| MW7-ROX-011724-DUP | - |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes, the laboratory case narrative indicated that the container label for the sample MW14-ROX-011724 did not match the information listed on the Chain-of-Custody (COC). The container labels listed MW14-ROX-011724, while the COC listed MW25-ROX-011724. The container labels were correctly used to log and report data; no qualification of data was required.

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the results for benzene in field duplicate pair MW7-ROX-011724/MW7-ROX-011724-DUP were qualified as estimated **(J/J)** due to field duplicate RPD above evaluation criteria. VOCs in field duplicate pair MW7-ROX-011724/MW7-ROX-011724-DUP were diluted to bring target analytes into calibration range of the instrument. The initial calibration verification (ICV) for 3,3'-dichlorobenzidine was outside evaluation criteria, biased low. The continuing calibration verification (CCV) for several analytes were outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| MB 400-658257/1-A | PAHs | Terphenyl-$d_{14}$ | **162** | 18-147 |
| MW4-ROX-011724-EB | PAHs | Terphenyl-$d_{14}$ | **156** | 18-147 |

Method blanks and equipment blanks are quality control samples and do not require qualification. No qualification of data was required.

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

No

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

Yes

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples analyzed as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

Yes

| Field ID | Field Duplicate ID |
|---|---|
| MW7-ROX-011724 | MW7-ROX-011724-DUP |

*Were field duplicates within evaluation criteria?*

No

| Field ID | Field Duplicate ID | Parameter | Analyte | RPD | Qualification |
|---|---|---|---|---|---|
| MW7-ROX-011724 | MW7-ROX-011724-DUP | VOCs | Benzene | **38** | **J/J** |

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution with the exception of non-detect VOCs in field duplicate pair MW7-ROX-011724/MW7-ROX-011724-DUP to bring

benzene into calibration range of the instrument. VOCs were non-detect at a dilution factor of 2000X, with raised reporting limits of between 2,000 and 50,000 µg/L. Due to historical detections, please see section 12.0 of the data review for additional qualifications.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, the initial calibration verification (ICV) for 3,3'-dichlorobenzidine was outside evaluation criteria, biased low. The continuing calibration verifications (CCV) for methylene chloride, acrylonitrile, chloroethane, pyridine, and 4,6-dinitro-ortho-cresol were outside evaluation criteria, biased low. Methylene chloride, acrylonitrile, and chloroethane in field duplicate pair MW7-ROX-011724/MW7-ROX-011724-DUP were previously qualified in Section 11.0 of this data review due to a sample dilution; no further qualification is required. Analytes are qualified as summarized in the following table.

**Job Narrative**
**400-249894-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**
The samples were received on 1/20/2024 11:07 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C

**Receipt Exceptions**
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): MW14-ROX-011724 (400-249894-5). The container labels list MW14-ROX-011724, while the COC lists MW25-ROX-011724.

**GC/MS VOA**
Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW7-ROX-011724 (400-249894-6) and MW7-ROX-011724-DUP (400-249894-7). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-658371 recovered outside acceptance criteria, low biased, for Chloroethane, Acrylonitrile, Trichlorofluoromethane and Methylene Chloride. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: MW4-ROX-011724 (400-249894-4), MW14-ROX-011724 (400-249894-5), MW7-ROX-011724 (400-249894-6) and MW7-ROX-011724-DUP (400-249894-7). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-011724-8260 (400-249894-1) and MW4-ROX-011724-EB (400-249894-3). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW7-ROX-011724 (400-249894-6) and MW7-ROX-011724-DUP (400-249894-7). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC/MS Semi VOA**
Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-654856 was outside method criteria for the following analyte(s): 3,3'-Dichlorobenzidine, 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-658299 recovered outside acceptance criteria, low biased, for 4,6-Dinitro-2-methylphenol and Pyridine. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_SIM: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: MW4-ROX-011724-EB (400-249894-3) and (MB 400-658257/1-A). These results have been

reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC Semi VOA**
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

My apologies Leah, MW-14 is the correct ID for the sample collected 1/17. It originally would've been MW-25 had that well not been encased in ice at the time, hence the mix-up.

I've attached the corrected COC.

Thanks so much,

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the PAH surrogate recovery for terphenyl-$d_{14}$ and VOC by 8011 surrogate recovery for 4-bromofluorobenzene in several method blanks were outside criteria. The continuing calibration verification (CCV) for several analytes were outside evaluation criteria, biased low. The initial calibration verification (ICV) for 3,3'-dichlorobenzidine was outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

Yes

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| MB 400-658257/1-A | PAHs | Terphenyl-$d_{14}$ | **162** | 18-147 |
| MB 400-658842/1-A | VOCs by 8011 | 4-Bromofluorobenzene | **156** | 51-149 |

Qualifications due to surrogate recoveries were not required if only one of three base/neutral surrogate recoveries were outside evaluation criteria. Method blanks are quality control samples and do not require qualification.

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

No

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

Yes

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples analyzed as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, the continuing calibration verification (CCV) for methylene chloride, acrylonitrile, chloroethane, pyridine and 4,6-dinitro-ortho-cresol were outside evaluation criteria, biased low. The initial calibration verification (ICV) for 3,3'-dichlorobenzidine was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |

**Job Narrative**
**400-249896-1**

**Receipt**
The samples were received on 1/20/2024 11:07 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.0º C.

**GC/MS VOA**
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-658524 recovered above the upper control limit for Hexachlorobutadiene, 1,2,4-Trichlorobenzene, 4-Isopropyltoluene, sec-Butylbenzene and Bromobenzene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-658524 recovered outside acceptance criteria, low biased, for Chloroethane, Acrylonitrile and Methylene Chloride. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-011824-8260 (400-249896-1) and MW25-ROX-011824 (400-249896-3). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-658524 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-658524 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC/MS Semi VOA**
Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-654856 was outside method criteria for the following analyte(s): 3,3'-Dichlorobenzidine, 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-658299 recovered outside acceptance criteria, low biased, for 4,6-Dinitro-2-methylphenol and Pyridine. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-658308 recovered above the upper control limit for Pyrene, Benzo[b]fluoranthene and Benzo[k]fluoranthene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 400-658257/1-A). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC Semi VOA**
Method 8011: The surrogate recovery for the blank associated with preparation batch 400-658842 and analytical batch 400-658857 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**Organic Prep**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated that PAHs were re-extracted outside extraction time criteria in samples MW1-ROX-112723, MW11-ROX-112723, MW27-ROX-112723, MW10-ROX-112723 and MW28-ROX-112723, and in equipment blanks MW1-ROX-112723-EB and MW9-ROX-112723-EB. Multiple analytes were detected in equipment blanks MW1-ROX-112723-EB and MW9-ROX-112723-EB. SVOC LCS/LCSD recoveries, and/or SVOC LCS/LCSD RPDs, were outside evaluation criteria. Several VOC MS/MSD recoveries were outside evaluation criteria in samples MW11-ROX-112723 and MW10-ROX-112723. The continuing calibration verifications (CCV) for several analytes were outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review. The laboratory report was revised on December 31, 2023, to include missing QC that had inadvertently been omitted by the laboratory.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in samples MW1-ROX-112723, MW11-ROX-112723, MW27-ROX-112723, MW10-ROX-112723, and MW28-ROX-112723, and in equipment blanks MW1-ROX-

112723-EB and MW9-ROX-112723-EB, were re-extracted 2 days outside extraction holding time criteria (7 days) and then re-analyzed for confirmation. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported. Results for the re-extracted and re-analyzed sample MW1-ROX-112723 were comparable to the initial results. Based on professional judgement, the results from the initial analysis were used for the purposes of this report. Equipment blanks are quality control samples and do not require qualification.

With regard to initial MW10-ROX-112723, MW11-ROX-112723, MW27-ROX-112723, and MW28-ROX-112723 PAH data, the laboratory previously issued a Corrective Action Report (CAR) stating that through confirmation analyses, many previous detections were not confirmed and were therefore deemed laboratory contamination. Based on professional judgement, the results from the re-analysis were used for the purposes of this report. Data requiring qualification is summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW10-ROX-112723 RERA | PAHs | All non-detects | **UJ** |
| MW10-ROX-112723 RERA | PAHs | Benzo[b]fluoranthene | **J** |
| MW28-ROX-112723 RERA | PAHs | All non-detects | **UJ** |
| MW11-ROX-112723 RERA | PAHs | All non-detects | **UJ** |
| MW27-ROX-112723 RERA | PAHs | All non-detects | **UJ** |

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

| Blank ID | Parameter | Analyte | Concentration /Amount |
|---|---|---|---|
| MW1-ROX-112723-EB | PAHs | Acenaphthylene | 0.077 µg/L |
| MW1-ROX-112723-EB | PAHs | Benzo[b]fluoranthene | 0.046 µg/L |
| MW1-ROX-112723-EB | PAHs | Dibenz(a,h)anthracene | 0.054 µg/L |
| MW1-ROX-112723-EB | PAHs | Indeno[1,2,3-cd]pyrene | 0.065 µg/L |
| MW1-ROX-112723-EB RERA | PAHs | Benzo[b]fluoranthene | 0.11 µg/L |
| MW1-ROX-112723-EB RERA | PAHs | Indeno[1,2,3-cd]pyrene | 0.072 µg/L |
| MW1-ROX-112723-EB | SVOCs | Diethyl phthalate | 0.70 µg/L |
| MW9-ROX-112723-EB | PAHs | Indeno[1,2,3-cd]pyrene | 0.062 µg/L |

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

| Sample ID | Parameter | Analyte | New Reporting Limit (RL) | Qualification |
|---|---|---|---|---|
| MW1-ROX-112723 | PAHs | Acenaphthylene | - | **U** |
| MW1-ROX-112723 | PAHs | Benzo[b]fluoranthene | - | **U** |
| MW1-ROX-112723 | PAHs | Indeno[1,2,3-cd]pyrene | - | **U** |
| MW1-ROX-112723 | SVOCs | Diethyl phthalate | - | **U** |

Analytical data that required qualification based on MS/MSD data are included in the table below. Professional judgement was used to qualify; however, not reject 2-chloroethyl vinyl ether due to acceptable LCS recoveries and to the acid reactive nature of 2-chloroethyl vinyl ether. Analytical data reported as non-detect and associated with MS/MSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Analytical data associated with MS/MSD RPD alone outside evaluation criteria did not require qualification.

REVISION
The report being provided is a revision of the original report sent on 12/14/2023. The report (revision 1) is being revised to include missing QC.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**
The samples were received on 11/28/2023 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 0.0°C

**GC/MS VOA**
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-652440 recovered outside acceptance criteria, low biased, for Acrolein, Chloroethane, Trichlorofluoromethane and Vinyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-112723-8260-A (400-247369-1), MW1-ROX-112723-EB (400-247369-3), MW1-ROX-112723 (400-247369-4), MW26-ROX-112723 (400-247369-5), MW11-ROX-112723 (400-247369-6), MW27-ROX-112723 (400-247369-7), TB-ROX-112723-8260-B (400-247369-8), MW9-ROX-112723-EB (400-247369-10), MW9-ROX-112723 (400-247369-11), MW10-ROX-112723 (400-247369-12) and MW28-ROX-112723 (400-247369-13). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-652440 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 400-652440 was outside control limits. Sample matrix interference is suspected.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-652440 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-652440 because the recoveries were below the reporting limit due to the acidic nature of the parent sample..

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-633903 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC/MS Semi VOA**
Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-650079 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-652297 and analytical batch 400-652457 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The laboratory control sample (LCS) for preparation batch 400-652297 and analytical batch 400-652457 recovered outside control limits for the following analyte(s): Hexachlorocyclopentadiene. Hexachlorocyclopentadiene has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-652297 and analytical batch 400-652457 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-652457 recovered above the upper control limit for Di-n-butyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-652457 recovered outside acceptance criteria, low biased, for Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: MW26-ROX-112723 (400-247369-5), MW11-ROX-112723 (400-247369-6), MW11-ROX-112723 (400-247369-6[MS]), MW27-ROX-112723 (400-247369-7), MW9-ROX-112723 (400-247369-11) and MW10-ROX-112723 (400-247369-12). These results have been reported and qualified.

Method 8270E_SIM: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: MW1-ROX-112723-EB (400-247369-3), MW11-ROX-112723 (400-247369-6), MW27-ROX-112723 (400-247369-7), MW10-ROX-112723 (400-247369-12) and MW28-ROX-112723 (400-247369-13). These results have been reported and qualified.

Method 8270E_SIM: The following samples were re-prepared outside of preparation holding time due to verification of sample results needed: MW1-ROX-112723-EB (400-247369-3), MW1-ROX-112723 (400-247369-4), MW11-ROX-112723 (400-247369-6), MW27-ROX-112723 (400-247369-7), MW9-ROX-112723-EB (400-247369-10), MW10-ROX-112723 (400-247369-12) and MW28-ROX-112723 (400-247369-13). Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC Semi VOA**

Method 8011: The continuing calibration verification (CCV) associated with batch 400-652129 recovered above the upper control limit for 1,2-Dibromo-3-Chloropropane and 1,2-Dibromoethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: (CCV 400-652100/24-A) and (CCV 400-652100/25-A).

Method 8011: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 400-652100 and analytical batch 400-652129 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8011: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-652100 and analytical batch 400-652129 recovered outside control limits for the following analytes: 1,2-Dibromo-3-Chloropropane.

Method 8011: The continuing calibration verification (CCV) associated with batch 400-652266 recovered above the upper control limit for 1,2-Dibromoethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data

have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the case narrative stated that PAHs in samples ROST3MW-ROX-112823, P54-ROX-112823, MW24-ROX-112823, and MW5-ROX-112823 were re-extracted outside extraction time criteria. SVOC and VOCs LCS/LCSD recoveries were outside evaluation criteria. Several VOC MS/MSD recoveries were outside evaluation criteria in sample P54-ROX-112823. The continuing calibration verification (CCV) for 1,1,2,2-tetrachloroethane and chloroethane were outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in samples ROST3MW-ROX-112823, P54-ROX-112823, MW24-ROX-112823, and MW5-ROX-112823 were re-extracted 7 days outside of extraction time criteria (7 days) and then re-analyzed for confirmation. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported.

With regard to initial ROST3MW-ROX-112823, MW24-ROX-112823, MW5-ROX-112823, and P54-ROX-112823 PAH data, the laboratory previously issued a Corrective Action Report (CAR) stating that through confirmation analyses, many previous detections were not confirmed and were therefore deemed laboratory contamination. Based on professional judgement, the results from the re-analysis were used for the

purposes of this report. Data requiring qualification is summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| ROST3MW-ROX-112823-RERA | PAHs | All non-detects | **UJ** |
| ROST3MW-ROX-112823-RERA | PAHs | 1-Methylnaphthalene | **J** |
| P54-ROX-112823-RERA | PAHs | All non-detects | **UJ** |
| P54-ROX-112823-RERA | PAHs | Fluoranthene | **J** |
| MW24-ROX-112823-RERA | PAHs | All non-detects | **UJ** |
| MW5-ROX-112823-RERA | PAHs | All non-detects | **UJ** |

Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Professional judgment was used to qualify, however not reject, data associated with benzenethiol and hexachlorocyclopentadiene below evaluation criteria; benzenethiol and hexachlorocyclopentadiene have been identified as a poor performing analytes under Method 8270.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| ROST3MW-ROX-112823 | SVOCs | Benzenethiol | **UJ** |

**GC/MS VOA**
Method 8260D: The laboratory control sample (LCS) for analytical batch 400-652468 recovered outside control limits for the following analytes: 1,2-Dichloropropane, 2-Butanone (MEK), Acetone, Dibromomethane, Dichlorobromomethane, Tetrachloroethene and Trichloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-652468 recovered above the upper control limit for 1,2-Dichloroethane, 1,2-Dichloropropane, 2-Butanone (MEK), Acetone, Carbon tetrachloride, cis-1,3-Dichloropropene, Dibromomethane, Dichlorobromomethane, Hexachlorobutadiene, Tetrachloroethene and Trichloroethene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-652468 recovered outside acceptance criteria, low biased, for 1,1,2,2-Tetrachloroethane and Chloroethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-652468 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-652468 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-652468 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-112823-8260-A (400-247408-1), ROST3MW-ROX-112823 (400-247408-3), P54-ROX-112823 (400-247408-4), MW24-ROX-112823 (400-247408-5), MW5-ROX-112823 (400-247408-6) and MW5-ROX-112823-DUP (400-247408-7). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-627009 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC/MS Semi VOA**
Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-650079 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-652297 and analytical batch 400-652457 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

## Job ID: 400-247408-1 (Continued)

### Laboratory: Eurofins Pensacola (Continued)

Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-652297 and analytical batch 400-652457 recovered outside control limits for the following analyte(s): Hexachlorocyclopentadiene. Hexachlorocyclopentadiene has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-652774 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-654224 recovered above the upper control limit for Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene and Dibenz(a,h)anthracene. The samples associated with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: The following samples were re-prepared outside of preparation holding time to confirm sample results: ROST3MW-ROX-112823 (400-247408-3), P54-ROX-112823 (400-247408-4), MW24-ROX-112823 (400-247408-5) and MW5-ROX-112823 (400-247408-6). Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC Semi VOA**

Method 8011: The continuing calibration verification (CCV) associated with batch 400-652266 recovered above the upper control limit for 1,2-Dibromoethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**Date Reviewed: 1/4/2024**

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the case narrative indicated that PAHs in samples ROST4PZG-ROX-112823, ROST4PZC-ROX-112823, and MW3-ROX-112823 were re-extracted outside extraction time criteria. SVOC and VOCs LCS/LCSD recoveries were outside evaluation criteria. The continuing calibration verification (CCV) for multiple analytes were outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review. The laboratory report was revised on January 5, 2024, to include missing ICVs for method 8270E SIM.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in samples ROST4PZG-ROX-112823, ROST4PZC-ROX-112823, and MW3-ROX-112823 were re-extracted 7 days outside of extraction time criteria (7 days) and then re-analyzed for confirmation. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported.

The results for the re-extracted and re-analyzed sample ROST4PZC-ROX-112823 were comparable to the initial results; both sets of data are reported. Based on professional judgement, the results from the initial analysis were used for the purposes of this report.

With regard to initial ROST4PZG-ROX-112823 and MW3-ROX-112823 PAH data, the laboratory previously issued a Corrective Action Report (CAR) stating that through confirmation analyses many previous detections were not confirmed and were therefore

deemed laboratory contamination. Based on professional judgement, the results from the re-analysis were used for the purposes of this report. Data requiring qualification is summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| ROST4PZG-ROX-112823—RERA | PAHs | All non-detects | **UJ** |
| MW3-ROX-112823—RERA | PAHs | All non-detects | **UJ** |

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD/ RPD Criteria |
|---|---|---|---|---|---|
| LCS 400-652468/1001 | VOCs | Acetone | **219** | NA | 43-160 |
| LCS 400-652468/1001 | VOCs | Bromodichloromethane | **137** | NA | 67-133 |
| LCS 400-652468/1001 | VOCs | 2-Butanone (MEK) | **167** | NA | 61-145 |
| LCS 400-652468/1001 | VOCs | 1,2-Dichloropropane | **135** | NA | 70-130 |
| LCS 400-652468/1001 | VOCs | Methylene bromide | **136** | NA | 70-130 |
| LCS 400-652468/1001 | VOCs | Tetrachloroethene | **159** | NA | 65-130 |
| LCS 400-652468/1001 | VOCs | Trichloroethene | **138** | NA | 70-130 |
| LCS 400-652297/2-A | SVOCs | Hexachlorocyclopentadiene | **7** | NA | 10-134 |
| LCS/LCSD 400-652297/3-A/4-A | SVOCs | Benzenethiol | **5/5** | 1 | 10-120/30 |

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Analytical data reported as non-detect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Professional judgment was used to qualify, however not reject, data associated with benzenethiol and hexachlorocyclopentadiene below evaluation criteria; benzenethiol and hexachlorocyclopentadiene have been identified as a poor performing analyte under Method 8270.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| ROST4PZG-ROX-112823 | SVOCs | Benzenethiol | **UJ** |
| ROST4PZG-ROX-112823 | SVOCs | Hexachlorocyclopentadiene | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| MW3-ROX-112823 | SVOCs | Terphenyl-$d_{14}$ | **43** | 44-149 |

Qualifications due to surrogate recoveries were not required if only one of three base/neutral and/or acid surrogate recoveries were outside evaluation criteria. No qualification of data was required.

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

No

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

Yes

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples analyzed as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, the continuing calibration verifications (CCV) for 1,1,2,2-tetrachloroethane and chloroethane were outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| ROST4PZC-ROX-112823 | VOCs | 1,1,2,2-Tetrachloroethane | **UJ** |

**GC/MS VOA**
Method 8260D: The laboratory control sample (LCS) for analytical batch 400-652468 recovered outside control limits for the following analytes: 1,2-Dichloropropane, 2-Butanone (MEK), Acetone, Dibromomethane, Dichlorobromomethane, Tetrachloroethene and Trichloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-652468 recovered above the upper control limit for 1,2-Dichloroethane, 1,2-Dichloropropane, 2-Butanone (MEK), Acetone, Carbon tetrachloride, cis-1,3-Dichloropropene, Dibromomethane, Dichlorobromomethane, Hexachlorobutadiene, Tetrachloroethene and Trichloroethene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-112823-8260-B (400-247410-1), ROST4PZC-ROX-112823 (400-247410-4), MW16-ROX-112823 (400-247410-5) and MW3-ROX-112823 (400-247410-6). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-627009 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: ROST4PZG-ROX-112823 (400-247410-3). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-633903 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-652468 recovered outside acceptance criteria, low biased, for 1,1,2,2-Tetrachloroethane and Chloroethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC/MS Semi VOA**
Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-650079 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-652297 and analytical batch 400-652457 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has

been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-652297 and analytical batch 400-652457 recovered outside control limits for the following analyte(s): Hexachlorocyclopentadiene. Hexachlorocyclopentadiene has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-652774 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-654224 recovered above the upper control limit for Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene and Dibenz(a,h)anthracene. The samples associated with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: The following samples were re-prepared outside of preparation holding time to confirm sample results: ROST4PZG-ROX-112823 (400-247410-3), ROST4PZC-ROX-112823 (400-247410-4) and MW3-ROX-112823 (400-247410-6). Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC Semi VOA**

Method 8011: The continuing calibration verification (CCV) associated with batch 400-652266 recovered above the upper control limit for 1,2-Dibromoethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated PAHs were re-extracted outside extraction time criteria in samples MW12-ROX-112923, MW13-ROX-112923, and P114R-ROX-112923. SVOCs in sample MW13-ROX-112923 were also re-extracted outside of the extraction time criteria. Several SVOC LCS/LCSD recoveries, and/or SVOC LCS/LCSD RPDs, were outside evaluation criteria. Several SVOC surrogate recoveries were outside criteria in several investigative and quality control samples. Several VOC MS/MSD recoveries were outside evaluation criteria in sample MW12-ROX-112923. The continuing calibration verification (CCV) for several analytes was outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in samples MW12-ROX-112923, MW13-ROX-112923, and P114R-ROX-112923 were re-extracted 7 days outside of extraction time criteria (7 days) for confirmation; the samples were re-extracted out of hold time and the results were non-detect. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported.

The results for the re-extracted and re-analyzed sample P114R-ROX-112923 were

comparable to the initial results; both sets of data are reported. Based on professional judgement, the results from the initial analysis were used for the purposes of this report.

With regard to initial MW12-ROX-112923 and MW13-ROX-112923 PAH data, the laboratory previously issued a Corrective Action Report (CAR) stating that through confirmation analyses, many previous detections were not confirmed and were therefore deemed laboratory contamination. Based on professional judgement, the results from the re-analysis were used for the purposes of this report.

SVOCs in sample MW13-ROX-112923 were re-extracted 7 days outside of extraction time criteria (7 days) due to initial failing basic surrogate recoveries. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported. Therefore, using professional judgement, basic SVOCs in sample MW13-ROX-112923 were reported from the secondary run due to failing basic surrogate recoveries in the initial run. Acid SVOCs in sample MW13-ROX-112923 were reported from the initial run due to extraction time exceedance in the re-extracted secondary run.

Data requiring qualification is summarized in the following table.

| LCS/LCD 400-653912/2-A/3-A | SVOCs | 2,4,6-Trichlorophenol | 86/58 | **41** | 50-127/30 |

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Professional judgment was used to qualify, however not reject, data associated with benzenethiol below evaluation criteria; benzenethiol have been identified as a poor performing analyte under Method 8270. Analytical data associated with LCS/LCSD RPD alone outside evaluation criteria did not require qualification. Basic SVOC analytes in sample MW13-ROX-112923 have been qualified due to hold time exceedances in Section 3.0 of this data review; no further qualification is needed. Acid SVOC analytes in sample MW13-ROX-112923 were reported from the initial run due to extraction time exceedance in the re-extracted secondary run.

| P114R-ROX-112923 | SVOCs | Benzenethiol | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| MW13-ROX-112923 | SVOCs | 2-Fluorobiphenyl | **45** | 46-124 |
| MW13-ROX-112923 | SVOCs | Nitrobenzene-$d_5$ | **34** | 36-126 |

| MB 400-652972/1-A | PAHs | Terphenyl-$d_{14}$ | **158** | 18-147 |

Qualifications due to surrogate recoveries were not required if only one of three base/neutral and/or acid surrogate recoveries were outside evaluation criteria. Method blanks are quality control samples and do not require qualification. Basic SVOCs in sample MW13-ROX-112923 were reported from the re-extracted secondary run due to non-detect data in the initial run; qualifications due to extraction time criteria were reported in Section 3.0 of this data review. No qualification of data was required.

| MW12-ROX-112923 MS/MSD | VOCs | 2-Hexanone | **53/64** | 18 | 65-140/30 |

Analytical data that required qualification based on MS/MSD data are included in the table below. Professional judgement was used to qualify; however, not reject 2-chloroethyl vinyl ether due to acceptable LCS recoveries and to the acid reactive nature of 2-chloroethyl vinyl ether.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW12-ROX-112923 | VOCs | Acetone | **UJ** |

**Job Narrative**
**400-247491-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**
The samples were received on 11/30/2023 9:28 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C

**GC/MS VOA**
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-652698 recovered outside acceptance criteria, low biased, for Chloroethane and Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-652698 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-652698 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-652698 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-112923-8260 (400-247491-1), MW-12-ROX-112923 (400-247491-3), MW-13-ROX-112923 (400-247491-4) and P114R-ROX-112923 (400-247491-5). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-633903 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC/MS Semi VOA**
Method 8270E: The laboratory control sample (LCS) for preparation batch 400-652972 and analytical batch 400-653218 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-652972 and analytical batch 400-653218 recovered outside control limits for the following analytes: Benzenethiol.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: P114R-ROX-112923 (400-247491-5). These results have been reported and qualified.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-652774 was outside method criteria for the following

analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Surrogate recovery for the following sample was outside control limits: MW-13-ROX-112923 (400-247491-4). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data have been reported.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 400-653912/1-A). These results have been reported and qualified.

Method 8270E: The laboratory control sample duplicate (/LCSD) for preparation batch 400-653912 and analytical batch 400-654464 recovered outside control limits for the following analyte(s): Hexachlorocyclopentadiene. Hexachlorocyclopentadiene has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The following analyte(s) recovered outside control limits for the LCSD associated with preparation batch 400-653912 and analytical batch 400-654464: 2,4-Dichlorophenol, 2-Chlorophenol and 2-Nitrophenol. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-653912 and analytical batch 400-654464 recovered outside control limits for the following analytes: 2,4-Dinitrophenol, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, Quinoline, Phenol, 4-Chloro-3-methylphenol, Benzoic acid, 2-Methylphenol, 3 & 4 Methylphenol, Pentachlorophenol, Hexachlorocyclopentadiene, 2,4-Dichlorophenol, 2-Chlorophenol and 2-Nitrophenol.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-653222 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-653195 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following sample: P114R-ROX-112923 (400-247491-5).

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654224 recovered above the upper control limit for Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene and Dibenz(a,h)anthracene. The samples associated with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654319 recovered above the upper control limit for Benzo[a]anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654319 recovered outside acceptance criteria, low biased, for Benzo[g,h,i]perylene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_SIM: The following samples were re-prepared outside of preparation holding time for confirmation: MW-12-ROX-112923 (400-247491-3), MW-13-ROX-112923 (400-247491-4) and P114R-ROX-112923 (400-247491-5). Both sets of data are reported.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654774 recovered above the upper control limit for Benzo[a]anthracene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC Semi VOA**

# Roxana Groundwater Monthly – November/December 2023 Data Review

**Data Reviewer: Adelina Gita**

| MW23-ROX-112923 | |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the case narrative stated that PAHs in sample MW23-ROX-112923 were re-extracted outside extraction time criteria. LCS/LCSD recoveries and LCS/LCSD RPD for benzenethiol were outside evaluation criteria. The surrogate recovery for terphenyl-$d_{14}$ was outside criteria in a PAH method blank. The continuing calibration verification (CCV) for benzo[g,h,i]perylene was outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in sample MW23-ROX-112923 were re-extracted 7 days outside of extraction time criteria (7 days) and then re-analyzed as the initial analysis results were not consistent with historical data; the samples were re-extracted out of hold time with significantly lower results. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported.

With regard to initial MW23-ROX-112923 PAH data, the laboratory previously issued a Corrective Action Report (CAR) stating that through confirmation analyses, many previous detections were not confirmed and were therefore deemed laboratory contamination. Based on professional judgement, the results from the re-analysis were used for the purposes of this report. Data requiring qualification is summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW23-ROX-112923 -RERA | PAHs | All non-detects | **UJ** |

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD/ RPD Criteria |
|---|---|---|---|---|---|
| LCS/LCSD 400-652972/4-A/5-A | SVOCs | Benzenethiol | **4**/97 | **183** | 10-120/30 |

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Professional judgment was used to qualify, however not reject, data associated with benzenethiol below evaluation criteria; benzenethiol has been identified as a poor performing analyte under Method 8270.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW23-ROX-112923 | SVOCs | Benzenethiol | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| MB 400-652972/1-A | PAHs | Terphenyl-$d_{14}$ | **158** | 18-147 |

Qualifications due to surrogate recoveries were not required if only one of three base/neutral and/or acid surrogate recoveries were outside evaluation criteria. Method blanks are quality control samples and do not require qualification. No qualification of data was required.

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

No

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

Yes

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples analyzed as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; samples analyzed did not require dilution.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, the continuing calibration verification (CCV) for benzo[g,h,i]perylene was outside evaluation criteria, biased low. Benzo[g,h,i]perylene in sample MW23-ROX-112923 RERA was previously qualified in Section 3.0 of this data review due to hold time exceedances; no further qualification is required.

### Laboratory: Eurofins Pensacola

**Narrative**

**Job Narrative**
**400-247492-1**

**Receipt**
The samples were received on 11/30/2023 9:28 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.0º C.

**GC/MS VOA**
Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-112923-8260-BP (400-247492-1) and MW23-ROX-112923 (400-247492-3). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-633903 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC/MS Semi VOA**
Method 8270E: The laboratory control sample (LCS) for preparation batch 400-652972 and analytical batch 400-653218 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-652972 and analytical batch 400-653218 recovered outside control limits for the following analyte: Benzenethiol.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-652774 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-653195 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-654224 recovered above the upper control limit for Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene and Dibenz(a,h)anthracene. The samples associated with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-654319 recovered above the upper control limit for Benzo[a]anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-654319 recovered outside acceptance criteria, low biased, for Benzo[g,h,i]perylene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E SIM: The following sample was re-prepared outside of preparation holding time for confirmation: MW23-ROX-112923 (400-247492-3). Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the case narrative indicated that PAHs in samples MW6D-ROX-113023, MW6C-ROX-113023, and MW6A-ROX-113023 were re-extracted 6 days outside extraction time criteria. LCS/LCSD recoveries and the LCS/LCSD RPD for benzenethiol were outside evaluation criteria. Several VOC MS/MSD recoveries, and/or MS/MSD RPDs, were outside evaluation criteria in sample MW6D-ROX-113023. The continuing calibration verification (CCV) for chloroethane was outside evaluation criteria, biased low. The continuing calibration verification (CCV) for benzo[g,h,i]perylene was outside evaluation criteria, biased high. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in samples MW6D-ROX-113023, MW6C-ROX-113023, and MW6A-ROX-113023 were re-extracted 6 days outside of extraction time criteria (7 days) for confirmation; the samples were re-extracted out of hold time and the results for samples MW6D-ROX-113023 and MW6C-ROX-113023 were non-detect. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported.

The results for the re-extracted and re-analyzed sample MW6A-ROX-113023 were

comparable to the initial results; based on professional judgement, the results from the initial analysis were used for the purposes of this report.

With regard to initial MW6D-ROX-113023 and MW6C-ROX-113023 PAH data, the laboratory previously issued a Corrective Action Report (CAR) stating that through confirmation analyses, many previous detections were not confirmed and were therefore deemed laboratory contamination. Based on professional judgement, the results from the re-analysis were used for the purposes of this report. Data requiring qualification is summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW6D-ROX-113023-RERA | PAHs | All non-detects | **UJ** |
| MW6C-ROX-113023-RERA | PAHs | All non-detects | **UJ** |

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD/ RPD Criteria |
|---|---|---|---|---|---|
| LCS/LCSD 400-652972/4-A/5-A | SVOCs | Benzenethiol | **4**/97 | **183** | 10-120/30 |

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Professional judgment was used to qualify, however not reject, data associated with benzenethiol below evaluation criteria; benzenethiol has been identified as a poor performing analyte under Method 8270.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW6D-ROX-113023 | SVOCs | Benzenethiol | **UJ** |
| MW6C-ROX-113023 | SVOCs | Benzenethiol | **UJ** |
| MW6A-ROX-113023 | SVOCs | Benzenethiol | **UJ** |
| MW6B-ROX-113023 | SVOCs | Benzenethiol | **UJ** |

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| MB 400-652972/1-A | PAHs | Terphenyl-$d_{14}$ | **158** | 18-147 |

Method blanks are quality control samples and do not require qualification. No qualification of data was required.

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

Yes, although not requested, sample MW6D-ROX-113023 was spiked and duplicated for Method 8260D VOCs.

*Were MS/MSD recoveries within evaluation criteria?*

No

| MS/MSD ID | Parameter | Analyte | MS/MSD Recovery (%) | RPD | MS/MSD/ RPD Criteria |

Analytical data that required qualification based on MS/MSD data are included in the table below. Professional judgement was used to qualify; however, not reject the compound 2-chloroethyl vinyl ether due to acceptable LCS recoveries for this compound and to the acid reactive nature of 2-chloroethyl vinyl ether. Analytical data associated with MS/MSD RPD alone outside evaluation criteria did not require qualification.

**Receipt**
The samples were received on 12/1/2023 9:26 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.0º C.

**GC/MS VOA**
Methods 8260D, SM6200-B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-653096 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Methods 8260D, SM6200-B: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 400-653096 was outside control limits. Sample matrix interference is suspected.

Methods 8260D, SM6200-B: The continuing calibration verification (CCV) associated with batch 400-653096 recovered outside acceptance criteria, low biased, for Chloroethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-113023-8260-B (400-247591-1), MW6D-ROX-113023-EB (400-247591-3), MW6D-ROX-113023 (400-247591-4), MW6C-ROX-113023 (400-247591-5), MW6A-ROX-113023 (400-247591-6) and MW6B-ROX-113023 (400-247591-7). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-653096 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-653096 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-633903 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC/MS Semi VOA**
Method 8270E: The laboratory control sample (LCS) for preparation batch 400-652972 and analytical batch 400-653218 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-652972 and analytical batch 400-653218 recovered outside control limits for the following analyte: Benzenethiol.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-652774 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-653195 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside

acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 400-652972/1-A). These results have been reported and qualified.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-654224 recovered above the upper control limit for Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene and Dibenz(a,h)anthracene. The samples associated with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-654319 recovered above the upper control limit for Benzo[a]anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-654319 recovered outside acceptance criteria, low biased, for Benzo[g,h,i]perylene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E SIM: The following samples were re-prepared outside of preparation holding time for confirmation: MW6D-ROX-113023 (400-247591-4), MW6C-ROX-113023 (400-247591-5) and MW6A-ROX-113023 (400-247591-6). Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

| Sample Identification | Sample Identification |
|---|---|

| ROST4PZE-ROX-113023-EB | ROST4PZE-ROX-113023 |
| MW2-ROX-113023 | MW22-ROX-113023 |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated PAHs were re-extracted outside extraction time criteria in samples ROST4PZE-ROX-113023, MW2-ROX-113023, and MW22-ROX-113023; bis(2-ethylhexyl) phthalate in sample MW22-ROX-113023 was also re-extracted outside of the extraction time criteria. Benzenethiol LCS/LCSD recoveries and LCS/LCSD RPD were outside evaluation criteria. Several SVOC surrogate recoveries were outside criteria in several investigative and quality control samples. 2-chloroethyl vinyl ether MS/MSD recoveries were outside evaluation criteria in sample ROST4PZE-ROX-113023. The continuing calibration verification (CCV) for chloroethane was outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review. The laboratory report was revised on January 8, 2024, to correct trip blank sample IDs.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in samples ROST4PZE-ROX-113023, MW2-ROX-113023, and MW22-ROX-113023 were re-extracted 7 days outside of extraction time criteria (7 days) for confirmation. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported.

The results for the re-extracted and re-analyzed for sample MW22-ROX-113023 were comparable to the initial results; based on professional judgement, the results from the

initial analysis were used for the purposes of this report.

With regard to initial ROST4PZE-ROX-113023 and MW2-ROX-113023 PAH data, the laboratory previously issued a Corrective Action Report (CAR) stating that through confirmation analyses, many previous detections were not confirmed and were therefore deemed laboratory contamination. Based on professional judgement, the results from the re-analysis were used for the purposes of this report.

Additionally, bis(2-ethylhexyl) phthalate in sample MW22-ROX-113023 was re-extracted 7 days outside extraction holding time criteria (7 days) and then re-analyzed for confirmation. Based on professional judgement, the results from the re-analysis were used for the purposes of this report.

**Job Narrative**
**400-247593-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Revision**
Report revised to fix TB sample IDs.
Supersedes report dated 12-19-2023.

**Receipt**
The samples were received on 12/1/2023 9:26 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C

**GC/MS VOA**
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-652956 recovered outside acceptance criteria, low biased, for Chloroethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-113023-8260-A (400-247593-1), ROST4PZE-ROX-113023-EB (400-247593-3), ROST4PZE-ROX-113023 (400-247593-4), MW2-ROX-113023 (400-247593-5) and MW22-ROX-113023 (400-247593-6). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-652956 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-652956 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: MW22-ROX-113023 (400-247593-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC/MS Semi VOA**
Method 8270E: The laboratory control sample (LCS) for preparation batch 400-652972 and analytical batch 400-653218 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-652972 and analytical batch 400-653218 recovered outside control limits for the following analytes: Benzenethiol.

Method 8270E: Surrogate recovery for the following sample was outside control limits: ROST4PZE-ROX-113023 (400-247593-4). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-652774 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may

proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Sample MW22-ROX-113023 (400-247593-6) was re-analyzed to confirm a detection of Bis(2-ethylhexyl) phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-653195 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: ROST4PZE-ROX-113023-EB (400-247593-3). These results have been reported and qualified.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654774 recovered above the upper control limit for Benzo[a]anthracene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The following samples were re-prepared outside of preparation holding time to verify original results: ROST4PZE-ROX-113023 (400-247593-4), MW2-ROX-113023 (400-247593-5) and MW22-ROX-113023 (400-247593-6). Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC Semi VOA**
Method 8011: The continuing calibration verification (CCV) associated with batch 400-653100 recovered above the upper control limit for 1,2-Dibromo-3-Chloropropane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the case narrative stated that PAHs in field duplicate pair MW14-ROX-120123/MW14-ROX-120123-DUP were re-extracted 7 days outside extraction time criteria. Several SVOC LCS/LCSD recoveries and/or LCS/LCSD RPDs, were outside evaluation criteria. Results for 1,2,4-trimethylbenzene in field duplicate pair MW14-ROX-120123/MW14-ROX-120123-DUP were qualified as estimated (**J/J**) as the difference in results was greater than two times (2X) the reporting level. The continuing calibration verifications (CCV) for chloroethane and n-nitrosodimethylamine were outside evaluation criteria, biased low. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in field duplicate pair MW14-ROX-120123/MW14-ROX-120123-DUP were re-extracted 7 days outside of extraction time criteria (7 days) and then re-analyzed for confirmation. Holding time exceedances were not greater than two times (2X) criteria. The results for the re-extracted and re-analyzed samples were comparable to the initial results; both sets of data are reported. Based on professional judgement, the results from the initial analysis were used for the purposes of this report. No qualification of data was required.

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Professional judgment was used to qualify, however not reject, data associated with benzenethiol below evaluation criteria; benzenethiol has been identified as a poor performing analyte under Method 8270. Analytical data associated with LCS/LCS RPD alone outside evaluation criteria did not require qualification.

**Job Narrative**
**400-247654-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**
The samples were received on 12/2/2023 8:23 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C

**GC/MS VOA**
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-653096 recovered outside acceptance criteria, low biased, for Chloroethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-120123-8260-A (400-247654-1), MW14-ROX-120123 (400-247654-3) and MW14-ROX-120123-DUP (400-247654-4). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-633903 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC/MS Semi VOA**
Method 8270E: The following analyte(s) recovered outside control limits for the LCSD associated with preparation batch 400-653399 and analytical batch 400-653805: bis (2-chloroisopropyl) ether. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-653399 and 400-653399 and analytical batch 400-653805 recovered outside control limits for the following analytes: Hexachloroethane, N-Nitrosodimethylamine, 2,4-Dinitrophenol, Phenol, Benzoic acid, Benzenethiol,Hexachlorocyclopentadiene, 2-Chlorophenol, 1,4-Dioxane, Pyridine and Aniline.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-653399 and analytical batch 400-653805 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered outside acceptance criteria, low biased, for N-Nitrosodimethylamine. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered above the upper control limit for Benzenethiol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered above the upper control

limit for 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 4-Chlorophenyl phenyl ether, Hexachlorobenzene, 2,4-Dinitrotoluene, Hexachlorocyclopentadiene, 4-Nitrophenol and Di-n-octyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 400-653805/3).

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-652826 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-653755 recovered above the upper control limit for Benzo[g,h,i]perylene and Dibenz(a,h)anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654774 recovered above the upper control limit for Benzo[a]anthracene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The following samples were re-prepared outside of preparation holding time to verify original results: MW14-ROX-120123 (400-247654-3) and MW14-ROX-120123-DUP (400-247654-4). Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC Semi VOA**
Method 8011: The continuing calibration verification (CCV) associated with batch 400-653100 recovered above the upper control limit for 1,2-Dibromo-3-Chloropropane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

## Qualifiers

### GC/MS VOA

| Qualifier | Qualifier Description |
|---|---|
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

### GC/MS Semi VOA

| Qualifier | Qualifier Description |
|---|---|
| *- | LCS and/or LCSD is outside acceptance limits, low biased. |
| *1 | LCS/LCSD RPD exceeds control limits. |
| E | Result exceeded calibration range. |
| H | Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated that several SVOC LCS/LCSD recoveries and/or LCS/LCSD RPDs, were outside evaluation criteria. Results for benzene in field duplicate pair P93C-ROX-120123/P93C-ROX-120123-DUP were qualified as estimated (**J**/**J**) due to field duplicate RPD above evaluation criteria. VOCs in sample P93C-ROX-120123 were diluted to bring target analytes into calibration range of the instrument. The continuing calibration verifications (CCV) for chloroethane and n-nitrosodimethylamine were outside evaluation criteria, biased low. The continuing calibration verification (CCV) for dibenz(a,h)anthracene was outside evaluation criteria, biased high. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

No

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

Analytical data that required qualification based on LCS/LCSD data are included in the table below. Professional judgment was used to qualify, however not reject, data associated with benzenethiol below evaluation criteria; benzenethiol has been identified as a poor performing analyte under Method 8270. Analytical data associated with LCS/LCS RPD alone outside evaluation criteria did not require qualification.

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted with the exception of non-detect VOCs in sample P93C-ROX-120123-DUP to bring benzene into calibration range of the instrument. VOCs were non-detect at a dilution factor of 500X, with raised reporting limits of between 500 and 13,000 µg/L. Due to historical detections, please see Section 12.0 of this data review for additional qualifications.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, the continuing calibration verifications (CCVs) for chloroethane and n-nitrosodimethylamine were outside evaluation criteria, biased low. The continuing calibration verification (CCV) for dibenz(a,h)anthracene was outside evaluation criteria, biased high. Chloroethane in sample P93C-ROX-120123-DUP is qualified in Section 12.0 of this data review due to a sample dilution; no further qualification is required. Analytes are qualified as summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| P56-ROX-120123 | VOCs | Chloroethane | **UJ** |
| P93A-ROX-120123 | VOCs | Chloroethane | **UJ** |

**Narrative**

**Job Narrative**
**400-247655-1**

**Receipt**
The samples were received on 12/2/2023 8:23 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.0º C.

**GC/MS VOA**
Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: P93C-ROX-120123 (400-247655-5) and P93C-ROX-120123-DUP (400-247655-6). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-653111 recovered outside acceptance criteria, low biased, for Chloroethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-653111 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-120123-8260-A (400-247655-1), P56-ROX-120123 (400-247655-3), P93A-ROX-120123 (400-247655-4), P93C-ROX-120123 (400-247655-5) and P93C-ROX-120123-DUP (400-247655-6). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-653111 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-653111 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC/MS Semi VOA**
Method 8270E: The following analyte(s) recovered outside control limits for the LCSD associated with preparation batch 400-653399 and analytical batch 400-653805: bis (2-chloroisopropyl) ether. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-653399 and 400-653399 and analytical batch 400-653805 recovered outside control limits for the following analytes: Hexachloroethane, N-Nitrosodimethylamine, 2,4-Dinitrophenol, Phenol, Benzoic acid, Benzenethiol,Hexachlorocyclopentadiene, 2-Chlorophenol, 1,4-Dioxane, Pyridine and Aniline.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 400-653399 and analytical batch 400-653805 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered outside acceptance criteria, low biased, for N-Nitrosodimethylamine. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered above the upper control limit for Benzenethiol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

## Job ID: 400-247655-1 (Continued)

### Laboratory: Eurofins Pensacola (Continued)

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered above the upper control limit for 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 4-Chlorophenyl phenyl ether, Hexachlorobenzene, 2,4-Dinitrotoluene, Hexachlorocyclopentadiene, 4-Nitrophenol and Di-n-octyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 400-653805/3).

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-653755 recovered above the upper control limit for Benzo[g,h,i]perylene and Dibenz(a,h)anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GC Semi VOA**

Method 8011: The continuing calibration verification (CCV) associated with batch 400-653100 recovered above the upper control limit for 1,2-Dibromo-3-Chloropropane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the laboratory case narrative indicated PAHs were re-extracted outside extraction time criteria in sample MW25-ROX-120423; SVOCs in sample MW25-ROX-120423 were also re-extracted outside of the extraction time criteria. bis(2-Ethylhexyl) phthalate in samples MW7-ROX-120423-DUP and T12-ROX-120423 were re-extracted outside of the extraction time criteria. Dimethyl phthalate was detected in equipment blank MW4-ROX-120423-EB and method blank MB 400-653593/1-A. Several SVOC LCS/LCSD recoveries, and/or SVOC LCS/LCSD RPDs, were outside evaluation criteria. Several SVOC surrogate recoveries were outside criteria in several investigative and quality control samples. Several VOC MS/MSD recoveries were outside evaluation criteria in sample MW4-ROX-120423. Results for phenol in field duplicate pair MW7-ROX-120423/MW7-ROX-120423-DUP were qualified as estimated **(J/J)** due to field duplicate RPD above evaluation criteria. The continuing calibration verification (CCV) for n-nitrosodimethylamine was outside evaluation criteria, biased low. The continuing calibration verification (CCV) for benzo[a]anthracene was outside evaluation criteria, biased high. VOCs in field duplicate pair MW7-ROX-120423/MW7-ROX-120423-DUP were diluted to bring target analytes into calibration range of the instrument. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

No, PAHs in sample MW25-ROX-120423 were re-extracted 2 days outside of extraction time criteria (7 days) for confirmation; the samples were re-extracted out of hold time and the results were non-detect. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported.

With regard to initial MW25-ROX-120423 PAH data, the laboratory previously issued a Corrective Action Report (CAR) stating that through confirmation analyses, many previous detections were not confirmed and were therefore deemed laboratory contamination. Based on professional judgement, the results from the re-analysis were used for the purposes of this report.

SVOCs in sample MW25-ROX-120423 were re-extracted 2 days outside of extraction time criteria (7 days) due to initial failing surrogate recoveries. Holding time exceedances were not greater than two times (2X) criteria; both sets of data are reported. The results for the re-extracted and re-analyzed SVOCs in sample MW25-ROX-120423 were comparable to the initial results. Therefore, using professional judgement, SVOCs in sample MW25-ROX-120423 were reported from the initial run; qualifications due to surrogate recovery are reported in Section 6.0 of this data review.

Additionally, bis(2-ethylhexyl) phthalate in samples MW7-ROX-120423-DUP and T12-ROX-120423 were re-extracted between 2 to 9 days outside extraction holding time criteria (7 days) and then re-analyzed for confirmation. Based on professional judgement, the results from the re-analysis were used for the purposes of this report.

Data requiring qualification is summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW25-ROX-120423—RERA | PAHs | All non-detects | **UJ** |
| MW7-ROX-120423-DUP—RERA | SVOCs | bis(2-ethylhexyl) phthalate | **UJ** |
| T12-ROX-120423—RERA | SVOCs | bis(2-ethylhexyl) phthalate | **UJ** |

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration /Amount |

| MB 400-653593/1-A | SVOCs | Dimethyl phthalate | 1.06 ug/L |

Qualifications due to blank contamination are included in the table below. Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. Equipment blanks are quality control samples and do not require qualification.

Analytical data that required qualification based on surrogate data are included in the table below. Professional judgement was used to qualify as estimated, however, not

reject SVOC MW25-ROX-120423 data associated with poor surrogate recoveries. Qualifications due to surrogate recoveries were not required if only one of three base/neutral and/or acid surrogate recoveries were outside evaluation criteria. Method blanks are quality control samples and do not require qualification.

Analytical data that required qualification based on MS/MSD data are included in the table below. Professional judgement was used to qualify; however, not reject the analyte 2-chloroethyl vinyl ether due to acceptable LCS recoveries for this compound and to the acid reactive nature of 2-chloroethyl vinyl ether.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| MW4-ROX-120423 | VOCs | 2-Chloroethyl vinyl ether | **UJ** |

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted with the exception of non-detect VOCs in field duplicate pair MW7-ROX-120423/MW7-ROX-120423-DUP to bring benzene into calibration range of the instrument. VOCs were non-detect at a dilution factor of 2000X, with raised reporting limits of between 2000 and 50,000 µg/L. Due to historical detections, please see Section 12.0 of the data review for additional qualifications.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, the continuing calibration verification (CCV) for n-nitrosodimethylamine was outside evaluation criteria, biased low. The continuing calibration verification (CCV) for benzo[a]anthracene was outside evaluation criteria, biased high. Benzo[g,h,i]perylene in sample MW25-ROX-120423-RERA was previously qualified in Section 3.0 of this data review due to holding time exceedances; no further qualification is required. Analytes are qualified as summarized in the following table.

| MW7-ROX-120423 | VOCs | All non-detect | **UJ** |
| MW7-ROX-120423-DUP | VOCs | All non-detect | **UJ** |

**Job Narrative**
**400-247720-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**
The samples were received on 12/5/2023 9:22 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 2.6°C

**GC/MS VOA**
Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-633903 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW7-ROX-120423 (400-247720-6), MW7-ROX-120423-DUP (400-247720-7), P74-ROX-120423 (400-247720-12), T12-ROX-120423 (400-247720-13), T12-ROX-120423-DUP (400-247720-14) and P59-ROX-120423 (400-247720-15). Elevated reporting limits (RLs) are provided.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-120423-8260-A (400-247720-1), MW4-ROX-120423-EB (400-247720-3), MW4-ROX-120423 (400-247720-4), MW25-ROX-120423 (400-247720-5), MW7-ROX-120423 (400-247720-6), MW7-ROX-120423-DUP (400-247720-7), P93D-ROX-120423 (400-247720-8), TB-ROX-120423-8260-B (400-247720-9), P57-ROX-120423 (400-247720-11), P74-ROX-120423 (400-247720-12), T12-ROX-120423 (400-247720-13), T12-ROX-120423-DUP (400-247720-14) and P59-ROX-120423 (400-247720-15). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recovery for analytical batch 400-653443 was outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-653443 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-653443 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC/MS Semi VOA**
Method 8270E: The following analyte(s) recovered outside control limits for the LCSD associated with preparation batch 400-653399 and analytical batch 400-653805: bis (2-chloroisopropyl) ether. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-653399 and 400-653399 and analytical batch 400-653805 recovered outside control limits for the following analytes: Hexachloroethane, N-Nitrosodimethylamine, 2,4-Dinitrophenol, Phenol, Benzoic acid, Benzenethiol,Hexachlorocyclopentadiene, 2-Chlorophenol, 1,4-Dioxane, Pyridine and Aniline.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch

400-653399 and analytical batch 400-653805 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered outside acceptance criteria, low biased, for N-Nitrosodimethylamine. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered above the upper control limit for Benzenethiol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E: The continuing calibration verification (CCV) associated with batch 400-653805 recovered above the upper control limit for 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 4-Chlorophenyl phenyl ether, Hexachlorobenzene, 2,4-Dinitrotoluene, Hexachlorocyclopentadiene, 4-Nitrophenol and Di-n-octyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 400-653805/3).

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: MW7-ROX-120423-DUP (400-247720-7). These results have been reported and qualified.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-653593 and analytical batch 400-654186 recovered outside control limits for the following analytes: Benzenethiol.

Method 8270E: The method blank for preparation batch 400-653593 and analytical batch 400-654186 contained Dimethyl phthalate above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-652826 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Surrogate recovery for the following sample was outside control limits: MW25-ROX-120423 (400-247720-5). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data have been reported.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 400-653912/1-A). These results have been reported and qualified.

Method 8270E: The laboratory control sample (LCS) for preparation batch 400-653912 and analytical batch 400-654340 recovered outside control limits for the following analyte(s): Benzenethiol. Benzenethiol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-653912 and analytical batch 400-654340 recovered outside control limits for the following analytes: Benzenethiol.

Method 8270E: The initial calibration verification (ICV) analyzed in batch 400-653222 was outside method criteria for the following analyte(s): 2,4-Dimethylphenol and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Sample T12-ROX-120423 (400-247720-13) was re-analyzed to confirm a detection of Bis(2-ethylhexyl) phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-653755 recovered above the upper control limit for Benzo[g,h,i]perylene and Dibenz(a,h)anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654224 recovered above the upper control limit for Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene and Dibenz(a,h)anthracene. The samples associated

with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654319 recovered above the upper control limit for Benzo[a]anthracene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654319 recovered outside acceptance criteria, low biased, for Benzo[g,h,i]perylene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_SIM: The following sample was re-prepared outside of preparation holding time for confirmation: MW25-ROX-120423 (400-247720-5). Both sets of data are reported.

# Roxana Groundwater Monthly – November/December 2023 Data Review

**Laboratory SDG: 400-247828-1**

**Data Reviewer: Andrei Niculau**

**Peer Reviewer: Cheyana Cokley**

**Date Reviewed: 1/8/2024**

**Guidance: USEPA National Functional Guidelines for Organic Superfund Methods Data Review 2020**

| Sample Identification | Sample Identification |
|---|---|
| TB-ROX-120523-8260 | P58-ROX-120523 |
| TB-ROX-120523-8011 | P93B-ROX-120523 |

## 1.0 Data Package Completeness

*Were all items delivered as specified in the QAPP and COC as appropriate?*

Yes

## 2.0 Laboratory Case Narrative \ Cooler Receipt Form

*Were problems noted in the laboratory case narrative or cooler receipt form?*

Yes, the case narrative indicated that benzenethiol LCS/LCSD RPD was outside evaluation criteria. The SVOC surrogate recovery for terphenyl-$d_{14}$ was outside criteria in sample P58-ROX-120523. The continuing calibration verification (CCV) for dichlorodifluoromethane and chloromethane were outside evaluation criteria, biased low. The continuing calibration verification (CCV) for benzo[a]anthracene was outside evaluation criteria, biased high. VOCs in sample P93B-ROX-120523 were diluted to bring target analytes into calibration range of the instrument. These issues are addressed further in the appropriate sections of this data review.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

The cooler receipt form did not indicate any problems.

## 3.0 Holding Times

*Were samples extracted/analyzed within applicable limits?*

Yes

## 4.0 Blank Contamination

*Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?*

Yes

| Blank ID | Parameter | Analyte | Concentration/Amount |
|---|---|---|---|
| MB 400-653593/1-A | SVOCs | Dimethyl phthalate | 1.06 µg/L |

Analytical data that were reported non-detect or at concentrations greater than five times

(5X) the associated blank concentration did not require qualification. No qualification of data was required.

## 5.0 Laboratory Control Sample

*Were LCS recoveries within evaluation criteria?*

No

| LCS/LCSD ID | Parameter | Analyte | LCS/LCSD Recovery | RPD | LCS/LCSD/ RPD Criteria |
|---|---|---|---|---|---|
| LCS/LCSD 400-653593/4-A/5-A | SVOCs | Benzenethiol | 51/34 | **39** | 10-120/30 |

Analytical data associated with LCS/LCSD RPD alone outside evaluation criteria did not require qualification. No qualification of data was required.

## 6.0 Surrogate Recoveries

*Were surrogate recoveries within evaluation criteria?*

No

| Sample ID | Parameter | Surrogate | Recovery (%) | Criteria (%) |
|---|---|---|---|---|
| P58-ROX-120523 | SVOCs | Terphenyl-$d_{14}$ | **43** | 44-149 |

Qualifications due to surrogate recoveries were not required if only one of three base/neutral and/or acid surrogate recoveries were outside evaluation criteria. No qualification of data was required.

## 7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

*Were MS/MSD samples analyzed as part of this SDG?*

No

## 8.0 Internal Standard (IS) Recoveries

*Were internal standard area recoveries within evaluation criteria?*

Yes

## 9.0 Laboratory Duplicate Results

*Were laboratory duplicate samples analyzed as part of this SDG?*

No

## 10.0 Field Duplicate Results

*Were field duplicate samples collected as part of this SDG?*

No

## 11.0 Sample Dilutions

*For samples that were diluted and nondetect, were undiluted results also reported?*

Not applicable; analytes were detected in samples that were diluted with the exception of non-detect VOCs in sample P93B-ROX-120523 to bring benzene into calibration range of the instrument. VOCs were non-detect at a dilution factor of 5000X, with raised reporting limits of between 5,000 and 130,000 µg/L. Due to historical detections, please

see Section 12.0 of the data review for additional qualifications.

## 12.0 Additional Qualifications

*Were additional qualifications applied?*

Yes, the initial calibration verification (ICV) was outside evaluation criteria for benzo[a]anthracene, biased high. The continuing calibration verification (CCV) for dichlorodifluoromethane and chloromethane were outside evaluation criteria, biased low. Dichlorodifluoromethane and chloromethane in sample P93B-ROX-120523 are qualified per Section 11.0 of this data review due to sample dilution; no further qualification is required. Benzo[a]anthracene was qualified due to continuing calibration verification (CCV) outside evaluation criteria, biased high. Analytes are qualified as summarized in the following table.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| P58-ROX-120523 | VOCs | Dichlorodifluoromethane | **UJ** |
| P58-ROX-120523 | VOCs | Chloromethane | **UJ** |
| P58-ROX-120523 | PAHs | Benzo[a]anthracene | **J** |

Additionally, VOCs in sample P93B-ROX-110422 were qualified as estimated non-detect due to sample dilution and historical detections.

| Sample ID | Parameter | Analyte | Qualification |
|---|---|---|---|
| P93B-ROX-120523 | VOCs | All non-detects | **UJ** |

**Job Narrative**
**400-247828-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**
The samples were received on 12/6/2023 9:21 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C

**GC/MS VOA**
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-653472 recovered outside acceptance criteria, low biased, for Chloromethane and Dichlorodifluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-653472 recovered above the upper control limit for Vinyl acetate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: P58-ROX-120523 (400-247828-3) and P93B-ROX-120523 (400-247828-4). Elevated reporting limits (RLs) are provided.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-120523-8260 (400-247828-1), P58-ROX-120523 (400-247828-3) and P93B-ROX-120523 (400-247828-4). The requested target analyte list include 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-627009 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**GC/MS Semi VOA**
Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-653593 and analytical batch 400-654186 recovered outside control limits for the following analytes: Benzenethiol.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: P58-ROX-120523 (400-247828-3). These results have been reported and qualified.

Method 8270E: The following sample was diluted to bring the concentration of target analytes within the calibration range: P58-ROX-120523 (400-247828-3). Elevated reporting limits (RLs) are provided.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 400-654224 recovered above the upper control limit for Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene and Dibenz(a,h)anthracene. The samples associated with this CCV were below the reporting limit for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

## Job ID: 400-247828-1 (Continued) Eurofins Pensacola

**GC Semi VOA**
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

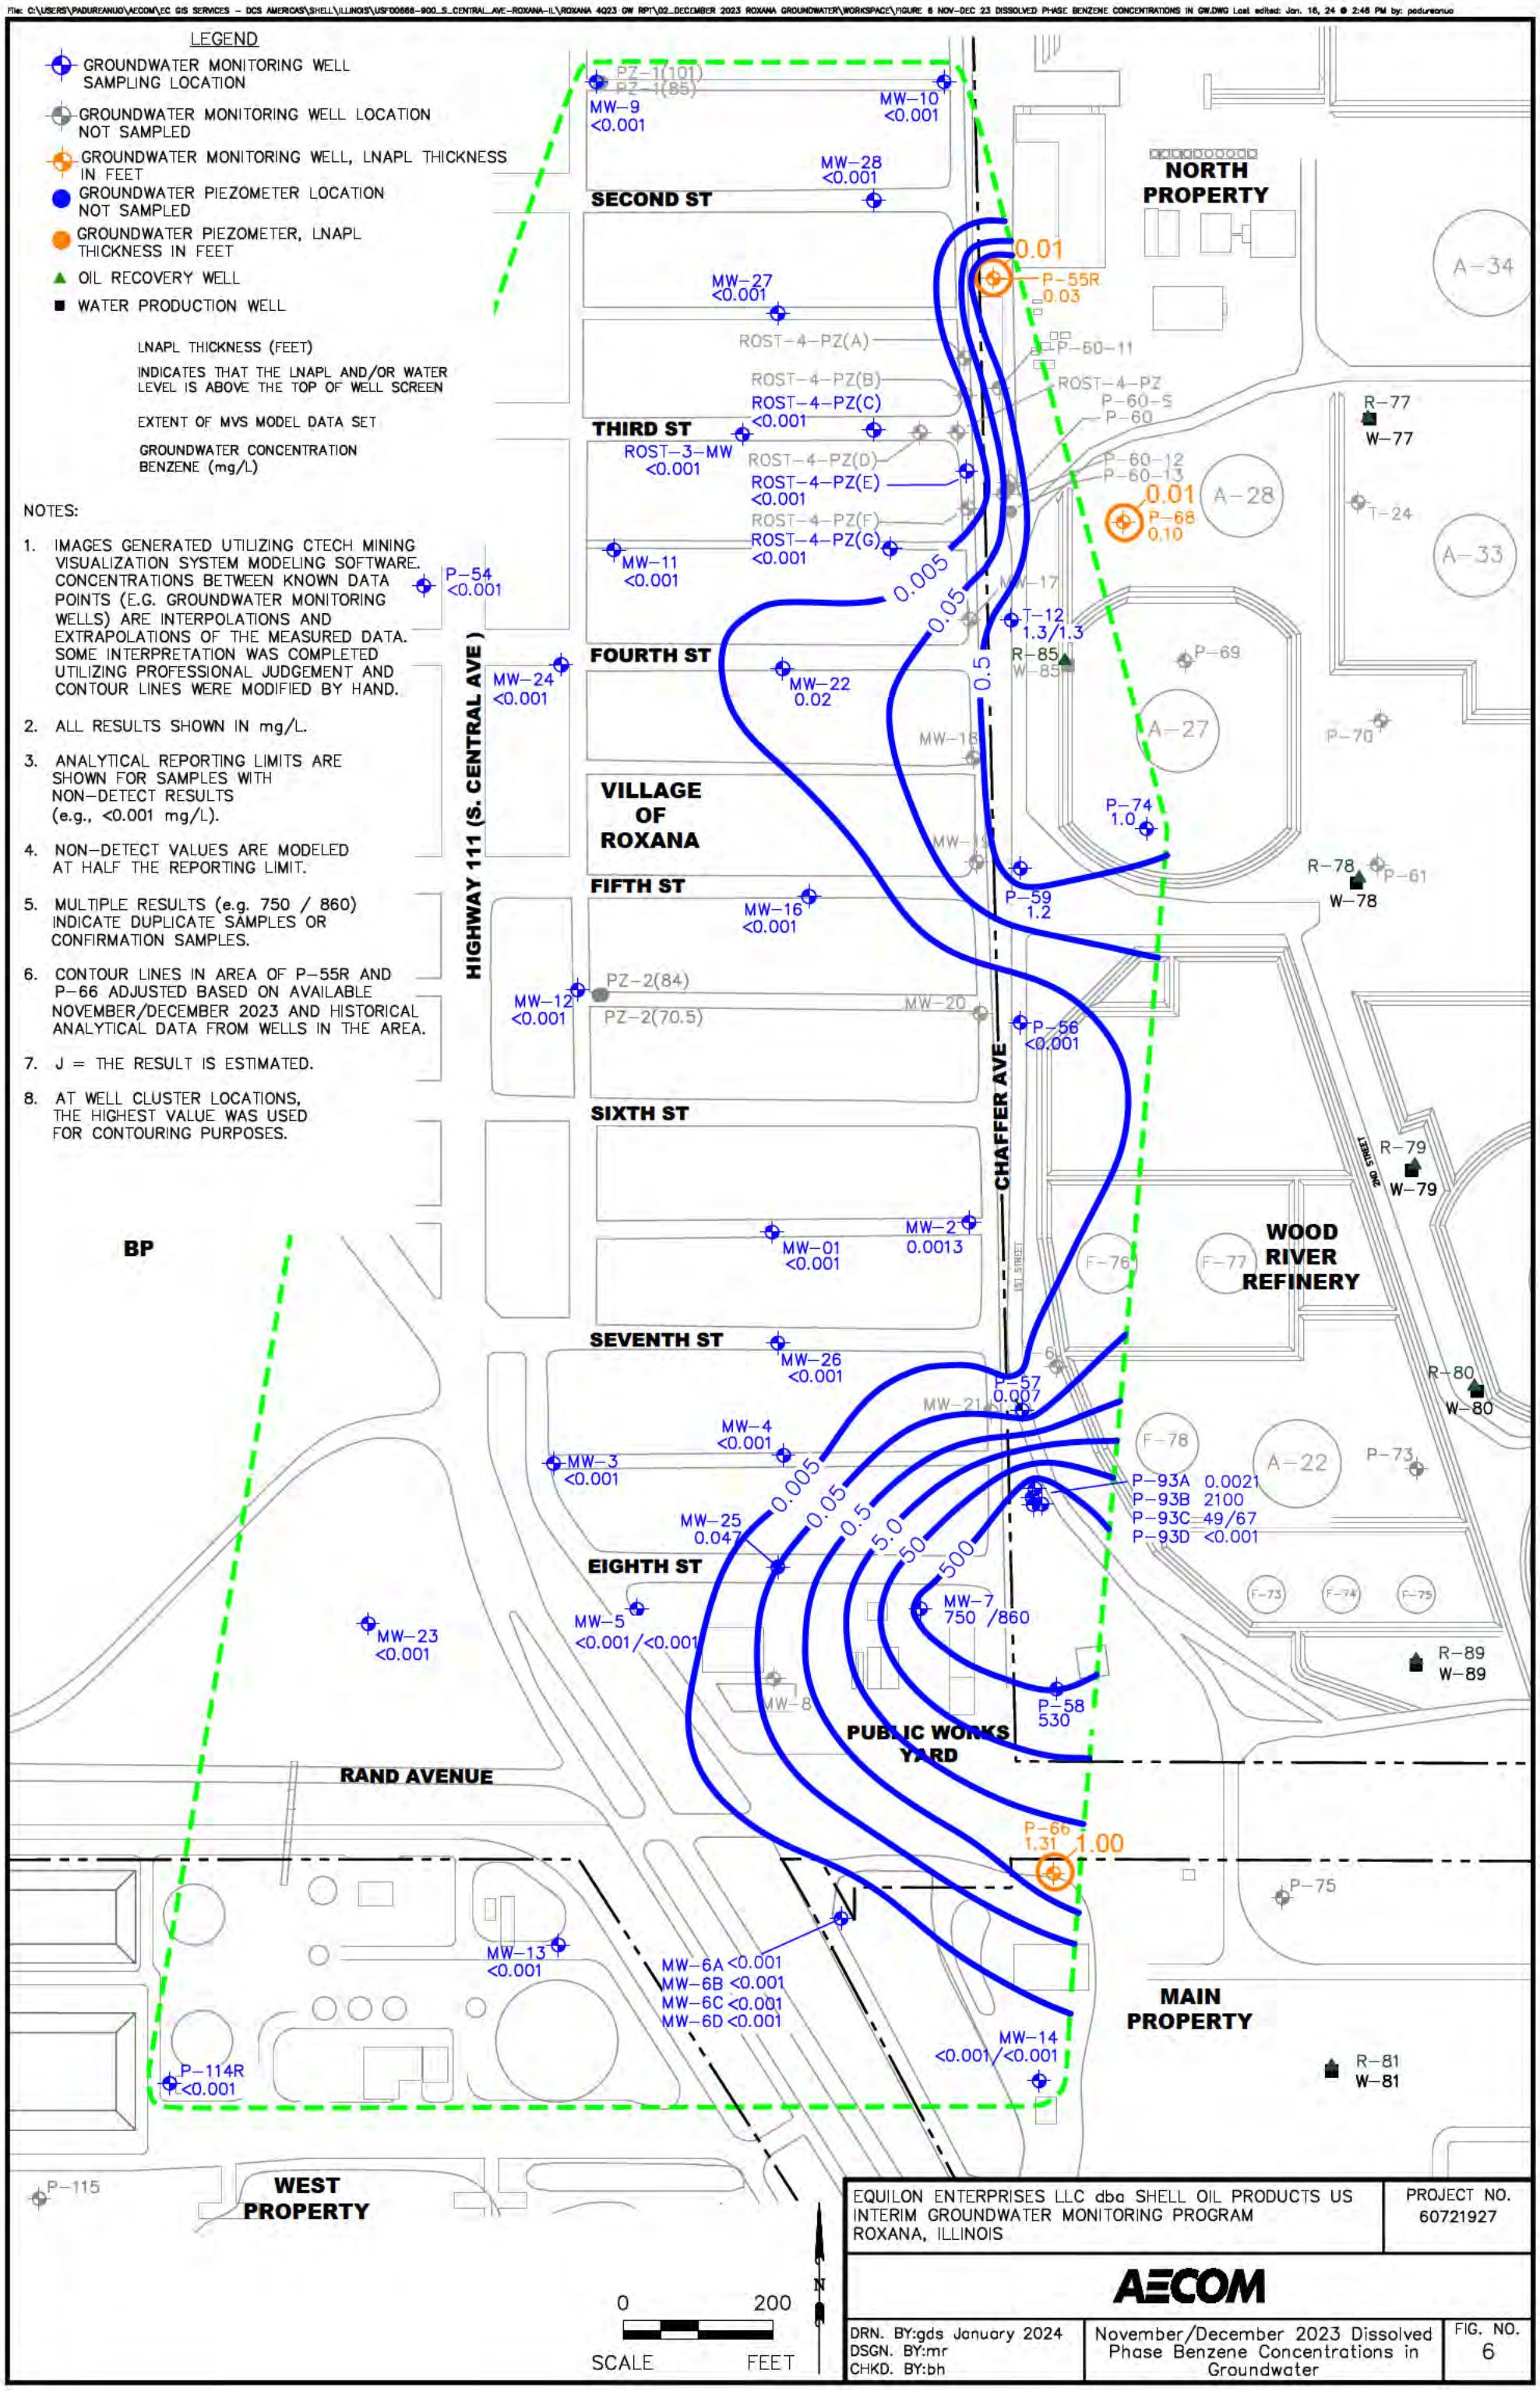
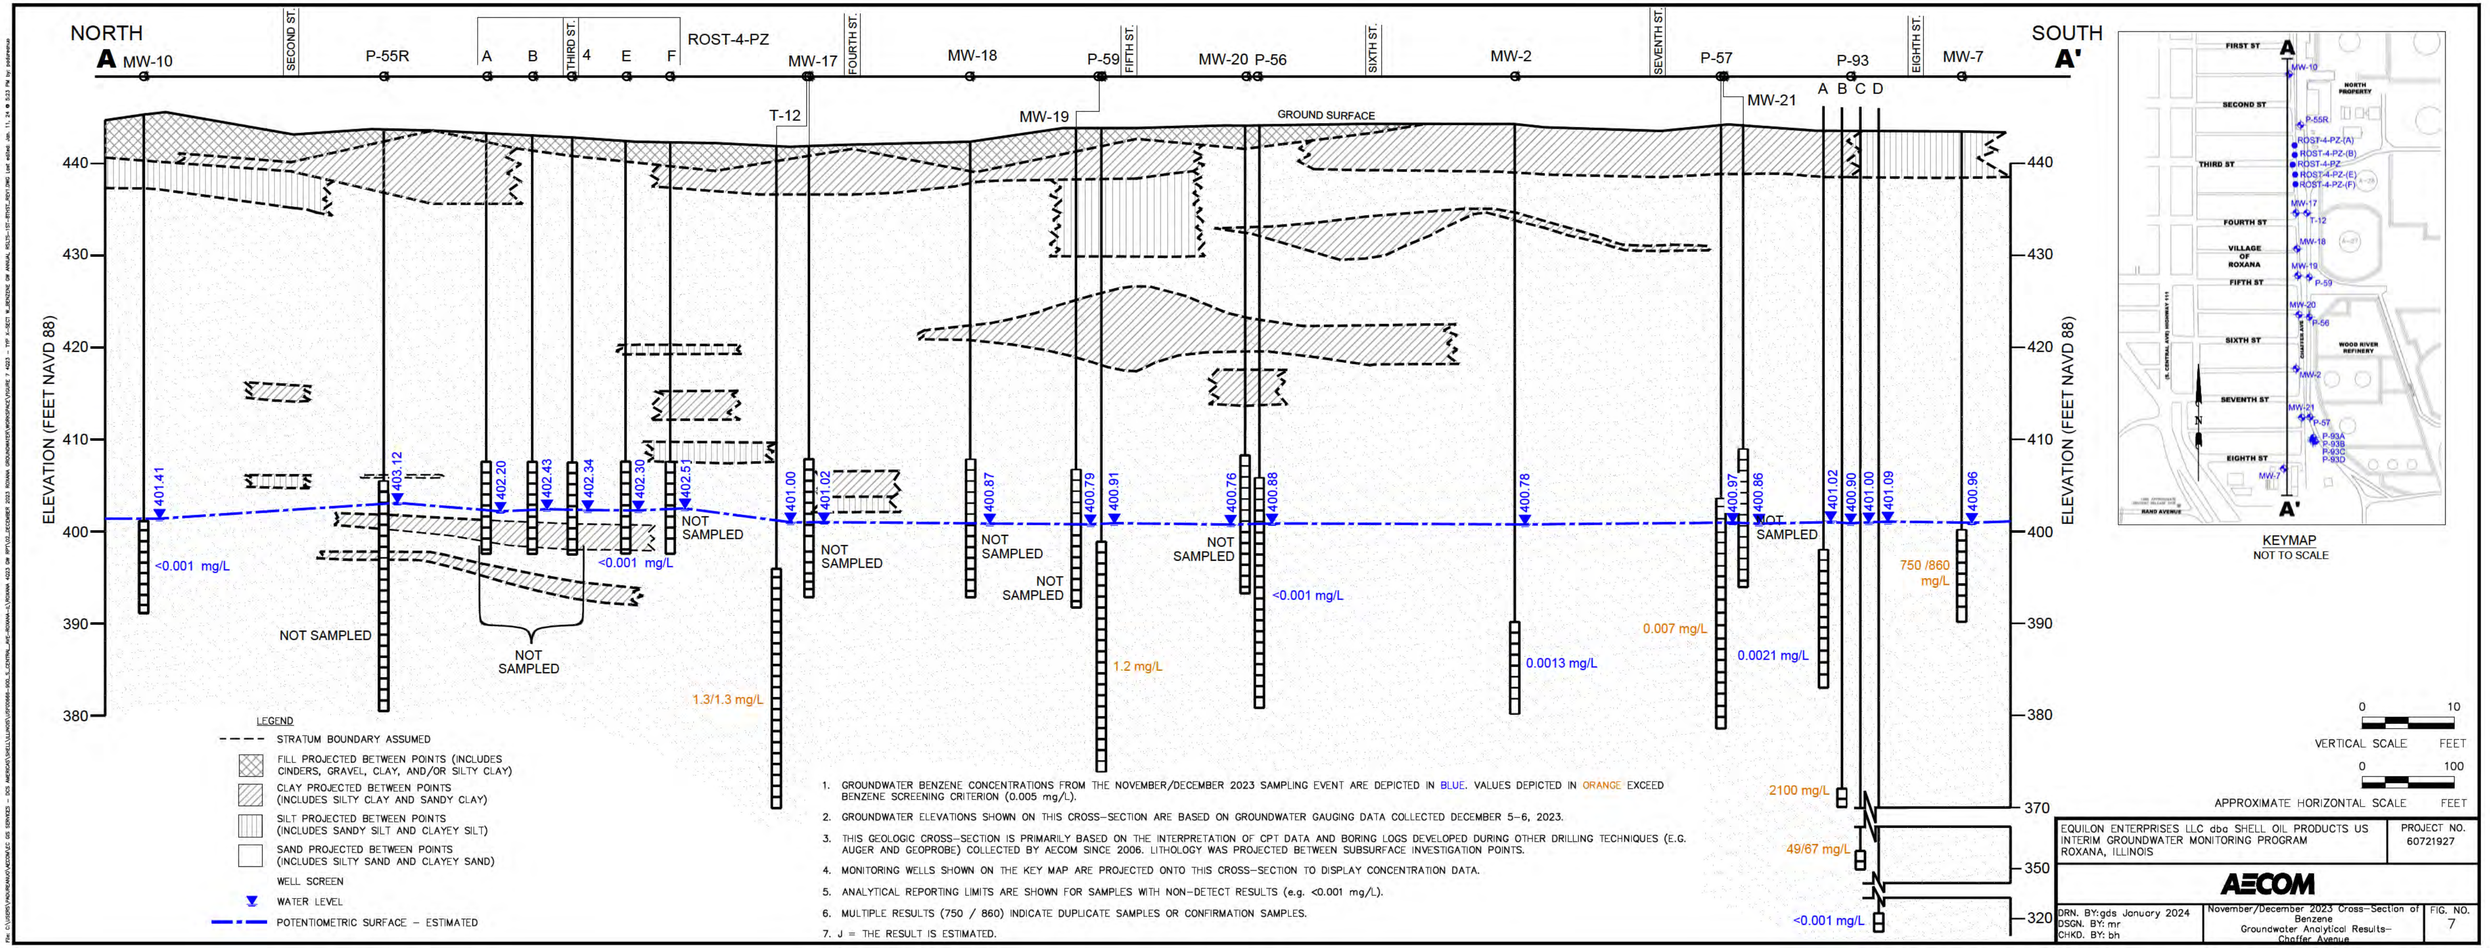
LNAPL THICKNESS (FEET)



INDICATES THAT THE LNAPL AND/OR WATER LEVEL IS ABOVE THE TOP OF WELL SCREEN

EXTENT OF MVS MODEL DATA SET



GROUNDWATER CONCENTRATION BENZENE (mg/L)

NOTES:

1. IMAGES GENERATED UTILIZING CTECH MINING VISUALIZATION SYSTEM MODELING SOFTWARE. CONCENTRATIONS BETWEEN KNOWN DATA POINTS (E.G. GROUNDWATER MONITORING WELLS) ARE INTERPOLATIONS AND EXTRAPOLATIONS OF THE MEASURED DATA. SOME INTERPRETATION WAS COMPLETED UTILIZING PROFESSIONAL JUDGEMENT AND CONTOUR LINES WERE MODIFIED BY HAND.
2. ALL RESULTS SHOWN IN mg/L.
3. ANALYTICAL REPORTING LIMITS ARE SHOWN FOR SAMPLES WITH NON-DETECT RESULTS (e.g., <0.001 mg/L).
4. NON-DETECT VALUES ARE MODELED AT HALF THE REPORTING LIMIT.
5. MULTIPLE RESULTS (e.g. 750 / 860) INDICATE DUPLICATE SAMPLES OR CONFIRMATION SAMPLES.
6. CONTOUR LINES IN AREA OF P-55R AND P-66 ADJUSTED BASED ON AVAILABLE NOVEMBER/DECEMBER 2023 AND HISTORICAL ANALYTICAL DATA FROM WELLS IN THE AREA.
7. J = THE RESULT IS ESTIMATED.
8. AT WELL CLUSTER LOCATIONS, THE HIGHEST VALUE WAS USED FOR CONTOURING PURPOSES.

1. GROUNDWATER BENZENE CONCENTRATIONS FROM THE NOVEMBER/DECEMBER 2023 SAMPLING EVENT ARE DEPICTED IN BLUE. VALUES DEPICTED IN ORANGE EXCEED BENZENE SCREENING CRITERION (0.005 mg/L).
2. GROUNDWATER ELEVATIONS SHOWN ON THIS CROSS-SECTION ARE BASED ON GROUNDWATER GAUGING DATA COLLECTED DECEMBER 5–6, 2023.
3. THIS GEOLOGIC CROSS-SECTION IS PRIMARILY BASED ON THE INTERPRETATION OF CPT DATA AND BORING LOGS DEVELOPED DURING OTHER DRILLING TECHNIQUES (E.G. AUGER AND GEOPROBE) COLLECTED BY AECOM SINCE 2006. LITHOLOGY WAS PROJECTED BETWEEN SUBSURFACE INVESTIGATION POINTS.
4. MONITORING WELLS SHOWN ON THE KEY MAP ARE PROJECTED ONTO THIS CROSS-SECTION TO DISPLAY CONCENTRATION DATA.
5. ANALYTICAL REPORTING LIMITS ARE SHOWN FOR SAMPLES WITH NON-DETECT RESULTS (e.g. <0.001 mg/L).
6. MULTIPLE RESULTS (750 / 860) INDICATE DUPLICATE SAMPLES OR CONFIRMATION SAMPLES.
7. J = THE RESULT IS ESTIMATED.
