DEMONSTRATION SUBMITTAL

APPENDIX 2-B, TABLE 1 (rev. 1)
LITTLE, DAISEY, NAZAROFF MODEL INPUT PARAMETERS AND CALCULATIONS (RESIDENTIAL)

NOTES:
Little, Daisey, Nazaroff Model
Chemical Properties Sources :
USEPA RSL Chemical Specific Parameters in *Blue*, all others provided in TACO, Appendix C, Table E

	Symbol	Definition	Units	CAS: / Chemical:	67-64-1 Acetone	71-43-2 Benzene	100-44-7 Benzyl Chloride	75-27-4 Bromo-dichloro-methane	75-25-2 Bromoform	74-83-9 Bromomethane	106-99-0 Butadiene, 1,3-	78-93-3 2-Butanone	75-15-0 Carbon Disulfide	56-23-5 Carbon Tetrachloride	108-90-7 Chlorobenzene	67-66-3 Chloroform	74-87-3 Chloro-methane	110-82-7 Cyclo-hexane	106-93-4 Dibromo-ethane, 1,2-	95-50-1 Dichloro-benzene, 1,2-	106-46-7 Dichloro-benzene, 1,4-	75-71-8 Dichloro-difluoro-methane	75-34-3 Dichloro-ethane, 1,1-	75-35-4 Dichloro-ethylene, 1,1-	75-09-2 Dichloro-methane
