Notes:
1) NM = Not Measured, PID - Photo Ionization Detector; THC = Total Hydrocarbon Concentration; PHC = Petroleum Hydrocarbon Concentration;
OVR = Over-range; ppmv = Parts Per Million By Volume.

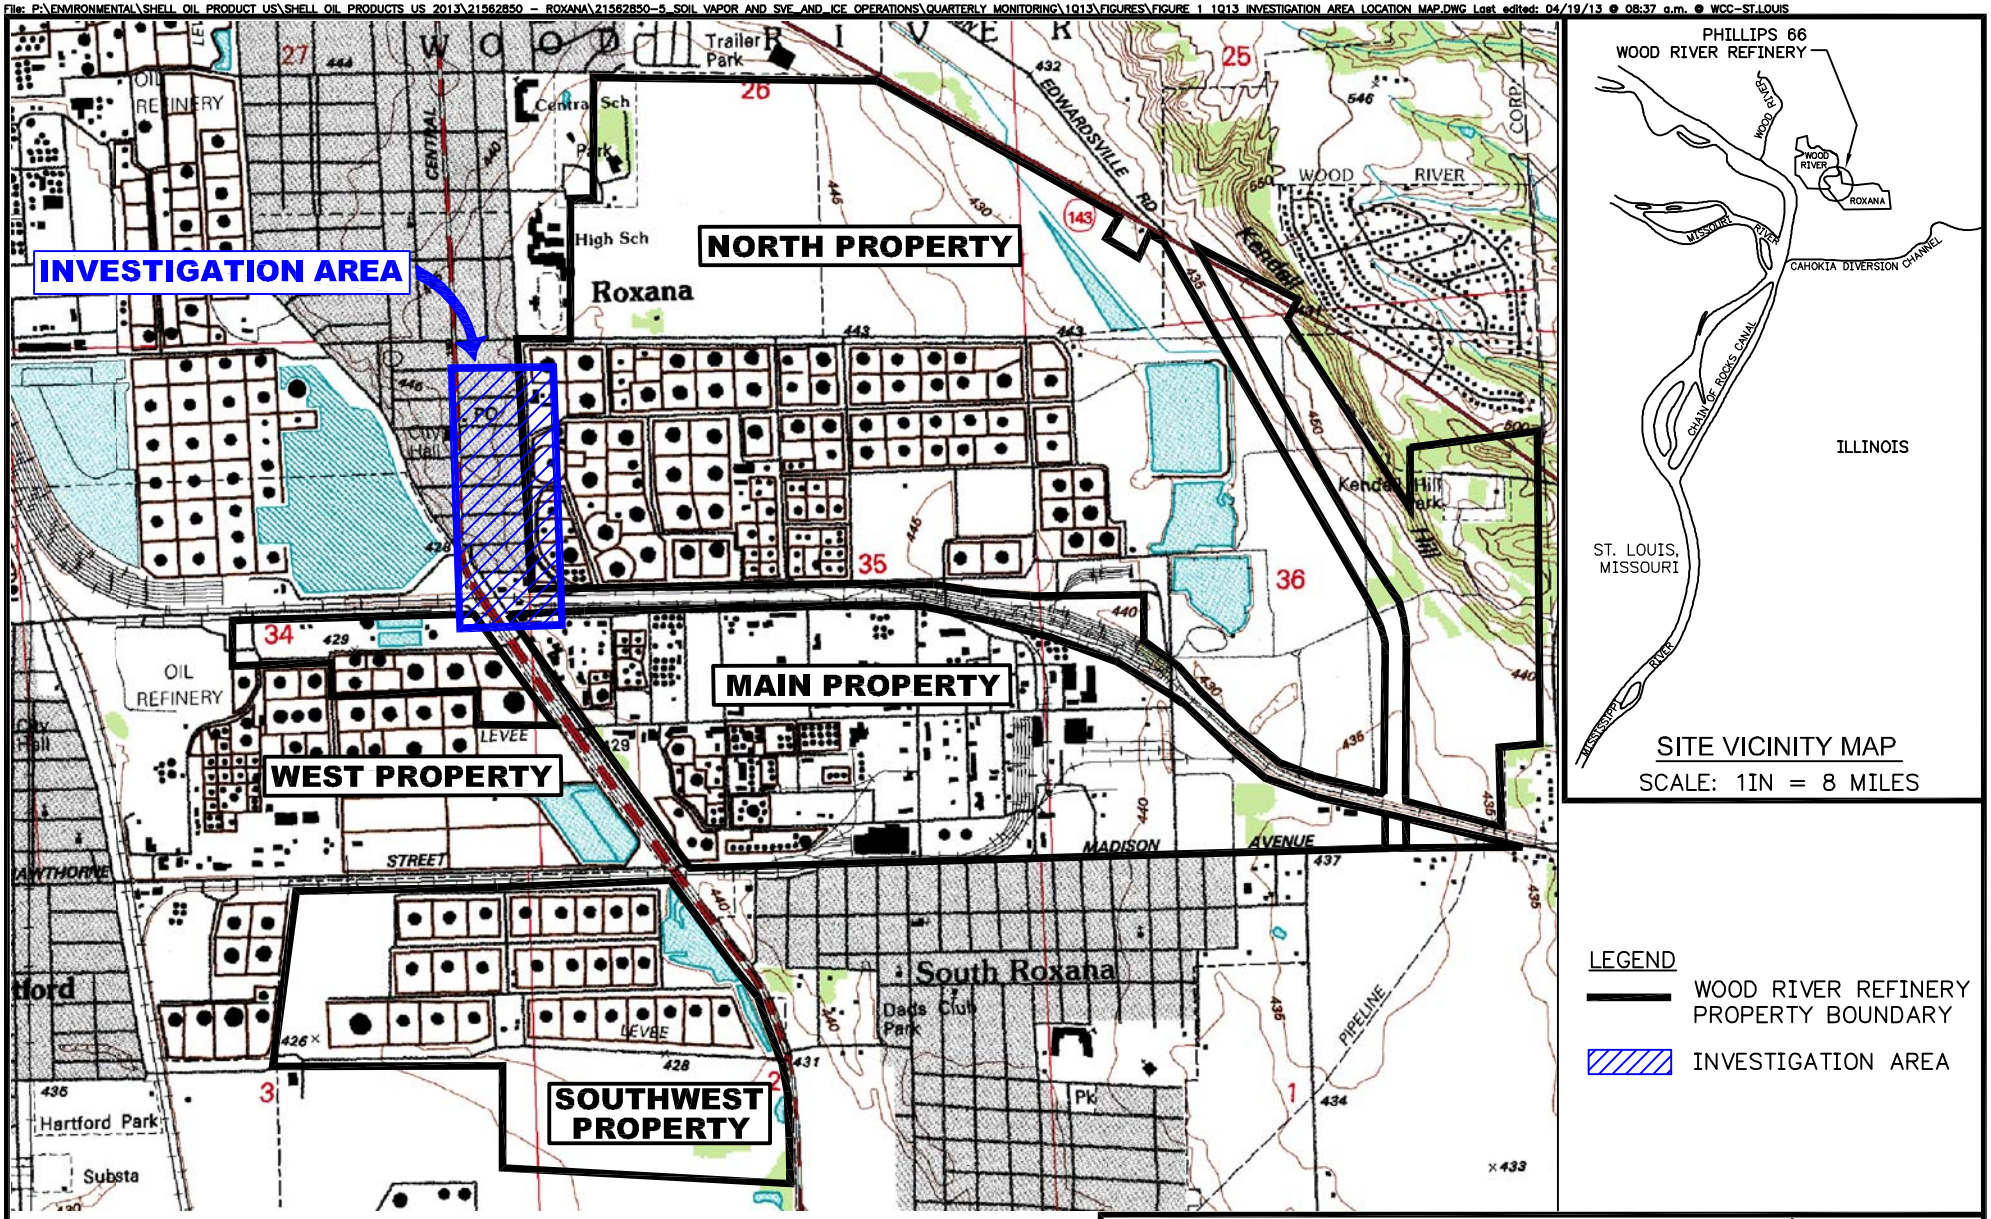
Notes
**Lab Qualifiers**
J = Estimated value; results between the MDL and RL
U = Compound analyzed for but not detected above the RL
**URS Qualifiers**
J = Estimated detection
UJ = Estimated non-detect
U = Non-detect due to blank contamination

The following EVS descriptions and assumptions apply to **Figures 9** through **12**:

**Plan View Model Output** – The data input for the plan view model was not limited by depth and was modeled in three dimensions (3D). The bottom surface of the resulting model was limited to the potentiometric groundwater surface elevation. The two dimensional (2D) appearance of the figures created from the 3D model was achieved by displaying an aerial view of horizontal slices through the model. The horizontal slices were taken parallel to the ground surface that was created from GPS survey data, rather than at single elevation plane. The result of this is a surface that accurately represents soil vapor concentrations at discreet depths measured from ground surface.



**Inward Kriging / Boundary Cut-off** – This method of Kriging limits the horizontal extent of data modeling to the extent of the data on the x/y plane in a convex hull. The model is bounded by the VMPs.

**Vertical Cut-off** – The bottom surface of this model is based on the 3Q12 groundwater gauging data collected in Roxana. The groundwater gauging data was used to model a 2D surface that represents the interface between the top surface of groundwater and the bottom surface of soil vapor.

**Duplicate Samples –** Analytical concentrations from duplicate samples collected at the same location and depth were averaged.

**Detection Limits –** In cases where the lab reported a non-detect, half the value of the lab detection limit was used in the model. This conservative method is based on the assumption that the soil is likely not free of benzene but the quantity contained is lower than detectable at the analyzed dilution. Data are posted where non-detect.

LEGEND

- VAPOR MONITORING POINT LOCATIONS
- VAPOR MONITORING POINT LOCATION (NOT USED FOR QUARTERLY SAMPLING)

NOTES:
1. VMP–29, VMP–30, AND VMP–41 WERE ADDED TO QUARTERLY ROXANA SOIL VAPOR MONITORING PROGRAM IN 3Q12.
2. VMP 47 THROUGH VMP–55 WERE ADDED TO THE QUARTERLY ROXANA SOIL VAPOR MONITORING PROGRAM IN 1Q13.

NOTES:

1) CONTOUR LINES PRIMARILY GENERATED BY SURFER VERSION 8 MODELING OF GROUNDWATER ELEVATIONS. SOME INTERPRETATION WAS DONE UTILIZING PROFESSIONAL JUDGMENT AND CONTOUR LINES WERE MODIFIED BY HAND.

2) ELEVATIONS ARE RELATIVE TO 1988 USGS DATUM.

3) COMPREHENSIVE GROUNDWATER ELEVATIONS WERE MEASURED JANUARY 2–4 AND 7–8 2013. ADDITIONAL GAUGING ACTIVITIES WERE CONDUCTED ON JANUARY 23, 2013 AND FEBRUARY 11, 2013 FOR NEWLY INSTALLED GROUNDWATER MONITORING WELLS IN THE VILLAGE OF ROXANA.

4) GROUNDWATER MONITORING WELLS MW–16, MW–17, MW–18, MW–19, MW–20, MW–21, AND MW–22 WERE INSTALLED DURING 4Q12.

NOTES:

1. Not Sampled[1] = VMP SCREEN SUBMERGED BELOW WATER TABLE. NO SAMPLE COLLECTED.
2. Resample[2] = VMP RESAMPLED DUE TO ISSUES WITH CANISTER AT THE LABORATORY.
3. Not Sampled[3] = FAILED HELIUM LEAK TEST.
4. DATA NOT REPRESENTATIVE BASED ON INTEGRITY ASSESSMENT[4].
5. GRAB SAMPLE TAKEN[5].
6. J = RESULT IS ESTIMATED
   < = NOT DETECTED AT INDICATED REPORTING LIMIT.
7. MULTIPLE RESULTS (e.g., 44Ø/41Ø) INDICATE DUPLICATE SAMPLES.
8. VMP–47 THROUGH VMP–55 WERE ADDED TO THE QUARTERLY ROXANA SOIL VAPOR MONITORING PROGRAM IN 1Q13.

1Q13 Summary of Benzene Soil Vapor Analytical Results – WRR

FIG. NO. 7

File: P:\ENVIRONMENTAL\SHELL OIL PRODUCT US\SHELL OIL PRODUCTS US 2013\21562850 - ROXANA\21562850-5_SOIL VAPOR AND SVE_AND_ICE OPERATIONS\QUARTERLY MONITORING\1Q13\FIGURES\FIGURE 7 SUMMARY OF BENZENE SOIL VAPOR ANALYTICAL RESULTS (WRR).DWG Last edited: APR. 19, 13 @ 08:44 a.m. by: david_deguire

PLAN VIEW (DEPICTING OFFSETS)

NOTES:
1. SOIL VAPOR BENZENE CONCENTRATIONS FROM THE 3Q12 SAMPLING EVENT ARE DEPICTED IN GREEN. VALUES DEPICTED IN ORANGE EXCEED BENZENE SCREENING CRITERION (0.37 mg/m³ FOR VMP 1–9, 31, 32 AND 42–45 [RESIDENTIAL] AND 2.8 mg/m³ FOR VMP–11 [COMMERCIAL/INDUSTRIAL]).
2. GROUNDWATER ELEVATIONS SHOWN ON THIS CROSS–SECTION ARE BASED ON GROUNDWATER GAUGING DATA COLLECTED ON JANUARY 2–4 AND 7–8, 2013. ADDITIONAL GAUGING ACTIVITIES WERE CONDUCTED ON JANUARY 23 2013 FOR NEWLY INSTALLED GROUNDWATER MONITORING WELLS IN THE VILLAGE OF ROXANA.
3. THIS CROSS–SECTION IS PRIMARILY BASED ON THE INTERPRETATION OF CPT DATA COLLECTED BY URS DURING THE 2006 AND 2009 INVESTIGATION ACTIVITIES. BORING LOGS DEVELOPED DURING OTHER DRILLING TECHNIQUES (E.G. AUGER AND GEOPROBE) WERE USED TO SUPPLEMENT CPT DATA.
4. THE DEPTH AND THE THICKNESS OF INDIVIDUAL STRATA WERE OBSERVED IN CPT LOGS GENERATED AT NEARBY LOCATIONS. THEREFORE, WELL SCREENS MAY APPEAR TO BE PARTIALLY WITHIN CLAY LAYERS OR SHALLOW/DEEPER WITHIN A PERMEABLE STRATUM THAN ACTUAL CONDITIONS DUE TO MAP PROJECTIONS.
5. CROSS–SECTION TRACE LINE SHOWS DISTANCE AND DIRECTION EACH POINT WAS PROJECTED TO CONSTRUCT THIS CROSS–SECTION.

LEGEND

- STRATUM BOUNDARY ASSUMED
- FILL (INCLUDES CINDERS, GRAVEL, CLAY, AND/OR SILTY CLAY.)
- CLAY PROJECTED BETWEEN POINTS (INCLUDES SILTY CLAY AND SANDY CLAY)
- SAND PROJECTED BETWEEN POINTS (INCLUDES SILTY SAND AND CLAYEY SAND)
- VAPOR PORT SCREENS
- GROUNDWATER WELL SCREEN
- GROUNDWATER WATER LEVEL
- POTENTIOMETRIC SURFACE – ESTIMATED

- 50.0 GROUNDWATER CONCENTRATION BENZENE (mg/L)

LNAPL THICKNESS WAS MEASURED DURING THE COMPREHENSIVE GROUNDWATER MONITORING GAUGING EVENT ON JANUARY 2–4 AND 7–8, 2013. LNAPL THICKNESS WAS ALSO MEASURED DURING ADDITIONAL GAUGING ACTIVITIES CONDUCTED ON JANUARY 23, 2013 AND FEBRUARY 11, 2013 FOR NEWLY INSTALLED GROUNDWATER MONITORING WELLS IN THE VILLAGE OF ROXANA. REFER TO TABLE 1 FOR GROUNDWATER GAUGING INFORMATION.

NOTES:

1. IMAGES GENERATED UTILIZING CTECH ENVIRONMENTAL VISUALIZATION SYSTEM MODELING SOFTWARE. CONCENTRATIONS BETWEEN KNOWN DATA POINTS (E.G. GROUNDWATER MONITORING WELLS) ARE INTERPOLATIONS AND EXTRAPOLATIONS OF THE MEASURED DATA. SOME INTERPRETATION WAS COMPLETED UTILIZING PROFESSIONAL JUDGEMENT AND CONTOUR LINES WERE MODIFIED BY HAND.
2. ALL RESULTS SHOWN IN mg/L.
3. ANALYTICAL REPORTING LIMITS ARE SHOWN FOR SAMPLES WITH NON-DETECT RESULTS (e.g., <Ø.ØØØ5 mg/L).
4. J = THE TARGET ANALYTE WAS DETECTED BELOW THE REPORTING LIMIT AND THE RESULT IS ESTIMATED.
   U = RESULTS IS NON-DETECT.
5. NON-DETECT VALUES ARE MODELED AT HALF THE REPORTING LIMIT.
6. MULTIPLE RESULTS (e.g. 123Ø/132Ø) INDICATE DUPLICATE SAMPLES.
7. GROUNDWATER MONITORING WELLS MW-16 AND MW-22 WERE ADDED TO THE GROUNDWATER MONITORING PROGRAM IN 1Q13.
8. PIEZOMETER ROST-3-PZ WAS REPLACED BY GROUNDWATER MONITORING WELL ROST-3-MW DURING 4Q12.
9. GROUNDWATER MONITORING WELL P-55 WAS REPLACED DURING 4Q12.

# Roxana Soil Vapor Quarterly – 1st Quarter 2013 Data Review

**Laboratory SDG: 1301353AR1, BR1**

**Data Reviewer: Elizabeth Kunkel**

**Peer Reviewer: Steve Gragert**

**Date Reviewed: 2/18/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| VMP-47-5-012113 | VMP-47-10-012113 |
| VMP-1-5-012113 | VMP-1-38.5-012113 |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes, however, professional judgment was used to qualify sample VMP-1-38.5-012113 due to a helium result in the sample (6.6%) that was greater than 10% of helium in the shroud (57.8%).

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated sample VMP-1-38.5-012113 was diluted and re-analyzed to bring the highest level target analytes within the calibration range of the instrument. Results for the highest level target analytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analyses. Samples VMP-1-5-012113 and VMP-1-38.5-012113 were diluted due to high levels of target analytes. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. TO-15 LCS/LCSD recoveries were outside evaluation criteria. These issues are addressed further in the appropriate sections below. The laboratory report was re-issued to report additional natural gas analytes via ASTM D-1945 and also the top five tentatively identified compounds (TICs) via TO-15.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1301353A-05A | TO-15 | Bromomethane | 0.46 ppbv / 1.8 µg/m$^3$ |
| 1301353A-05A | TO-15 | 1,4-Dichlorobenzene | 0.059 ppbv / 0.36 µg/m$^3$ |

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1301353B-05A | Natural Gases | Nitrogen | 0.087% |

Qualifications due to blank contamination are included in the following table. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| VMP-47-5-012113 | TO-15 | Bromomethane | - | **U** |
| VMP-47-10-012113 | TO-15 | Bromomethane | - | **U** |
| VMP-47-10-012113 | TO-15 | 1,4-Dichlorobenzene | - | **U** |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1301353A-07A/AA | TO-15 | Carbon disulfide | **137**/**131** | 5 | 70-130/25 |
| 1301353A-07A/AA | TO-15 | 3-Chloropropene | **139**/**131** | 6 | 70-130/25 |
| 1301353A-07A/AA | TO-15 | trans-1,2-Dichloroethene | **135**/130 | 4 | 70-130/25 |

Analytical data that required qualification based on LCS data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was used to qualify sample VMP-1-38.5-012113 due to a helium result in the sample (6.6%) that was greater than 10% of helium in the shroud (57.8%).

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-1-38.5-012113 | TO-15 | All detects | **J** |
| VMP-1-38.5-012113 | TO-15 | All non-detects | **UJ** |
| VMP-1-38.5-012113 | Natural gases | All detects | **J** |
| VMP-1-38.5-012113 | Natural gases | All non-detects | **UJ** |

Project Name: Roxana Soil Vapor
Project #:
Workorder #: 1301353AR1

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/22/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1301353AR1**

Four 1 Liter Summa Canister samples were received on January 22, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

Dilution was performed on samples VMP-1-5-012113 and VMP-1-38.5-012113 due to the presence of high level target species.

Due to high-level target compounds, sample VMP-1-38.5-012113 was analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit.

THE WORKORDER WAS REISSUED ON FEBRUARY 15, 2013 TO REPORT THE TOP 5 TENTATIVELY IDENTIFIED COMPOUNDS PER CLIENT'S REQUEST.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Workorder #: 1301353BR1

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/22/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1945 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1301353BR1**

Four 1 Liter Summa Canister samples were received on January 22, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

THE WORKORDER WAS REISSUED ON 02/12/13 TO REPORT ADDITIONAL COMPOUNDS FOR VMP-47-5-012113, VMP-47-10-012113, VMP-1-5-012113 and VMP-1-38.5-012113 PER CLIENT REQUEST.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

# Roxana Soil Vapor Quarterly – 1st Quarter 2013 Data Review

**Laboratory SDG: 1301354AR1,BR1**

**Data Reviewer: Elizabeth Kunkel**

**Peer Reviewer: Steve Gragert**

**Date Reviewed: 2/19/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| VMP-47-20-012113 | VMP-47-30-012113 |
| VMP-1-8.5-012113 | VMP-1-23.5-012113 |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes, however, professional judgment was used to qualify sample VMP-1-23.5-012113 due to the helium result in the sample (6.2%) that was greater than 10% of helium in the shroud (48.8%).

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

The laboratory case narrative indicated samples VMP-47-20-012113, VMP-47-30-012113, and VMP-1-8.5-012113 were diluted due to high levels of targets of analytes. Sample VMP-1-8.5-012113 was diluted and re-analyzed to bring butane and isopentane within the calibration range of the instrument. Butane and isopentane results were reported from the re-analysis run and the remaining compounds were reported from the original analysis. The TO-15 LCSD recovery for Freon 11 was outside evaluation criteria. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. The CCV recovery for 1,2,4-trichlorobenzene was outside evaluation criteria. These issues are addressed further in the appropriate sections below. The laboratory report was re-issued to report additional natural gas analytes via ASTM D-1945, and also the top five tentatively identified compounds (TICs) via TO-15. Additionally, the ethanol result was corrected in sample VMP-1-23.5-012113 due to laboratory error in having reported ethanol below the method detection limit.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1301354A-05A | TO-15 | Acetone | 0.67 ppbv / 1.6 µg/m$^3$ |
| 1301354A-05A | TO-15 | 4-Ethyltoluene | 0.093 ppbv / 0.46 µg/m$^3$ |
| 1301354A-05B | TO-15 | Ethanol | 8.0 ppbv / 15 µg/m$^3$ |
| 1301354A-05B | TO-15 | Methylene chloride | 1.1 ppbv / 3.8 µg/m$^3$ |
| 13013574B-05A | Natural gases | Nitrogen | 0.087% |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1301354A-07A/AA | TO-15 | Freon 11 | 71/**69** | 3 | 70-130/25 |

Analytical data that required qualification based on LCS data are included in the table below.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-1-8.5-012113 | TO-15 | Freon 11 | **UJ** |
| VMP-1-23.5-012113 | TO-15 | Freon 11 | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was used to qualify sample VMP-1-23.5-012113 due to the helium result in the sample (6.2%) that was greater than 10% of helium in the shroud (48.8%).

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-1-23.5-012113 | TO-15 | All detects | **J** |
| VMP-1-23.5-012113 | TO-15 | All non-detects | **UJ** |
| VMP-1-23.5-012113 | Natural gases | All detects | **J** |
| VMP-1-23.5-012113 | Natural gases | All non-detects | **UJ** |

Additionally, the CCV percent recovery for 1,2,4-trichlorobenzene was outside evaluation criteria as summarized in the table below.

| CCV ID | Parameter | Analyte | CCV Recovery | CCV Criteria |
|---|---|---|---|---|
| 1301354A-06A | TO-15 | 1,,2,4-Trichlorobenzene | **68** | 70-130 |

Data requiring qualification based on CCV recoveries are summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-1-8.5-012113 | TO-15 | 1,,2,4-Trichlorobenzene | **UJ** |
| VMP-1-23.5-012113 | TO-15 | 1,,2,4-Trichlorobenzene | **UJ** |

Workorder #: 1301354AR1

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/22/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1301354AR1**

Four 1 Liter Summa Canister samples were received on January 22, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit.

Due to high-level target compounds, sample VMP-1-8.5-012113 was analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

Dilution was performed on samples VMP-47-20-012113, VMP-47-30-012113, VMP-1-8.5-012113 and VMP-1-23.5-012113 due to the presence of high level target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

THE WORK ORDER WAS RE-ISSUED ON FEBRUARY 15, 2013 FOR THE FOLLOWING REASONS:

1. TO REPORT THE TOP 5 TENTATIVELY IDENTIFIED COMPOUNDS PER CLIENT'S REQUEST.

2. TO REMOVE RESULTS FOR ETHANOL IN SAMPLE VMP-1-23.5-012113 WHICH WAS PREVIOUSLY REPORTED WITH A VALUE OF LESS THAN THE METHOD DETECTION LIMIT DUE TO LABORATORY ERROR.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

eurofins | Air Toxics

2/12/2013
Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301354BR1

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/22/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1945 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1301354BR1**

Four 1 Liter Summa Canister samples were received on January 22, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

THE WORKORDER WAS REISSUED ON 02/12/13 TO REPORT ADDITIONAL COMPOUNDS FOR VMP-47-20-012113, VMP-47-30-012113, VMP-1-8.5-012113 and VMP-1-23.5-012113 PER CLIENT REQUEST.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples VMP-1-5-012313-R, VMP-1-8.5-012313-R, and VMP-47-10-012313-R were diluted and re-analyzed to bring the highest level target analytes within the calibration range of the instrument. Results for the highest level target analytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analyses. Samples were diluted due to high levels of target analytes. Although not indicated in the laboratory case narrative, nitrogen was detected in the method blank. The TO-15 LCS recovery for ethanol was outside evaluation criteria. These issues are addressed further in the appropriate sections below. The laboratory report was re-issued to report additional natural gas analytes via ASTM D-1945, and also the top five tentatively identified compounds (TICs) via TO-15.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1301399B-09A | Natural gases | Nitrogen | 0.078% |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

**5.0 Laboratory Control Sample**

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1301399A-11A/AA | TO-15 | Ethanol | **133**/118 | 12 | 70-130/25 |

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

**6.0 Surrogate Recoveries**

*Were surrogate recoveries within evaluation criteria?*

Yes

**7.0 Matrix Spike and Matrix Spike Duplicate Recoveries**

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

**8.0 Laboratory Duplicate Results**

*Were laboratory duplicate samples collected as part of this SDG?*

No

**9.0 Field Duplicate Results**

*Were field duplicate samples collected as part of this SDG?*

No

**10.0 Sample Dilutions**

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

**11.0 Additional Qualifications**

*Were additional qualifications applied?*

No

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301399AR1

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/24/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1301399AR1**

Eight 1 Liter Summa Canister samples were received on January 24, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Dilution was performed on samples VMP-1-5-012313-R, VMP-1-5-012313-R, VMP-1-8.5-012313-R, VMP-1-8.5-012313-R, VMP-1-23.5-012313-R, VMP-1-38.5-012313-R, VMP-47-5-012313-R, VMP-47-10-012313-R, VMP-47-10-012313-R, VMP-47-20-012313-R and VMP-47-30-012313-R due to the presence of high level target species.

Due to high-level target compounds, samples VMP-1-5-012313-R, VMP-1-8.5-012313-R and VMP-47-10-012313-R were analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

THE WORKORDER WAS REISSUED ON FEBRUARY 15, 2013 TO REPORT THE TOP 5 TENTATIVELY IDENTIFIED COMPOUNDS PER CLIENT'S REQUEST.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301399BR1

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/24/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1945 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner
Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1945**
**URS Corporation**
**Workorder# 1301399BR1**

Eight 1 Liter Summa Canister samples were received on January 24, 2013. The laboratory performed analysis via modified ASTM Method D-1945 for Methane and fixed gases in natural gas using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1945* | *ATL Modifications* |
|---|---|---|
| Normalization | Sum of original values should not differ from 100.0% by more than 1.0%. | Sum of original values may range between 85-115%. Normalization of data not performed. |
| Sample analysis | Equilibrate samples to 20-50° F. above source temperature at field sampling | No heating of samples is performed. |
| Sample calculation | Response factor is calculated using peak height for C5 and lighter compounds. | Peak areas are used for all target analytes to quantitate concentrations. |
| Reference Standard | Concentration should not be < half of nor differ by more than 2 X the concentration of the sample. Run 2 consecutive checks; must agree within 1%. | A minimum 3-point linear calibration is performed. The acceptance criterion is %RSD </= 15%. All target analytes must be within the linear range of calibration (with the exception of O2, N2, and C6+ Hydrocarbons). |
| Sample Injection Volume | 0.50 mL to achieve Methane linearity. | 1.0 mL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Due to the linear calibration range of the instrument, the reporting limit for Carbon Monoxide was raised from 0.01 % to 0.05 %.

THE WORKORDER WAS REISSUED ON 02/12/13 TO REPORT ADDITIONAL COMPOUNDS FOR VMP-1-5-012313-R, VMP-1-8.5-012313-R, VMP-1-23.5-012313-R, VMP-1-38.5-012313-R, VMP-47-5-012313-R, VMP-47-10-012313-R, VMP-47-20-012313-R and VMP-47-30-012313-R PER CLIENT REQUEST.

**Definition of Data Qualifying Flags**

Six qualifiers may have been used on the data analysis sheets and indicate as follows:
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

# Roxana Soil Vapor Quarterly – 1st Quarter 2013 Data Review

**Laboratory SDG: 1301501A,B**

**Data Reviewer: Alan Fleisher**

**Peer Reviewer: Elizabeth Kunkel**

**Date Reviewed: 3/19/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| VMP-5-5-012513 | VMP-5-12.5-012413 |
| VMP-5-31-012413 | VMP-5-40-012513 |
| VMP-5-40-012513-Dup | VMP-8-5-012413 |
| VMP-8-9.5-012413 | VMP-8-9.5-012413-Dup |
| VMP-8-23.5-012413 | VMP-18-8.5-012313 |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples VMP-5-31-012413, VMP-5-40-012513, and VMP-5-40-012513-Dup were diluted due to high levels of target analytes. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. The TO-15 LCSD recoveries for 1,2,4-trichlorobenzene were outside evaluation criteria. The difference in butane results for the field duplicate pair, VMP-5-40-012513/VMP-5-40-012513-Dup was greater than (2X) the reporting level; therefore, results were qualified as estimated. CCV recoveries for 1,2,4-trimethylbenzene were outside evaluation criteria. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| VMP-8-5-012413 | TO-15 | Methylene chloride | - | **U** |
| VMP-8-5-012413 | TO-15 | 1,4-Dichlorobenzene | - | **U** |
| VMP-8-9.5-012413 | TO-15 | Methylene chloride | - | **U** |
| VMP-8-9.5-012413 | TO-15 | Tetrachloroethene | - | **U** |
| VMP-8-9.5-012413 | TO-15 | 1,4-Dichlorobenzene | - | **U** |
| VMP-8-9.5-012413-Dup | TO-15 | Methylene chloride | - | **U** |

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| VMP-8-9.5-012413-Dup | TO-15 | Tetrachloroethene | - | **U** |
| VMP-8-23.5-012413 | TO-15 | Carbon disulfide | - | **U** |
| VMP-8-23.5-012413 | TO-15 | Methylene chloride | - | **U** |
| VMP-18-18.5-012313 | TO-15 | Methylene chloride | - | **U** |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1301501A-13A/AA | TO-15 | 1,2,4-Trichlorobenzene | 70**/69** | 1 | 70-130/25 |
| 1301501A-13B/BB | TO-15 | 1,2,4-Trichlorobenzene | 129/**131** | 2 | 70-130/25 |

Analytical data that required qualification based on LCS data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-5-5-012513 | TO-15 | 1,2,4-Trichlorobenzene | **UJ** |
| VMP-5-12.5-012413 | TO-15 | 1,2,4-Trichlorobenzene | **UJ** |
| VMP-5-31-012413 | TO-15 | 1,2,4-Trichlorobenzene | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-5-40-012513 | VMP-5-40-012513-Dup |
| VMP-8-9.5-012413 | VMP-8-9.5-012413-Dup |

*Were field duplicate sample RPDs within evaluation criteria?*

No

| Field ID | Field Duplicate ID | Parameter | Analyte | RPD | Qualification |
|---|---|---|---|---|---|
| VMP-5-40-012513 | VMP-5-40-012513-Dup | TO-15 | Butane | **>2X RL** | **J/J** |

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, continuing calibration verification (CCV) recoveries listed in the table below were above evaluation criteria.

| CCV ID | Parameter | Analyte | CCV Recovery | CCV Criteria |
|---|---|---|---|---|
| 1301501A-12B | TO-15 | 1,2,4-Trimethylbenzene | **131** | 70-130 |

Analytical data reported as non-detect and associated with CCV recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301501A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/28/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1301501A**

Ten 1 Liter Summa Canister samples were received on January 28, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on samples VMP-5-31-012413, VMP-5-40-012513, and VMP-5-40-012513-Dup due to the presence of high level target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301501B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/28/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1301501B**

Ten 1 Liter Summa Canister samples were received on January 28, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010 % to 0.050 %.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes, however analysis of sample VMP-20-5-012213 was cancelled due to the discovery of an open canister valve upon laboratory receipt. The sample vented to ambient pressure during shipment. Well VMP-20-5 was re-sampled on February 7, 2013, and results were reported in SDG 1302248A,B.

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate section below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1301504A-18A | TO-15 | Bromomethane | 0.26 ppbv / 0.99 µg/m$^3$ |

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1301504A-18A | TO-15 | Acetone | 0.45 ppbv / 1.1 µg/m$^3$ |
| 1301504A-18A | TO-15 | Carbon disulfide | 0.5 ppbv / 1.6 µg/m$^3$ |
| 1301504A-18A | TO-15 | Methylene chloride | 0.18 ppbv / 0.64 µg/m$^3$ |
| 1301504A-18A | TO-15 | trans-1,2-Dichloroethene | 0.12 ppbv / 0.48 µg/m$^3$ |
| 1301504A-18A | TO-15 | cis-1,3-Dichloropropene | 0.099 ppbv / 0.45 µg/m$^3$ |
| 1301504A-18A | TO-15 | Toluene | 0.064 ppbv / 0.24 µg/m$^3$ |
| 1301504A-18A | TO-15 | trans-1,3-Dichloropropene | 0.17 ppbv / 0.78 µg/m$^3$ |
| 1301504A-18A | TO-15 | 1,2-Dibromoethane (EDB) | 0.13 ppbv / 0.99 µg/m$^3$ |
| 1301504A-18A | TO-15 | Chlorobenzene | 0.11 ppbv / 0.49 µg/m$^3$ |
| 1301504A-18A | TO-15 | Propylbenzene | 0.079 ppbv / 0.39 µg/m$^3$ |
| 1301504A-18A | TO-15 | 4-Ethyltoluene | 0.067 ppbv / 0.33 µg/m$^3$ |
| 1301504A-18A | TO-15 | 1,2,4-Trimethylbenzene | 0.12 ppbv / 0.57 µg/m$^3$ |
| 1301504A-18A | TO-15 | 1,3-Dichlorobenzene | 0.26 ppbv / 1.6 µg/m$^3$ |
| 1301504A-18A | TO-15 | 1,4-Dichlorobenzene | 0.28 ppbv / 1.6 µg/m$^3$ |
| 1301504A-18A | TO-15 | alpha-Chlorotoluene | 0.14 ppbv / 0.71 µg/m$^3$ |
| 1301504A-18A | TO-15 | 1,2-Dichlorobenzene | 0.22 ppbv / 1.3 µg/m$^3$ |
| 1301504A-18A | TO-15 | 1,2,4-Trichlorobenzene | 0.92 ppbv / 6.8 µg/m$^3$ |
| 1301504A-18A | TO-15 | Hexachlorobutadiene | 0.29 ppbv / 3.0 µg/m$^3$ |
| 1301504B-18A | Natural gases | Nitrogen | 0.099% |

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| VMP-20-10-012213 | TO-15 | Carbon disulfide | - | **U** |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301504A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/28/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1301504A**

Seventeen 1 Liter Summa Canister samples were received on January 28, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

The canister valve on sample VMP-20-5-012213 was received open and a brass plug was not used to seal the canister. The sample vented to ambient pressure during shipment. The client was contacted, and the sample was cancelled.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Workorder #: 1301504B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/28/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Kelly Buettner
Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1301504B**

Seventeen 1 Liter Summa Canister samples were received on January 28, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

The canister valve on sample VMP-20-5-012213 was received open and a brass plug was not used to seal the canister. The sample vented to ambient pressure during shipment. The client was contacted and the sample was cancelled.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

# SVE System O&M 2013 Data Review

**Laboratory SDG: 1301530A,B,C**

**Data Reviewer: Elizabeth Kunkel**

**Peer Reviewer: Steve Gragert**

**Date Reviewed: 2/25/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| EXH-SVE-01162013 | MainHeader-SVE-01162013 |
| PWHeader-SVE-01162013 | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples MainHeader-SVE-01162013 and PWHeader-SVE-01162013 were diluted due to high levels of target analytes. Recovery of the surrogate fluorobenzene was outside evaluation criteria for TPH sample MainHeader-SVE-01162013 due to high levels of hydrocarbon matrix interference. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. The CCV recovery for ethanol was outside evaluation criteria. These issues are addressed further in the appropriate sections below.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/Amount |
|---|---|---|---|
| 1301530A-04A | TO-15 | Bromomethane | 0.26 ppbv / 1.0 µg/m$^3$ |
| 1301530A-04A | TO-15 | Ethanol | 0.61 ppbv / 1.1 µg/m$^3$ |
| 1301530A-04A | TO-15 | Carbon disulfide | 0.34 ppbv / 1.1 µg/m$^3$ |
| 1301530A-04A | TO-15 | Methylene chloride | 0.25 ppbv / 0.88 µg/m$^3$ |
| 1301530A-04A | TO-15 | 2,2,4-Trimethylpentane | 0.15 ppbv / 0.71 µg/m$^3$ |
| 1301530A-04A | TO-15 | Toluene | 0.060 ppbv / 0.23 µg/m$^3$ |
| 1301530A-04A | TO-15 | 1,3-Dichlorobenzene | 0.11 ppbv / 0.66 µg/m$^3$ |

| Blank ID | Parameter | Analyte | Concentration/Amount |
|---|---|---|---|
| 1301530A-04A | TO-15 | 1,4-Dichlorobenzene | 0.096 ppbv / 0.58 µg/m$^3$ |
| 1301530A-04A | TO-15 | 1,2,4-Trichlorobenzene | 0.33 ppbv / 2.4 µg/m$^3$ |
| 1301530A-04B | TO-15 | Methylene chloride | 1.0 ppbv / 3.6 µg/m$^3$ |
| 1301530A-04B | TO-15 | 1,4-Dichlorobenzene | 1.0 ppbv / 6.4 µg/m$^3$ |
| 1301530A-04B | TO-15 | alpha-Chlorotoluene | 1.0 ppbv / 5.4 µg/m$^3$ |
| 1301530A-04B | TO-15 | 1,2,4-Trichlorobenzene | 12 ppbv / 86 µg/m$^3$ |
| 1301530A-04B | TO-15 | Hexachlorobutadiene | 13 ppbv / 140 µg/m$^3$ |
| 1301530B-04A | TO-3 | TPH (C2-C10) | 0.014 ppmv/ 0.056 µg/L |
| 1301530C-04A | ASTM D-1945 | Nitrogen | 0.068% |

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| EXH-SVE-01162013 | TO-15 | Carbon disulfide | - | **U** |
| EXH-SVE-01162013 | TO-15 | Methylene chloride | - | **U** |
| EXH-SVE-01162013 | TO-15 | 1,3-Dichlorobenzene | - | **U** |
| EXH-SVE-01162013 | TO-15 | 1,4-Dichlorobenzene | - | **U** |
| EXH-SVE-01162013 | TO-15 | 1,2,4-Trichlorobenzene | - | **U** |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| MainHeader-SVE-01162013 | TO-3 | Fluorobenzene | **166** | 75-150 |

Analytical data that required qualification based on surrogate data are included in the table below.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MainHeader-SVE-01162013 | TO-3 | TPH (C2-C10) ref. to gasoline | **J** |

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples due to the inability to spike the samples in summa canisters.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, continuing calibration verification (CCV) recoveries listed in the table below were above evaluation criteria.

| CCV ID | Parameter | Analyte | CCV Recovery | CCV Criteria |
|---|---|---|---|---|
| 1301530A-05B | TO-15 | Ethanol | **138** | 70-130 |

Analytical data that required qualification based on CCV data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

| Field ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| EXH-SVE-01162013 | TO-15 | Ethanol | **J** |
| MainHeader-SVE-01162013 | TO-15 | Ethanol | **J** |

Workorder #: 1301530A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/30/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1301530A**

Three 1 Liter Summa Canister samples were received on January 30, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on samples MainHeader-SVE-01162013 and PWHeader-SVE-01162013 due to the presence of high level target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.

UJ- Non-detected compound associated with low bias in the CCV and/or LCS.

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Project Name: Roxana SVE O&M
Project #: 21562850.05000
Workorder #: 1301530B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/30/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-3 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-3**
**URS Corporation**
**Workorder# 1301530B**

Three 1 Liter Summa Canister samples were received on January 30, 2013. The laboratory performed analysis for volatile organic compounds in air via modified EPA Method TO-3 using gas chromatography with flame ionization detection. The TPH results are calculated using the response of Gasoline. A molecular weight of 100 is used to convert the TPH ppmv result to ug/L. The method involves concentrating up to 200 mL of sample. The concentrated aliquot is then dry purged to remove water vapor prior to entering the chromatographic system.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *TO-3* | *ATL Modifications* |
|---|---|---|
| Daily Calibration Standard Frequency | Prior to sample analysis and every 4 - 6 hrs | Prior to sample analysis and after the analytical batch </= 20 samples. |
| Initial Calibration Calculation | 4-point calibration using a linear regression model | 5-point calibration using average Response Factor |
| Initial Calibration Frequency | Weekly | When daily calibration standard recovery is outside 75 - 125 %, or upon significant changes to procedure or instrumentation |
| Moisture Control | Nafion system | Sorbent system |
| Minimum Detection Limit (MDL) | Calculated using the equation DL = A+3.3S, where A is intercept of calibration line and S is the standard deviation of at least 3 reps of low level standard | 40 CFR Pt. 136 App. B |
| Preparation of Standards | Levels achieved through dilution of gas mixture | Levels achieved through loading various volumes of the gas mixture |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The recovery of surrogate Fluorobenzene in sample MainHeader-SVE-01162013 was outside control limits due to high level hydrocarbon matrix interference. Data is reported as qualified.

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the deteetion limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second eolumn and detector
r1-File was requantified for the purpose of reissue

eurofins | Air Toxics

2/13/2013
Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana SVE O&M
Project #: 21562850.05000
Workorder #: 1301530C

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/30/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1945 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1945**
**URS Corporation**
**Workorder# 1301530C**

Three 1 Liter Summa Canister samples were received on January 30, 2013. The laboratory performed analysis via modified ASTM Method D-1945 for Methane and fixed gases in natural gas using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1945* | *ATL Modifications* |
|---|---|---|
| Normalization | Sum of original values should not differ from 100.0% by more than 1.0%. | Sum of original values may range between 85-115%. Normalization of data not performed. |
| Sample analysis | Equilibrate samples to 20-50° F. above source temperature at field sampling | No heating of samples is performed. |
| Sample calculation | Response factor is calculated using peak height for C5 and lighter compounds. | Peak areas are used for all target analytes to quantitate concentrations. |
| Reference Standard | Concentration should not be < half of nor differ by more than 2 X the concentration of the sample. Run 2 consecutive checks; must agree within 1%. | A minimum 3-point linear calibration is performed. The acceptance criterion is %RSD </= 15%. All target analytes must be within the linear range of calibration (with the exception of O2, N2, and C6+ Hydrocarbons). |
| Sample Injection Volume | 0.50 mL to achieve Methane linearity. | 1.0 mL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Six qualifiers may have been used on the data analysis sheets and indicate as follows:
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes, however, professional judgment was used to qualify sample VMP-44-30-012513 due to the helium result in the sample (9.9%) that was greater than 10% of helium in the shroud (61.0%).

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples VMP-20-39.5-012313, VMP-44-10-012513, and VMP-44-20-012513 were diluted due to high levels of target analytes. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1301555A-05A | TO-15 | Ethanol | 9.2 ppbv / 17 µg/m$^3$ |
| 1301555A-05A | TO-15 | Methylene chloride | 0.95 ppbv / 3.3 µg/m$^3$ |
| 1301555B-05A | Natural gases | Nitrogen | 0.085% |
| 1301555B-05C | Natural gases | Nitrogen | 0.089% |

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| VMP-44-30-012513 | TO-15 | Ethanol | - | **U** |
| VMP-44-30-012513 | TO-15 | Methylene chloride | - | **U** |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, professional judgment was used to qualify sample VMP-44-30-012513 due to a helium result in the sample (6.6%) that was greater than 10% of helium in the shroud (57.8%).

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-44-30-012513 | TO-15 | All detects | **J** |
| VMP-44-30-012513 | TO-15 | All non-detects | **UJ** |
| VMP-44-30-012513 | Natural gases | All detects | **J** |
| VMP-44-30-012513 | Natural gases | All non-detects | **UJ** |

Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301555A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/31/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1301555A**

Four 1 Liter Summa Canister samples were received on January 31, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on samples VMP-20-39.5-012313, VMP-44-10-012513, and VMP-44-20-012513 due to the presence of high level target species.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301555B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/31/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1301555B**

Four 1 Liter Summa Canister samples were received on January 31, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples VMP-11-5-012913 and VMP-11-8-012913 were diluted due to high levels of target analytes. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. The Summa Canister for sample VMP-9-5-012513 was found to be leaking prior to ASTM D-1946 analysis; analyte concentrations were reported as qualified. The differences in 2-propanol, butane, and isopentane results for the field duplicate pair, VMP-9-11.5-012513/VMP-9-11.5-012513-Dup were greater than (2X) the reporting level; therefore, results were qualified as estimated. The differences in butane and isopentane results for the field duplicate pair, VMP-10-5-012913/VMP-10-5-012913-Dup were greater than (2X) the reporting level; therefore, results were qualified as estimated. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-9-11.5-012513 | VMP-9-11.5-012513-Dup |
| VMP-10-5-012913 | VMP-10-5-012913-Dup |

*Were field duplicate sample RPDs within evaluation criteria?*

No

| Field ID | Field Duplicate ID | Parameter | Analyte | RPD | Qualification |
|---|---|---|---|---|---|
| VMP-9-11.5-012513 | VMP-9-11.5-012513-Dup | TO-15 | 2-Propanol | **>2X RL** | **J/J** |
| VMP-9-11.5-012513 | VMP-9-11.5-012513-Dup | TO-15 | Butane | **>2X RL** | **J/J** |
| VMP-9-11.5-012513 | VMP-9-11.5-012513-Dup | TO-15 | Isopentane | **>2X RL** | **J/J** |
| VMP-10-5-012913 | VMP-10-5-012913-Dup | TO-15 | Butane | **>2X RL** | **J/J** |
| VMP-10-5-012913 | VMP-10-5-012913-Dup | TO-15 | Isopentane | **>2X RL** | **J/J** |

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, the Summa Canister for sample VMP-9-5-012513 was found to be leaking prior to ASTM D-1946 analysis; analyte concentrations were qualified for this sample as summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-9-5-012513 | TO-15 | All detects | **J** |
| VMP-9-5-012513 | TO-15 | All non-detects | **UJ** |
| VMP-9-5-012513 | Natural gases | All detects | **J** |
| VMP-9-5-012513 | Natural gases | All non-detects | **UJ** |

St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301567A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/31/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1301567A**

Seventeen 1 Liter Summa Canister samples were received on January 31, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on samples VMP-11-5-012913 and VMP-11-8-012913 due to the presence of high level target species.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

eurofins | Air Toxics

2/21/2013
Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1301567B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 1/31/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner
Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1301567B**

Seventeen 1 Liter Summa Canister samples were received on January 31, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole pereent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.01% to 0.05%.

The Summa Canister for sample VMP-9-5-012513 was found to be leaking prior to ASTM D-1946 analysis. Analyte concentrations are reported as qualified.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated sample VMP-45-30-013013 was diluted due to high levels of target analytes. Samples VMP-17-5-013113 and VMP-17-5-013113-Dup were diluted due to high levels of non-target analytes. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302070A-21A | TO-15 | Carbon disulfide | 0.35 ppbv / 1.1 µg/m$^3$ |
| 1302070A-21A | TO-15 | Methylene chloride | 0.096 ppbv / 0.33 µg/m$^3$ |
| 1302070A-21A | TO-15 | Toluene | 0.085 ppbv / 0.32 µg/m$^3$ |
| 1302070A-21A | TO-15 | trans-1,3-Dichloroethene | 0.13 ppbv / 0.61 µg/m$^3$ |
| 1302070A-21A | TO-15 | Tetrachloroethene | 0.13 ppbv / 0.87 µg/m$^3$ |
| 1302070A-21A | TO-15 | 1,2-Dibromoethane (EDB) | 0.15 ppbv / 1.2 µg/m$^3$ |
| 1302070A-21A | TO-15 | Chlorobenzene | 0.17 ppbv / 0.79 µg/m$^3$ |
| 1302070A-21A | TO-15 | Ethyl benzene | 0.13 ppbv / 0.55 µg/m$^3$ |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-17-5-013113 | VMP-17-5-013113-Dup |

*Were field duplicate sample RPDs within evaluation criteria?*

Yes

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302070A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/4/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302070A**

Twenty 1 Liter Summa Canister samples were received on February 05, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on sample VMP-45-30-013013 due to the presence of high level target species.

Dilution was performed on samples VMP-17-5-013113 and VMP-17-5-013113-DUP due to the presence of high level non-target species.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

eurofins | Air Toxics

2/16/2013
Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302070B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/4/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1302070B**

Twenty 1 Liter Summa Canister samples were received on February 04, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

# Roxana Soil Vapor Quarterly – 1st Quarter 2013 Data Review

**Laboratory SDG: 1302081A,B**

**Data Reviewer: Alan Fleisher**

**Peer Reviewer: Elizabeth Kunkel**

**Date Reviewed: 3/21/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| VMP-2-42-013113 | VMP-13-29.5-013013 |
| VMP-14-20-013113 | VMP-14-29-013113 |
| VMP-14-29-013113-Dup | VMP-49-30-020113 |
| VMP-50-20-020113 | VMP-50-30-020113 |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples VMP-2-42-013113, VMP-14-20-013113, and VMP-14-29-013113 were diluted and re-analyzed to bring the highest level target analytes within the calibration range of the instrument. Results for the highest level target analytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analyses. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302081A-09A | TO-15 | Carbon disulfide | 0.30 ppbv / 0.92 µg/m$^3$ |
| 1302081A-09A | TO-15 | Methylene chloride | 0.099 ppbv / 0.34 µg/m$^3$ |
| 1302081A-09A | TO-15 | 4-Ethyltoluene | 0.063 ppbv / 0.31 µg/m$^3$ |
| 1302081A-09A | TO-15 | 1,3-Dichlorobenzene | 0.13 ppbv / 0.81 µg/m$^3$ |
| 1302081A-09A | TO-15 | 1,4-Dichlorobenzene | 0.17 ppbv / 1.0 µg/m$^3$ |

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302081A-09A | TO-15 | alpha-Chlorotoluene | 0.098 ppbv / 0.51 µg/$m^3$ |
| 1302081A-09A | TO-15 | 1,2-Dichlorobenzene | 0.12 ppbv / 0.69 µg/$m^3$ |
| 1302081A-09A | TO-15 | 1,2,4-Trichlorobenzene | 0.69 ppbv / 5.1µg/$m^3$ |
| 1302081A-09A | TO-15 | Hexachlorobutadiene | 0.27 ppbv / 2.9 µg/$m^3$ |
| 1302081B-09A | Natural gases | Nitrogen | 0.083% |

Analytical data reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-14-29-013113 | VMP-14-29-013113-Dup |

*Were field duplicate sample RPDs within evaluation criteria?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

Project #: 21562850.04001
Workorder #: 1302081A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/5/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302081A**

Eight 1 Liter Summa Canister samples were received on February 05, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on all of the samples due to the presence of high level target species.

Due to high-level target compounds, samples VMP-2-42-013113, VMP-14-20-013113, and VMP-14-29-013113 were analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project #: 21562850.04001
Workorder #: 1302081B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/5/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1302081B**

Eight 1 Liter Summa Canister samples were received on February 05, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

The Chain of Custody (COC) information for sample VMP-14-29-013113-DUP did not match the entry on the sample tag with regard to sample identification. The information on the sample tag was used to process and report the sample.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes, however analysis of sample VMP-51-20-020113 was cancelled by URS due to laboratory notification of canister valve leaking upon sample receipt.

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated sample VMP-48-30-020113 was diluted and re-analyzed to bring the highest level target analytes with the calibration range of the instrument. Results for the highest level target analytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analysis. Samples VMP-48-30-020113 and VMP-48-30-020113-Dup were diluted due to high levels of target analytes. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples analyzed as part of this SDG?*

Yes, sample VMP-51-30-020413-Dup was duplicated and analyzed for all TO-15 analytes.

*Were laboratory duplicate sample RPDs within evaluation criteria?*

Yes

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-48-30-020113 | VMP-48-30-020113-Dup |
| VMP-52-20-020413 | VMP-52-20-020413-Dup |

*Were field duplicate sample RPDs within evaluation criteria?*

No

| Field ID | Field Duplicate ID | Parameter | Analyte | RPD | Qualification |
|---|---|---|---|---|---|
| VMP-48-30-020113 | VMP-48-30-020113-Dup | TO-15 | Freon 12 | **>2X RL** | **J/UJ** |
| VMP-48-30-020113 | VMP-48-30-020113-Dup | TO-15 | Acetone | **>2X RL** | **J/UJ** |
| VMP-48-30-020113 | VMP-48-30-020113-Dup | TO-15 | 2-Propanol | **>2X RL** | **J/UJ** |
| VMP-48-30-020113 | VMP-48-30-020113-Dup | TO-15 | Ethyl benzene | **>2X RL** | **J/UJ** |
| VMP-48-30-020113 | VMP-48-30-020113-Dup | TO-15 | o-Xylene | **>2X RL** | **J/UJ** |
| VMP-52-20-020413 | VMP-52-20-020413-Dup | TO-15 | Benzene | **>2X RL** | **J/J** |

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302083A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/5/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302083A**

Sixteen 1 Liter Summa Canister samples were received on February 05, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

Sample VMP-51-20-020113 was cancelled on February 15, 2013 per client's request.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Due to high-level target compounds, sample VMP-48-30-020113 was analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

Dilution was performed on samples VMP-48-30-020113 and VMP-48-30-020113-DUP due to the presence of high level target species.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

eurofins | Air Toxics

2/19/2013
Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302083B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/5/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1302083B**

Sixteen 1 Liter Summa Canister samples were received on February 05, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The Summa canister for sample VMP-51-20-020113 was leaking at the time of ASTM D-1946 analysis. The client was notified and the analysis was cancelled.

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples VMP-29-30-020613 and VMP-30-30-020613 were diluted and re-analyzed to bring the highest level target analytes within the calibration range of the instrument. Results for the highest level target anlaytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analyses. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302156A-27A | TO-15 | Bromomethane | 0.30 ppbv / 1.2 µg/m$^3$ |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-21-10-020513 | VMP-21-10-020513-Dup |
| VMP-21-25-020513 | VMP-21-25-020513-Dup |
| VMP-53-10-020513 | VMP-53-10-020513-Dup |

*Were field duplicate sample RPDs within evaluation criteria?*

Yes

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302156A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/8/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302156A**

Twenty-six 1 Liter Summa Canister samples were received on February 08, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Due to high-level target compounds, samples VMP-29-30-020613 and VMP-30-30-020613 were analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

eurofins | Air Toxics

2/22/2013
Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302156B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/8/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1302156B**

Twenty-six 1 Liter Summa Canister samples were received on February 08, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated sample VMP-6-5-021213 was diluted and re-analyzed to bring the highest level target analytes within the calibration range of the instrument. Results for the highest level target anlaytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analysis. The difference in benzene results for the field duplicate pair VMP-54-30-020613/VMP-54-30-020613-Dup was greater than two times (2X) the reporting level; therefore, results were qualified as estimated. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| VMP-4-12-020713 | VMP-4-12-020713-Dup |
| VMP-54-20-020613 | VMP-54-20-020613-Dup |
| VMP-54-30-020613 | VMP-54-30-020613-Dup |

*Were field duplicate sample RPDs within evaluation criteria?*

No

| Field ID | Field Duplicate ID | Parameter | Analyte | RPD | Qualification |
|---|---|---|---|---|---|
| VMP-54-30-020613 | VMP-54-30-020613-Dup | TO-15 | Benzene | **>2X RL** | **J/J** |

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302248A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/14/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302248A**

Fourteen 1 Liter Summa Canister samples were received on February 14, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Due to high-level target compounds, sample VMP-6-5-021213 was analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project #: 21562850.04001
Workorder #: 1302248B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/14/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1302248B**

Fourteen 1 Liter Summa Canister samples were received on February 14, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated sample VMP-15-29-021213 was diluted and re-analyzed to bring the highest level target analytes with the calibration range of the instrument. Results for the highest level target analytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analysis. The TO-15 LCS/LCSD recoveries for 2-hexanone and 4-methyl-2-pentanone were outside evaluation criteria. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302278A-11A | TO-15 | 1,3-Butadiene | 0.74 ppbv / 1.6 µg/m$^3$ |

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302278A-11A | TO-15 | Methylene chloride | 1.7 ppbv / 6.0 µg/m$^3$ |
| 1302278A-11B | TO-15 | Methylene chloride | 2.0 ppbv / 7.1 µg/m$^3$ |
| 1302278A-11C | TO-15 | Carbon disulfide | 0.36 ppbv / 1.1 µg/m$^3$ |
| 1302278A-11C | TO-15 | Methylene chloride | 0.066 ppbv / 0.23 µg/m$^3$ |
| 1302278A-11C | TO-15 | 2,2,4-Trimethylpentane | 0.064 ppbv / 0.30 µg/m$^3$ |
| 1302278A-11C | TO-15 | Toluene | 0.039 ppbv / 0.14 µg/m$^3$ |
| 1302278A-11C | TO-15 | Propylbenzene | 0.053 ppbv / 0.26 µg/m$^3$ |
| 1302278A-11C | TO-15 | 4-Ethyltoluene | 0.043 ppbv / 0.21 µg/m$^3$ |
| 1302278A-11C | TO-15 | 1,3-Dichlorobenzene | 0.13 ppbv / 0.79 µg/m$^3$ |
| 1302278A-11C | TO-15 | 1,4-Dichlorobenzene | 0.15 ppbv / 0.92 µg/m$^3$ |
| 1302278A-11C | TO-15 | 1,2-Dichlorobenzene | 0.10 ppbv / 0.62 µg/m$^3$ |
| 1302278A-11C | TO-15 | 1,2,4-Trichlorobenzene | 0.48 ppbv / 3.6 µg/m$^3$ |
| 1302278A-11C | TO-15 | Hexachlorobutadiene | 0.20 ppbv / 2.2 µg/m$^3$ |
| 1302278B-11A | Natural gases | Nitrogen | 0.057% |

Analytical data were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration and did not require qualification.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1302278A-13A/AA | TO-15 | 2-Hexanone | **69/67** | 3 | 70-130/25 |
| 1302278A-13B/BB | TO-15 | 4-Methyl-2-pentanone | **68/68** | 0 | 70-130/25 |
| 1302278A-13B/BB | TO-15 | 2-Hexanone | **66/61** | 8 | 70-130/25 |

Analytical data that required qualification based on LCS/LCSD data are included in the table below.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-3-31.5-020713 | TO-15 | 2-Hexanone | **UJ** |
| VMP-3-39-021213 | TO-15 | 2-Hexanone | **UJ** |
| VMP-4-23.5-020713 | TO-15 | 4-Methyl-2-pentanone | **UJ** |
| VMP-4-23.5-020713 | TO-15 | 2-Hexanone | **UJ** |
| VMP-4-39-020713 | TO-15 | 4-Methyl-2-pentanone | **UJ** |
| VMP-4-39-020713 | TO-15 | 2-Hexanone | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

Project #: 21562850.04001
Workorder #: 1302278A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/15/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302278A**

Ten 1 Liter Summa Canister samples were received on February 15, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

The Chain of Custody (COC) information for sample VMP-31-20-021113 did not match the information on the canister with regard to canister identification. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

Dilution was performed on all samples due to the presence of high level target species.

Due to the linear calibration range of instrument MSD-14, the reporting limit for 4-Methyl-2-pentanone was raised from 5.0ppbv to 20ppbv.

Due to high-level target compounds, sample VMP-15-29-021213 was analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.

UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302278B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/15/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1302278B**

Ten 1 Liter Summa Canister samples were received on February 15, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

The Chain of Custody (COC) information for sample VMP-31-20-021113 did not match the information on the canister with regard to canister identification. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes.

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples VMP-16-13.5-021413 and VMP-16-19-021413 were diluted and re-analyzed to bring the highest level target analytes with the calibration range of the instrument. Results for the highest level target analytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analyses. All samples were diluted due to high levels of target analytes. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302355A-08A | TO-15 | Methylene chloride | 2.2 ppbv / 7.6 µg/m$^3$ |
| 1302355A-08B | TO-15 | Ethanol | 11 ppbv / 22 µg/m$^3$ |
| 1302355A-08B | TO-15 | Methylene chloride | 1.4 ppbv / 4.9 µg/m$^3$ |
| 1302355A-08B | TO-15 | alpha-Chlorotoluene | 1.1 ppbv / 5.8 µg/m$^3$ |

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302083B-17A | Natural gases | Oxygene | 0.034% |
| 1302083B-17A | Natural gases | Nitrogen | 0.064% |

Analytical data reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1302355A-10B/BB | TO-15 | alpha-Chlorotoluene | **139/**120 | 15 | 70-130/25 |
| 1302355A-10B/BB | TO-15 | 1,2,4-Trichlorobenzene | 119/85 | **33** | 70-130/25 |
| 1302355A-10B/BB | TO-15 | Hexachlorobutadiene | 112/84 | **29** | 70-130/25 |

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Analytical data associated with LCS/LCSD RPD alone outside evaluation criteria did not require qualification; LCS/LCSD recoveries were within evaluation criteria. No qualification of data was required.

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Surrogate Recovery | Surrogate Recovery Criteria |
|---|---|---|---|---|
| VMP-12-25-021513 | TO-15 | 1,2-Dichloroethane-d4 | **135** | 70-130 |
| VMP-16-5-021413 | TO-15 | 1,2-Dichloroethane-d4 | **132** | 70-130 |
| VMP-16-13.5-021413 | TO-15 | 1,2-Dichloroethane-d4 | **147** | 70-130 |
| VMP-16-19-021413 | TO-15 | 1,2-Dichloroethane-d4 | **160** | 70-130 |

Analytical data that required qualification based on surrogate recovery data are included in the table below. Analytical data reported as non-detect and associated with surrogate recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-12-25-021513 | TO-15 | VOC detects | **J** |
| VMP-16-5-021413 | TO-15 | VOC detects | **J** |
| VMP-16-13.5-021413 | TO-15 | VOC detects | **J** |
| VMP-16-19-021413 | TO-15 | VOC detects | **J** |

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302355A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/20/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302355A**

Seven 1 Liter Summa Canister samples were received on February 20, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on all of the samples due to the presence of high level target species.

Due to high-level target compounds, samples VMP-16-13.5-021413 and VMP-16-19-021413 were analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

The Relative Percent Difference (RPD) of the LCS/LCSD performed on 02/28/2013 exceeded acceptance limits for 1,2,4-Trichlorobenzene and Hexachlorobutadiene.

The recovery of surrogate 1,2-Dichloroethane-d4 in samples VMP-12-25-021513, VMP-16-5-021413, VMP-16-13.5-021413, and VMP-16-19-021413 "B" fraction was outside laboratory control limits due to high level hydrocarbon matrix interference. The surrogate recovery is flagged.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

Due to the linear calibration range of the instrument, the reporting limit for 4-Methyl-2-pentanone was raised from 5.0 ppbv to 20 ppbv.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Workorder #: 1302355B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/20/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1302355B**

Seven 1 Liter Summa Canister samples were received on February 20, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

# Roxana Soil Vapor Quarterly – 1st Quarter 2013 Data Review

**Laboratory SDG: 1302356A,B**

**Data Reviewer: Alan Fleisher**

**Peer Reviewer: Elizabeth Kunkel**

**Date Reviewed: 3/25/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| VMP-9-5-021513 | VMP-12-5-021813 |
| VMP-12-11.5-021813 | VMP-31-10-021313 |
| VMP-51-20-021513-R | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Sample VMP-31-10-021313 was logged incorrectly by the laboratory. The sample ID was manually changed by the data reviewer. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. The TO-15 LCS/LCSD recoveries for 1,2,4-trichlorobenzene were outside evaluation criteria. CCV recoveries for 1,2,4-trimethylbenzene were outside evaluation criteria. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1302356A-06A | TO-15 | Bromomethane | 0.35 ppbv / 1.4 µg/m$^3$ |
| 1302356A-06A | TO-15 | Methylene chloride | 0.077 ppbv / 0.27 µg/m$^3$ |
| 1302356A-06A | TO-15 | Trans-1,3-Dichloropropene | 0.071 ppbv / 0.32 µg/m$^3$ |
| 1302356A-06A | TO-15 | 1,4-Dichlorobenzene | 0.068 ppbv / 0.41 µg/m$^3$ |
| 1302356B-06A | Natural gases | Nitrogen | 0.045% |

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| VMP-9-5-021513 | TO-15 | 1,4-Dichlorobenzene | - | **U** |
| VMP-9-5-021513 | TO-15 | Trans-1,3-Dichloropropene | - | **U** |
| VMP-12-5-021813 | TO-15 | 1,4-Dichlorobenzene | - | **U** |
| VMP-12-5-021813 | TO-15 | Trans-1,3-Dichloropropene | - | **U** |
| VMP-31-10-021313 | TO-15 | Methylene chloride | - | **U** |
| VMP-31-10-021313 | TO-15 | Trans-1,3-Dichloropropene | - | **U** |
| VMP-31-10-021313 | TO-15 | 1,4-Dichlorobenzene | - | **U** |
| VMP-51-20-021513-R | TO-15 | Methylene chloride | - | **U** |
| VMP-51-20-021513-R | TO-15 | 1,4-Dichlorobenzene | - | **U** |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1302356A-08A/AA | TO-15 | 1,2,4-Trichlorobenzene | **132/135** | 2 | 70-130/25 |

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Associated positive detections were previously qualified based on CCV recoveries; further action was not required.

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, continuing calibration verification (CCV) recoveries listed in the table below were above evaluation criteria.

| CCV ID | Parameter | Analyte | CCV Recovery | CCV Criteria |
|---|---|---|---|---|
| 1302356A-07A | TO-15 | 1,2,4-Trimethylbenzene | **131** | 70-130 |

Analytical data that required qualification based on CCV data are included in the table below. Analytical data reported as non-detect and associated with CCV recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

| Field ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-9-5-021513 | TO-15 | 1,2,4-Trimethylbenzene | **J** |
| VMP-12-5-021813 | TO-15 | 1,2,4-Trimethylbenzene | **J** |
| VMP-31-10-021313 | TO-15 | 1,2,4-Trimethylbenzene | **J** |
| VMP-51-20-021513-R | TO-15 | 1,2,4-Trimethylbenzene | **J** |

Workorder #: 1302356A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/20/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302356A**

Five 1 Liter Summa Canister samples were received on February 20, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

eurofins | Air Toxics

3/14/2013
Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1302356B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/20/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1302356B**

Five 1 Liter Summa Canister samples were received on February 20, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.010% to 0.050%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

# SVE System O&M 2013 Data Review

**Laboratory SDG: 1302458A,B,C**

**Data Reviewer: Elizabeth Kunkel**

**Peer Reviewer: Steve Gragert**

**Date Reviewed: 3/18/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| EXH-SVE-02202013 | MainHeader-SVE-02202013 |
| PWHeader-SVE-02202013 | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples EXH-SVE-02202013, MainHeadrer-SVE-02202013, and PWHeader-SVE-02202013 were diluted due to high levels of target analytes. Recovery of the surrogate fluorobenzene was outside evaluation criteria for TPH sample MainHeader-SVE-02202013 due to high levels of hydrocarbon matrix interference. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. The CCV recovery for bromomethane was outside evaluation criteria. These issues are addressed further in the appropriate sections below. The reporting limit for 4-methyl-2-pentanone was raised from 5.0 ppbv to 20 ppbv; 4-methyl-2-pentanone was not detected in samples for this SDG. For purposes of compliance monitoring, concentrations of non-detects are calculated as being equal to half of the reporting limit.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/Amount |
|---|---|---|---|
| 1302458A-04A | TO-15 | Ethanol | 12 ppbv / 23 µg/$m^3$ |
| 1302458A-04A | TO-15 | Methylene chloride | 1.7 ppbv / 5.9 µg/$m^3$ |
| 1302458A-04A | TO-15 | alpha-Chlorotoluene | 1.0 ppbv / 5.5 µg/$m^3$ |

| Blank ID | Parameter | Analyte | Concentration/Amount |
|---|---|---|---|
| 1302458A-04A | TO-15 | Isopentane | 3.9 ppbv / 11 µg/$m^3$ |
| 1302458B-04A | TO-3 | TPH (C2-C10) | 0.012 ppmv/ 0.049 µg/L |
| 1302458C-04A | ASTM D-1945 | Nitrogen | 0.076% |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/ LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1302458A-06A/AA | TO-15 | trans-1,2-Dichloroethene | 127**/133** | 5 | 70-130/25 |

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| MainHeader-SVE-02202013 | TO-3 | Fluorobenzene | **214** | 75-150 |

Analytical data that required qualification based on surrogate data are included in the table below.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MainHeader-SVE-02202013 | TO-3 | TPH (C2-C10) ref. to gasoline | **J** |

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples due to the inability to spike the samples in summa canisters.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, continuing calibration verification (CCV) recoveries listed in the table below were below evaluation criteria.

| CCV ID | Parameter | Analyte | CCV Recovery | CCV Criteria |
|---|---|---|---|---|
| 1302458A-05A | TO-15 | Bromomethane | **69** | 70-130 |

Analytical data that required qualification based on CCV data are included in the table below.

| Field ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| EXH-SVE-02202013 | TO-15 | Bromomethane | **UJ** |
| MainHeader-SVE-02202013 | TO-15 | Bromomethane | **UJ** |
| PWHeader-SVE-02202013 | TO-15 | Bromomethane | **UJ** |

Workorder #: 1302458A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/25/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1302458A**

Three 1 Liter Summa Canister samples were received on February 25, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on all of the samples due to the presence of high level target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

Due to the linear calibration range of the instrument, the reporting limit for 4-Methyl-2-pentanone was raised from 5.0 ppbv to 20 ppbv.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Roxana SVE O&M
Project #: 21562850.05000
Workorder #: 1302458B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/25/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-3 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-3**
**URS Corporation**
**Workorder# 1302458B**

Three 1 Liter Summa Canister samples were received on February 25, 2013. The laboratory performed analysis for volatile organic compounds in air via modified EPA Method TO-3 using gas chromatography with flame ionization detection. The TPH results are calculated using the response of Gasoline. A molecular weight of 100 is used to convert the TPH ppmv result to ug/L. The method involves concentrating up to 200 mL of sample. The concentrated aliquot is then dry purged to remove water vapor prior to entering the chromatographic system.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *TO-3* | *ATL Modifications* |
|---|---|---|
| Daily Calibration Standard Frequency | Prior to sample analysis and every 4 - 6 hrs | Prior to sample analysis and after the analytical batch </= 20 samples. |
| Initial Calibration Calculation | 4-point calibration using a linear regression model | 5-point calibration using average Response Factor |
| Initial Calibration Frequency | Weekly | When daily calibration standard recovery is outside 75 - 125 %, or upon significant changes to procedure or instrumentation |
| Moisture Control | Nafion system | Sorbent system |
| Minimum Detection Limit (MDL) | Calculated using the equation DL = A+3.3S, where A is intercept of calibration line and S is the standard deviation of at least 3 reps of low level standard | 40 CFR Pt. 136 App. B |
| Preparation of Standards | Levels achieved through dilution of gas mixture | Levels achieved through loading various volumes of the gas mixture |

**Recciving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The recovery of surrogate Fluorobenzene in sample MainHeader-SVE-02202013 was outside control limits due to high level hydrocarbon matrix interference. Data is reported as qualified.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Workorder #: 1302458C

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 2/25/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1945 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**Modified ASTM D-1945**
**URS Corporation**
**Workorder# 1302458C**

Three 1 Liter Summa Canister samples were received on February 25, 2013. The laboratory performed analysis via modified ASTM Method D-1945 for Methane and fixed gases in natural gas using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1945* | *ATL Modifications* |
|---|---|---|
| Normalization | Sum of original values should not differ from 100.0% by more than 1.0%. | Sum of original values may range between 85-115%. Normalization of data not performed. |
| Sample analysis | Equilibrate samples to 20-50° F. above source temperature at field sampling | No heating of samples is performed. |
| Sample calculation | Response factor is calculated using peak height for C5 and lighter compounds. | Peak areas are used for all target analytes to quantitate concentrations. |
| Reference Standard | Concentration should not be < half of nor differ by more than 2 X the concentration of the sample. Run 2 consecutive checks; must agree within 1%. | A minimum 3-point linear calibration is performed. The acceptance criterion is %RSD </= 15%. All target analytes must be within the linear range of ealibration (with the exception of O2, N2, and C6+ Hydrocarbons). |
| Sample Injection Volume | 0.50 mL to achieve Methane linearity. | 1.0 mL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

Since Nitrogen is used to pressurize samples, the Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The reporting limit for Carbon Monoxide was raised from 0.01% to 0.05%.

**Definition of Data Qualifying Flags**

Six qualifiers may have been used on the data analysis sheets and indicate as follows:
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

# SVE System O&M 2013 Data Review

**Laboratory SDG: 1303139A,B,C**

**Data Reviewer: Elizabeth Kunkel**

**Peer Reviewer: Steve Gragert**

**Date Reviewed: 3/25/2013**

**Guidance: USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2008**

| Sample Identification | Sample Identification |
|---|---|
| EXH-SVE-03012013 | Main Header-SVE-03012013 |
| PWHeader-SVE-03012013 | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated samples were diluted due to high levels of target analytes. Recovery of the surrogate fluorobenzene was outside evaluation criteria for TPH samples EXH-SVE-03012013 and Main Header-SVE-03012013 due to high levels of hydrocarbon matrix interference. ASTM D-1945 samples EXH-SVE-03012013, Main Header-SVE-03012013, and PWHeader-SVE-03012013 were analyzed 5 days outside the project requested holding time (14 days), but within the method required holding time (30 days). Although not indicated in the laboratory case narrative, analytes were detected in the method blank. LCS recoveries for 3-chloropropene, 4-methyl-2-pentanone, and alpha-chlorotoluene were outside evaluation criteria. These issues are addressed further in the appropriate sections below.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes, however ASTM D-1945 samples EXH-SVE-03012013, Main Header-SVE-03012013, and PWHeader-SVE-03012013 were analyzed 5 days outside the project requested holding time (14 days), but within the method required holding time (30 days). No qualification of data was required.

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/Amount |
|---|---|---|---|
| 1303139A-04A | TO-15 | Bromomethane | 0.28 ppbv / 1.1 µg/m$^3$ |

| Blank ID | Parameter | Analyte | Concentration/Amount |
|---|---|---|---|
| 1303139A-04A | TO-15 | Carbon disulfide | 0.50 ppbv / 1.5 µg/m$^3$ |
| 1303139A-04A | TO-15 | Methylene chloride | 0.14 ppbv / 0.49 µg/m$^3$ |
| 1303139A-04A | TO-15 | Toluene | 0.036 ppbv / 0.14 µg/m$^3$ |
| 1303139A-04A | TO-15 | Chlorobenzene | 0.071 ppbv / 0.33 µg/m$^3$ |
| 1303139A-04A | TO-15 | Propylbenzene | 0.077 ppbv / 0.38 µg/m$^3$ |
| 1303139A-04A | TO-15 | 4-Ethyltoluene | 0.087 ppbv / 0.43 µg/m$^3$ |
| 1303139A-04A | TO-15 | 1,3,5-Trimethylbenzene | 0.14 ppbv / 0.69 µg/m$^3$ |
| 1303139A-04A | TO-15 | 1,2,4-Trimethylbenzene | 0.13 ppbv / 0.64 µg/m$^3$ |
| 1303139A-04A | TO-15 | 1,3-Dichlorobenzene | 0.24 ppbv / 1.4 µg/m$^3$ |
| 1303139A-04A | TO-15 | 1,4-Dichlorobenzene | 0.26 ppbv / 1.5 µg/m$^3$ |
| 1303139A-04A | TO-15 | alpha-Chlorotoluene | 0.15 ppbv / 0.77 µg/m$^3$ |
| 1303139A-04A | TO-15 | 1,2-Dichlorobenzene | 0.24 ppbv / 1.4 µg/m$^3$ |
| 1303139A-04A | TO-15 | 1,2,4-Trichlorobenzene | 1.0 ppbv / 7.4 µg/m$^3$ |
| 1303139A-04A | TO-15 | Hexachlorobutadiene | 0.57 ppbv / 6.1 µg/m$^3$ |
| 1303139B-04A | ASTM D-1945 | Methane | 0.000030% |
| 1303139B-04A | ASTM D-1945 | Oxygen | 0.016% |
| 1303139B-04A | ASTM D-1945 | Nitrogen | 0.098% |
| 1303139C-04A | TO-3 | TPH (C2-C10) ref. to gasoline | 0.010 ppmv/0.043 µg/L |

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. No qualification of data was required.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/ LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1303139A-06A/AA | TO-15 | 3-Chloropropene | **139**/116 | 18 | 70-130/25 |
| 1303139A-06A/AA | TO-15 | 4-Methyl-2-pentanone | **136**/129 | 5 | 70-130/25 |
| 1303139A-06A/AA | TO-15 | alpha-Chlorotoluene | **132**/123 | 7 | 70-130/25 |

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. No qualification of data was required.

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| EXH-SVE-03012013 | TO-3 | Fluorobenzene | **165** | 75-150 |
| Main Header-SVE-03012013 | TO-3 | Fluorobenzene | **226** | 75-150 |

Analytical data that required qualification based on surrogate data are included in the table below.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| EXH-SVE-03012013 | TO-3 | TPH (C2-C10) ref. to gasoline | **J** |
| Main Header-SVE-03012013 | TO-3 | TPH (C2-C10) ref. to gasoline | **J** |

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples due to the inability to spike the samples in summa canisters.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

No

Project Name: Roxana SVE O&M
Project #: 21562850.05000
Workorder #: 1303139A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 3/7/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1303139A**

Three 1 Liter Summa Canister samples were received on March 07, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Dilution was performed on all of the samples due to the presence of high level target species.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.

UJ- Non-detected compound associated with low bias in the CCV and/or LCS.

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Project Name: Roxana SVE O&M
Project #: 21562850.05000
Workorder #: 1303139B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 3/7/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1945 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1303139B**

Three 1 Liter Summa Canister samples were received on March 07, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Samples EXH-SVE-03012013, MainHeader-SVE-03012013 and PWHeader-SVE-03012013 were analyzed past the project specified 14-day hold time, but within the method required 30-day hold time.

The reported Samples for each daily batch may be derived from more than one analytical file.
The reporting limit for Nitrogen was raised from 0.10% to 0.50%.

The associated comprehensive validation package provided at a later date shows the time of analysis in GMT in the raw data files. Due to software limitations the time can not be adjusted however, the time on the final PDF and EDD reports is provided in PST.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Roxana SVE O&M
Project #: 21562850.05000
Workorder #: 1303139C

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 3/7/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-3 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner
Project Manager

**LABORATORY NARRATIVE**
**Modified TO-3**
**URS Corporation**
**Workorder# 1303139C**

Three 1 Liter Summa Canister samples were received on March 07, 2013. The laboratory performed analysis for volatile organic compounds in air via modified EPA Method TO-3 using gas chromatography with flame ionization detection. The TPH results are calculated using the response of Gasoline. A molecular weight of 100 is used to convert the TPH ppmv result to ug/L. The method involves concentrating up to 200 mL of sample. The concentrated aliquot is then dry purged to remove water vapor prior to entering the chromatographic system.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *TO-3* | *ATL Modifications* |
|---|---|---|
| Daily Calibration Standard Frequency | Prior to sample analysis and every 4 - 6 hrs | Prior to sample analysis and after the analytical batch </= 20 samples. |
| Initial Calibration Calculation | 4-point calibration using a linear regression model | 5-point calibration using avcrage Response Factor |
| Initial Calibration Frequency | Weekly | When daily calibration standard recovery is outside 75 - 125 %, or upon significant changes to procedure or instrumentation |
| Moisture Control | Nafion system | Sorbent system |
| Minimum Detection Limit (MDL) | Calculated using the equation DL = A+3.3S, where A is intercept of calibration line and S is the standard deviation of at least 3 reps of low level standard | 40 CFR Pt. 136 App. B |
| Preparation of Standards | Levels aehieved through dilution of gas mixture | Levels achieved through loading various volumes of the gas mixture |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The recovery of surrogate Fluorobenzene in samples EXH-SVE-03012013 and MainHeader-SVE-03012013 was outside control limits due to high level hydrocarbon matrix interference. Data is reported as qualified.

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations

that are below the level at which the canister was certified may be false positives.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

| VMP-25-31-030613 | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated sample VMP-25-21-030613 was diluted and re-analyzed to bring the highest level target analytes within the calibration range of the instrument. Results for the highest level target analytes were reported from the re-analysis diluted runs and the remaining compounds were reported from the original analyses. Sample VMP-25-31-030613 was diluted due to high levels of target analytes. TO-15 LCS/LCSD recoveries and one LCS/LCSD RPD were outside evaluation criteria. CCV recovery for 2,2,4-trimethylpentane was outside evaluation criteria. Although not indicated in the laboratory case narrative, analytes were detected in the method blank. These issues are addressed further in the appropriate sections below.

No issues or discrepancies were noted in the cooler receipt form.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/ Amount |
|---|---|---|---|
| 1303140A-04A | TO-15 | Carbon disulfide | 0.44 ppbv / 1.4 µg/m$^3$ |

| 1303140A-04A | TO-15 | Hexachlorobutadiene | 0.36 ppbv / 3.8 µg/m$^3$ |
| 1303140A-04B | TO-15 | Ethanol | 8.9 ppbv / 17 µg/m$^3$ |
| 1303140A-04B | TO-15 | Methylene chloride | 1.5 ppbv / 5.1 µg/m$^3$ |
| 1303140B-04A | Natural gases | Oxygen | 0.016% |
| 1303140B-04A | Natural gases | Nitrogen | 0.098% |
| 1303140B-04C | Natural gases | Methane | 0.000032 |

Qualifications due to blank contamination are included in the following table. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| VMP-25-5-030613 | TO-15 | Carbon disulfide | - | **U** |
| VMP-25-5-030613 | TO-15 | Methylene chloride | - | **U** |
| VMP-25-5-030613 | TO-15 | trans-1,3-Dichloropropene | - | **U** |
| VMP-25-5-030613 | TO-15 | Tetrachloroethene | - | **U** |
| VMP-25-5-030613 | TO-15 | Chlorobenzene | - | **U** |
| VMP-25-5-030613 | TO-15 | 1,3-Dichlorobenzene | - | **U** |
| VMP-25-5-030613 | TO-15 | 1,4-Dichlorobenzene | - | **U** |
| VMP-25-5-030613 | TO-15 | alpha-Chlorotoluene | - | **U** |
| VMP-25-5-030613 | TO-15 | 1,2-Dichlorobenzene | - | **U** |
| VMP-25-5-030613 | TO-15 | 1,2,4-Trichlorobenzene | - | **U** |

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1303140A-06A/AA | TO-15 | Cyclohexane | **155**/116 | **29** | 70-130/25 |
| 1303140A-06A/AA | TO-15 | 2,2,4-Trimethylpentane | **131**/105 | 22 | 70-130/25 |
| 1303140A-06A/AA | TO-15 | 1,1,2,2-Tetrachloroethane | **65/**70 | 7 | 70-130/25 |

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | LCS/ LCSD RPD | LCS/LCSD /RPD Criteria |
|---|---|---|---|---|---|
| 1303140A-06A/AA | TO-15 | cis-1,2-Dichloroethene | 112/**132** | 16 | 70-130/25 |

Analytical data that required qualification based on LCS data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-25-5-030613 | TO-15 | Cyclohexane | **J** |
| VMP-25-5-030613 | TO-15 | 2,2,4-Trimethylpentane | **J** |
| VMP-25-5-030613 | TO-15 | 1,1,2,2-Tetrachloroethane | **UJ** |
| VMP-25-21-030613 | TO-15 | Cyclohexane | **J** |
| VMP-25-21-030613 | TO-15 | 2,2,4-Trimethylpentane | **J** |
| VMP-25-21-030613 | TO-15 | 1,1,2,2-Tetrachloroethane | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

Yes

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

MS/MSD samples are not applicable for vapor samples, due to the inability to spike the samples.

## 8.0 Laboratory Duplicate Results

*Were laboratory duplicate samples collected as part of this SDG?*

No

## 9.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 10.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted.

## 11.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, continuing calibration verification (CCV) recoveries listed in the following table were above evaluation criteria.

| CCV ID | Parameter | Analyte | CCV Recovery | CCV Criteria |
|---|---|---|---|---|
| 1303140A-05A | TO-15 | 2,2,4-Trimethylpentane | **136** | 70-130 |

Analytical data that required qualification based on CCV data are included in the table below. Analytical data reported as non-detect and associated with CCV recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

| Field ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| VMP-25-5-030613 | TO-15 | 2,2,4-Trimethylpentane | **J** |
| VMP-25-21-030613 | TO-15 | 2,2,4-Trimethylpentane | **J** |

Workorder #: 1303140A

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 3/7/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**EPA Method TO-15**
**URS Corporation**
**Workorder# 1303140A**

Three 1 Liter Summa Canister samples were received on March 07, 2013. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Due to high-level target compounds, sample VMP-25-21-030613 was analyzed twice. In the "A" fraction, the sample was diluted to bring the highest-level compounds within the calibration range. The "B" fraction is also reported by client request and may be reported with "E" flags indicating the compound exceeds the calibration range. Both runs and associated QC are reported.

Dilution was performed on sample VMP-25-31-030613 due to the presence of high level target species.

The recovery of 155% for Cyclohexane in the LCS was outside method and laboratory acceptance criteria and the RPD of 29% between the LCS and LCSD was also outside the method criteria of 25% RPD. Associated Cyclohexane detections from the analytical batch performed on instrument MSD-P were flagged as estimated values.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV and/or LCS.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

3/27/2013
Ms. Elizabeth Kunkel
URS Corporation
1001 Highlands Plaza Dr. West
Suite 300
St. Louis MO 63110

Project Name: Roxana Soil Vapor
Project #: 21562850.04001
Workorder #: 1303140B

Dear Ms. Elizabeth Kunkel

The following report includes the data for the above referenced project for sample(s) received on 3/7/2013 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

**LABORATORY NARRATIVE**
**Modified ASTM D-1946**
**URS Corporation**
**Workorder# 1303140B**

Three 1 Liter Summa Canister samples were received on March 07, 2013. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

On the analytical column employed for this analysis, Oxygen coelutes with Argon. The corresponding peak is quantitated as Oxygen.

Since Nitrogen is used to pressurize samples, the reported Nitrogen values are calculated by adding all the sample components and subtracting from 100%.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| *Requirement* | *ASTM D-1946* | *ATL Modifications* |
|---|---|---|
| Calibration | A single point calibration is performed using a reference standard closely matching the composition of the unknown. | A 3-point calibration curve is performed. Quantitation is based on a daily calibration standard which may or may not resemble the composition of the associated samples. |
| Reference Standard | The composition of any reference standard must be known to within 0.01 mol % for any component. | The standards used by ATL are blended to a >/= 95% accuracy. |
| Sample Injection Volume | Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL. | The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum. |
| Normalization | Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%. | Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix. |
| Precision | Precision requirements established at each concentration level. | Duplicates should agree within 25% RPD for detections > 5 X's the RL. |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

The associated comprehensive validation package provided at a later date shows the time of analysis in GMT in the raw data files. Due to software limitations the time can not be adjusted however, the time on the final PDF and EDD reports is provided in PST.

The reported Samples for each daily batch may be derived from more than one analytical file.
The reporting limit for Nitrogen was raised from 0.10% to 0.50%.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue
