ILLINOIS EPA RCRA CORRECTIVE ACTION CERTIFICATION

This certification must accompany any document submitted to Illinois EPA in accordance with the corrective action requirements set forth in a facility's RCRA permit. The original and two copies of all documents submitted must be provided.

1.0 Facility Identification

Name: Equilon Enterprises LLC d/b/a/ Shell
County: Madison
Street Address: 900 South Central Ave
Site No. (IEPA): 1191150002
City: Roxana
Site No. (USEPA): ILD080 012 305

2.0 Owner Information

Name: Not Applicable
Mail Address:
City:
State: Zip Code:
Contact Name:
Contact Title:
Phone:

3.0 Operator Information

Name: Equilon Enterprises LLC d/b/a/ Shell
Mail Address: 128 East Center Street
City: Nazareth
State: PA Zip Code: 18064
Contact Name: Leroy Bealer
Contact Title: Senior Program Manager
Phone: 484-632-7955

4.0 Type of Submission (check applicable item and provide requested information, as applicable)

☐ RFI Phase I Workplan/Report
☐ RFI Phase II Workplan/Report
☐ CMP Report;
☒ Other (describe): Soil Vapor Sampling and SVE Monitoring Report - 2nd Quarter 2024

IEPA Permit Log No. B-43R
Date of Last IEPA Letter on Project June 21, 2024
Log No. of Last IEPA Letter on Project B-43R--M-52 and B-43R-M-52
Does this submittal include groundwater information: ☒ Yes ☐ No

Date of Submittal August 8, 2024

5.0 Description of Submittal: (briefly describe what is being submitted and its purpose)

Soil Vapor Sampling and SVE Monitoring Report for the 2nd Quarter 2024 in the project area located in the Village of Roxana, Illinois.

6.0 Documents Submitted (identify all documents in submittal, including cover letter; give dates of all documents)

Cover letter, RCRA Corrective Action Certification, and Report dated 8/8/2024. Copy of submittal also sent directly to V. Poornaka, T. Halteman, and A. Al-Janabi of IEPA.

7.0 Certification Statement

(This statement is part of the overall certification being provided by the owner/operator, professional and laboratory in Items 7.1, 7.2 and 7.3 below). The activities described in the subject submittals have been carried out in accordance with procedures approved by Illinois EPA. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

7.1 Owner/Operator Certification

(Must be completed for all submittals. Certification and signature requirements are set forth in 35 IAC 702.126.) All submittals pertaining to the corrective action requirements set forth in a RCRA Permit must be signed by the person designated below (or by a duly authorized representative of that person):

1. For a Corporation, by a principal executive officer of at least the level of vice president.
2. For a Partnership or Sole Proprietorship, by a general partner or the proprietor, respectively.
3. For a Governmental Entity, by either a principal executive officer or a ranking elected official.

A person is a duly authorized representative only if:

1. the authorization is made in writing by a person described above; and
2. the written authorization is provided with this submittal (a copy of a previously submitted authorization can be used).

Owner Signature: _____ Date: _____

Title: _____

Operator Signature: _____ Date: 7/19/2024

Title: **Senior Program Manager**

7.2 Professional Certification (if necessary)

Work carried out in this submittal or the regulations may also be subject to other laws governing professional services, such as the Illinois Professional Land Surveyor Act of 1989, the Professional Engineering Practice Act of 1989, the Professional Geologist Licensing Act, and the Structural Engineering Licensing Act of 1989. No one is relieved from compliance with these laws and the regulations adopted pursuant to these laws. All work that falls within the scope and definitions of these laws must be performed in compliance with them. The Illinois EPA may refer any discovered violation of these laws to the appropriate regulating authority.

Any person who knowingly makes a false, fictitious, or fraudulent material statement, orally or in writing, to the Illinois EPA commits a Class 4 felony. A second or subsequent offense after conviction is a Class 3 felony. (415 ILCS 5/44 (h))

Equilon Enterprises LLC d/b/a Shell Oil Products US
Log No. B-43R

Dear Ms. Cooperider:

On behalf of Equilon Enterprises LLC d/b/a Shell Oil Products US (Shell), AECOM Technical Services, Inc. (AECOM) is submitting the enclosed report for your review. This report includes information required by Condition 11 of the Illinois Environmental Protection Agency's (IEPA) letter dated May 28, 2015.

Electronic copies of this submittal are being sent separately directly to Visal Poornaka and Ali Al-Janabi with the IEPA.

If you have any questions during your review, please contact Leroy Bealer, Shell Senior Program Manager, at leroy.bealer@shell.com (484-632-7955), or Wendy Pennington at wendy.pennington@aecom.com (314-452-8929).

Sincerely,

AECOM, on behalf of Shell Oil Products US

1 Introduction

AECOM Technical Services, Inc. (AECOM) is submitting this 2nd Quarter 2024 Soil Vapor Sampling and SVE Monitoring Report on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell). Shell has been conducting a subsurface investigation in the Village of Roxana in the area generally bounded by the alley north of East 1st Street, the Roxana Public Works Yard, Illinois Route 111, and the property boundary (a/k/a West Fenceline [WFL]) of the WRB Refining, LP (WRB) Wood River Refinery (WRR) (**Figure 1**). Additional investigation has been conducted inside the WRR; this work was conducted in cooperation with WRB/Phillips 66 (P66). For the purposes of presentation in this report only, the combined area is collectively referred to as the "Investigation Area." The Investigation Area includes a portion of a residential area in the Village of Roxana, Roxana Public Works Yard, and the adjoining portions of the WRR. For the purposes of this report, the term "Village" is used to denote the residential area generally bounded by the alley north of East 1st Street (north), 8th Street (south), Chaffer Avenue (east), and Illinois Route 111 (South Central Avenue) (west). The Investigation Area and locations of VMPs in the soil vapor sampling network are presented on **Figure 2.** Site background information and regulatory history are presented in **Appendix A**.

2 Description of Subsurface Conditions

This section summarizes the current understanding of the Investigation Area geology and hydrogeology.

2.1 Geology

The Investigation Area is located approximately 1.5 miles east of the Mississippi River within the American Bottoms floodplain. The surface topography is generally flat; however, it slopes downward to the west-southwest in the southwestern portion of the Village, with a total drop in elevation of approximately 15 feet across the area.

The ground surface in the Village within the Investigation Area, where not developed with structures, is primarily grass covered with paved (i.e., chip and seal, asphalt, etc.) alleys and streets. Beneath any man-made fill material, the subsurface conditions generally consist of silty clay underlain by sands to the depths investigated.

Subsurface stratigraphy within the Investigation Area generally consists of the following materials, from the ground surface down.

- Fill – (mainly clay, some gravel and cinders, etc.) Extends from the surface to approximately six feet below ground surface (bgs).
- Clay/Silt – (primarily silty clay) Where present, the clay generally extends from the base of the fill to approximately 12 feet bgs.
- Sand – (consisting primarily of fine to medium grained (which coarsens with depth) sand with some silt and clay, especially at the shallower depths). The sand begins at the base of the clay (or base of the fill if the clay is not present) and extends to the total depth of the borings.

Discontinuous lower permeability lenses of clay with some silt and sand are occasionally present. These lenses vary in thickness from 1 inch to a few feet and do not appear to be laterally (or vertically) extensive.

Cross-sections depicting the underlying geology were previously presented in the Dissolved Phase Groundwater Investigation and P-60 Free Phase Product Delineation Report (URS, 2010a). These cross-sections were developed based on information provided on cone penetration test (CPT) logs and soil boring logs. A modified cross-section presenting analytical data is discussed in **Section 4.3** of this report.

2.2 Hydrogeology

Groundwater in the sand underlying the Investigation Area is the primary source for large volume water production in the area (e.g., industrial and municipal supply). Prior to development in the area, the natural movement of groundwater was toward the west (toward the Mississippi River). Since development in the area, groundwater pumping has altered the groundwater flow in the area to flow toward nearby pumping wells (e.g., WRR, British Petroleum [BP], etc.).

The water table encountered during the 2nd Quarter 2024 (2Q24) was at a depth of approximately 29 to 45 feet bgs (approximate elevation of 400.0 to 402.2 North American Vertical Datum [NAVD 88]). The variation in depth of groundwater from the ground surface is partially due to a change in surface elevation across the Investigation Area. As a result, there is generally a 25 to 40 foot thick vadose (unsaturated) zone in the sand. Groundwater levels in most wells in the vicinity of the West Fenceline have fallen approximately 0.6 ft since the 1Q24 gauging event. Water level measurements collected during the 2Q24 groundwater gauging event and historical water level measurements collected over the current quarter and previous three quarters are provided in **Table 1**. Depth to product (if present)

and depth to water were noted in electronic format using Dell Rugged laptop computers (computer), or similar, and on groundwater field gauging sheets.

There are discontinuous low permeability silt and clay lenses above the water table (approximately 20 to 30 feet bgs) mixed with silt and sand. These lenses are isolated and limited in occurrence. There are additional discontinuous clay lenses at a depth of approximately 35 to 45 feet bgs localized in the area between East 2nd and 4th Street and Chaffer Avenue. These may be above or below the water table depending on groundwater conditions. As a result, the groundwater contours displayed on **Figures 3 and 4** show a slight mounding in this area.

The potentiometric surface observed during the 2Q24 comprehensive groundwater monitoring well gauging[1] (**Figure 3**) illustrates groundwater flow within the Village and WRR. **Figure 4** provides the groundwater potentiometric surface for the Investigation Area in 2Q24.

[1] 2Q24 comprehensive groundwater monitoring well gauging performed April 1-3, 2024.

3 Soil Vapor Sampling and Analytical Procedures

The 2Q24 soil vapor sampling event was performed in accordance with ASTM D-7663-18 and applicable site-specific Standard Operating Procedures (SOPs) that incorporate previous IEPA comments, conditions, and/or modifications. Current SOPs are provided to the IEPA as updates are made. The 2Q24 soil vapor sampling event was conducted April 25 – May 6, 2024, and was the 56th quarterly sampling event performed since the IEPA requirement for quarterly soil vapor sampling began in 3rd Quarter 2010.

3.1 Vapor Monitoring Port Sampling

The soil vapor sampling network currently consists of 61 VMP locations (**Figure 2**), of which 44 locations are currently being utilized for quarterly sampling. VMPs in the quarterly sampling program are generally screened at four depths[2] at each location. The individual VMPs are labeled and color-coded in the field from shallow to deep by using the color scheme of yellow (1st interval), blue (2nd interval), green (3rd interval), and red (4th interval). Additional VMPs installed as part of a supplemental sampling event in 2nd Quarter 2010 (2Q10) are color-coded white (10-foot depth). Vapor ports installed during 3Q11 and 4Q11 do not have the shallow (5-foot depth) port included and begin with the blue interval port. Soil VMP depths are provided in **Table 2**.

Saturated VMP Screens – The groundwater monitoring well gauging results suggested that 10 of the VMP screens were submerged beneath the water table (or a temporary water condition) during 2Q24; details are provided below.

- Two 1st interval VMPs, VMP-25-5 and VMP-55-5, held vacuum during the attempted purge and were most likely submerged. The screen for VMP-55-5 is within fill material, and it is not unusual for shallow water to be trapped in the fill.
- Two 2nd interval VMPs, VMP-25-9.5 and VMP-55-10, held vacuum during the attempted purge and were most likely submerged. The screens for VMP-25-9.5 and VMP-55-10 are within fill material, and it is not unusual for shallow water to be trapped in the fill.
- One 3rd interval VMP, VMP-25-21 held vacuum during the attempted purge and were most likely submerged.
- Five 4th interval VMPs, VMP-2-42, VMP-4-39, VMP-11-38, VMP-55-30, and VMP-64-28 held vacuum during the attempted purge and were most likely submerged.

VMP Screens within Capillary Fringe Soil Layer – Condition 3.d of IEPA's March 13, 2023 letter states soil vapor samples must be collected "above the capillary fringe soil layer located 37.5 cm [1.23 ft] above the top of the groundwater." 2Q24 groundwater gauging results were compared to VMP screen elevations and it was determined that none of the VMP screens were within the capillary fringe in 2Q24.

VMPs that were submerged or within the capillary fringe and were not sampled during 2Q24 are identified on **Figure 4**.

Field measurements from this event and the previous three quarterly events are provided on **Table 3**.

[2] With the exception of single shallow ports at VMP-17, 18, 19, three ports at VMP-41 through VMP-45, VMP-56, and five ports at VMP-3.

3.2 Health & Safety, Decontamination, and Investigation Derived Waste

Health & Safety

The quarterly sampling activities were performed in accordance with the project-specific Health and Safety Plan (HASP), dated February 2, 2022 (AECOM, 2022d).

Prior to beginning site work and at the start of work each day, a daily safety meeting was held. The purpose of this meeting was to discuss the day's planned activities and to address any potential health and safety concerns. As a part of the daily safety meeting, job safety analyses (now known as Task Hazard Assessments [THAs]) were prepared to address task specific safety concerns.

Field personnel primarily wore U.S. Environmental Protection Agency (USEPA) modified Level D personal protective equipment (PPE), which included hard hat, steel-toed boots, safety glasses, etc. In addition, work within the WRR was performed wearing flame retardant clothing (FRCs) per WRR requirements (in areas where required).

A PID with a 10.6 electron volt (eV) probe, combustible gas indicator (CGI), UltraRAE 3000 with benzene specific measuring tubes, and individual hydrogen sulfide gas detectors (for locations inside WRR) were used as needed during the field activities to monitor air quality. Field instruments were calibrated prior to use each day in accordance with the manufacturer's specifications.

Decontamination

Field personnel and equipment underwent decontamination procedures to ensure the health and safety of those present, to maintain sample integrity, and to minimize cross-contamination. Non-disposable/reusable sampling equipment (e.g., compression fittings) was decontaminated prior to the collection of each analytical sample by spraying with Liquinox® and distilled water. For stainless steel vapor sampling equipment, a 60 mL syringe was attached to the sampling apparatus and ambient air was pumped into the sampling apparatus to remove any internal dust particles or moisture. Personnel and small equipment decontamination were performed at the sample locations.

Investigation Derived Waste

Investigation derived waste (IDW) for this sampling event included PPE and expendable materials (e.g., gloves and tubing), which have a low probability of impact. The expendable materials were collected in trash bags and disposed with municipal waste.

3.3 Sample Handling and Laboratory Testing

Sample Handling

Stainless-steel canisters were labeled with a sample ID, site name, sampler initials, sample date and time, the parameters that were to be analyzed, and pre- and post- vacuum readings. After collection, the samples were logged on a chain-of-custody (COC) form and packaged in an UN-certified box to prevent damage during shipment. The samples were then delivered under the proper COC documentation to the laboratory. Due to the potential flammable nature of the vapor in the stainless-steel canisters, some soil vapor samples were shipped as hazardous materials according to applicable regulations.

Laboratory Testing

Eurofins Air Toxics, Inc. (Eurofins) of Folsom, California conducted the laboratory testing and the following test methods were utilized during this scope of work.

- Volatile Organic Compounds (VOCs) via Modified USEPA Total Organic-15 (TO-15) (including butane and isopentane) for soil vapor, and
- Natural gases (defined for purposes of this report as oxygen, nitrogen, carbon monoxide, methane, carbon dioxide, ethane, and ethene) via Modified ASTM D-1946 + Helium for soil vapor.

AECOM worked with the laboratory to attain reporting limits for compounds that have screening criteria so that, to the extent possible, the reporting limits were less than the screening criteria. In some cases, this necessitated reporting results between the method detection limit (MDL) and reporting limit (RL). Although results reported in this range are "J"-flagged as estimated, these data may be beneficial in cases where analytes would otherwise be reported as non-detect at RLs above screening levels. The laboratory provided AECOM with a list of their “base” RL capability for target analytes. Sample RLs are a product of base RL, pressurization dilution factor, and analytical dilution factor. Thus, the sample RL will increase with increases in the dilution factor. Results that were reported below the RLs but above the MDL were “J”-flagged as estimated concentrations by the laboratory.

3.4 Data Quality Review and Data Management

Laboratory data were provided in electronic form, and analytical data were independently reviewed and qualified by AECOM. One hundred percent of the data were subjected to a data quality review. Evaluation of the data followed procedures outlined in the USEPA National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2020). Specific criteria reviewed included sample receipt condition and holding times, method blanks, surrogate spike recoveries, laboratory control samples, results reported from dilutions, and field duplicate results. The laboratory assigned data qualifiers on the basis of their quality control or to indicate sample analysis information (e.g., dilutions). Data qualifiers were also added by AECOM, as appropriate, and are included on the data tables and laboratory result pages. Laboratory reports are included in the project files.

The screening values used were presented in the IEPA’s Tiered Approach to Corrective Action Objectives (TACO) Title 35 – Part 742; Appendix B, Table H: Tier 1 Soil Gas and Groundwater Remediation Objectives for the Indoor Inhalation Exposure Route – Diffusion and Advection for soil vapor effective July 15, 2013 (IEPA, 2013) and are shown on **Table 4**. Not all TO-15 Method constituents have TACO Tier 1 screening criteria.

Field data and documentation collected as part of this scope of work became part of the project file. AECOM maintains the files for the site and the database management system.

4 Soil Vapor Sampling Results

4.1 Data Quality Review Results

A total of 147 investigative samples and 16 field duplicate samples were collected from VMPs for analysis of VOCs (TO-15 analytes) and natural gases. Results qualified by AECOM due to method blank contamination, field duplicate results, and quality control sample recoveries are specified in the data reviews, which are retained in the project file. Based on method blanks, laboratory control sample recoveries, results reported from dilutions, and field duplicate results, soil vapor results reported for the analyses performed were accepted for their intended use.

4.2 Soil Vapor Analytical Results

The following TO-15 analytes were detected at concentrations at or above the reporting limit in soil vapor during the 2Q24 sampling event:

TO-15 Detections	
1,2,4-Trimethylbenzene	Ethanol
1,3,5-Trimethylbenzene	Ethylbenzene
2,2,4-Trimethylpentane	Heptane
2-Propanol	Hexane
4-Ethyltoluene	Isopentane
Benzene	m,p-Xylene
Bromodichloromethane	o-Xylene
Butane	Tetrachloroethene
Chloroform	Trichloroethene
Dichlorodifluoromethane	

No analytes were detected at or above the reporting limit for the first time at any VMP in 2Q24. In addition to this list, several analytes were detected at estimated concentrations below the reporting limit. A cumulative tabular summary of the analytical results for the Village is presented in **Table 5**. A cumulative tabular summary of data for the Roxana Public Works Yard and WRR is presented in **Table 6**. Analytical results were compared to the previously mentioned screening values. Sample results from VMP-1 through VMP-9, VMP-18 through VMP-24, VMP-32, VMP-42 through VMP-45, VMP-47 through VMP-54, VMP-56, and VMP-62 through VMP-64 (located near residences in the Village) were compared against the residential screening criteria. Samples from VMP-10 through VMP-17, VMP-25, VMP-29, VMP-30, VMP-41, and VMP-55 (located at or near the Roxana Public Works Yard or WRR) were compared against the industrial/commercial screening criteria. A cumulative tabular summary of the results for natural gases is presented in **Table 7**. **Tables 5, 6, and 7** present results for the reporting quarter plus three previous quarters.

Benzene was selected as the key analyte to characterize soil vapor in the paragraphs below.

Village

Benzene was not detected in 122 of 129 samples. Benzene was detected above the RL in 2 of 129 samples and was estimated between the MDL and RL in 5 of 129 samples collected in the Village. Concentrations of benzene from locations within the Village ranged from an estimated 0.00092 mg/m^3 (VMP-53-30) to an estimated 0.0064 mg/m^3 (VMP-48-10), with one outlier result of 42 mg/m^3 (VMP-56-38.5; 38.5 ft bgs). The results for samples collected in the Village indicate that one sample, VMP-56-38.5 had a benzene concentration above the residential screening criterion (0.37 mg/m^3).

Roxana Public Works Yard Area

Benzene was not detected in 24 of 26 samples. Benzene was not detected above the RL in any of the samples and was estimated between the MDL and RL in 2 of 26 samples collected in the Roxana Public Works Yard and the area along Illinois Route 111 and Rand Avenue. Concentrations of benzene from locations within the Public Works Yard Area ranged from an estimated 0.0013 mg/m^3 (VMP-14-29) to an estimated 0.0021 mg/m^3 (VMP-13-29.5). The results of samples collected from the Roxana Public Works Yard and area along Illinois Route 111 and Rand Avenue indicate that no samples exceeded the commercial/industrial screening criterion (2.8 mg/m^3) for benzene.

Wood River Refinery

Benzene was not detected in 4 of 8 samples collected in the WRR. Benzene was detected above the RL in 4 of 8 samples, and in none of the samples was benzene estimated between the MDL and RL in the WRR. Concentrations of benzene ranged from 7.9 mg/m^3 (VMP-16-13.5) to 330 mg/m^3 (VMP-12-39). The results of samples collected in the WRR indicate that 4 samples exceeded the commercial/industrial screening criterion (2.8 mg/m^3) for benzene (VMP-12-39, VMP-16-13.5, VMP-16-19 and VMP-16-31; 39 ft, 13.5 ft, 19 ft, and 31 ft bgs, respectively).

2Q24 analytical exceedances for benzene and other TO-15 analytes in soil vapor for samples collected in all areas are depicted on **Figure 5**.

Benzene and Methane Charts

Charts of historical analytical benzene and methane concentrations for each VMP are depicted in **Appendix B**.

Natural Gas (Biogenic) Data

Natural gas data indicate that, where petroleum impacts are present, the concentration of methane increases from shallow to deep sample depths, while oxygen concentrations decrease from shallow to deep sample depths (methane and oxygen are generally inversely correlated in soil vapor). Over time, the trend in oxygen levels in most VMPs has been generally increasing since the SVE system has been operating. Higher oxygen levels (>5%) with lower methane levels indicate an environment capable of supporting aerobic biodegradation (Ririe et al., 1998). 2Q24 oxygen levels were within the range of historical values. A summary of the natural gas results is presented in **Table 7**.

4.3 Conceptual Site Model

Vapor Intrusion

The primary concern for shallow soil gas is the potential for intrusion through basement and/or building slabs. In September 2011, Shell began installation of a full scale SVE system to address the source of these vapors. The system became operational on January 31, 2012, following the completion of the 1st Quarter 2012 (1Q12) sampling effort. The objective of the SVE system is to mitigate vapors along the WFL of the WRR and in the vicinity of the Roxana Public Works Yard. Construction of the Roxana Public Works Yard portion of the SVE system was completed during 4Q12, and this portion became operational on December 3, 2012. Construction of the Red Line Extension portion of the SVE system was completed during 4Q13, and this portion became operational on October 23, 2013. Construction of the Blue Line Extension portion of the SVE system was completed during 4Q14, and this portion became operational on

November 5, 2014. Refer to **Section 5** for further discussion on SVE system operation. **Figure 6** presents a cross-section along Chaffer Avenue with a vertical distribution of the benzene concentrations superimposed.

At most locations, oxygen is present in the shallow depths and little or no aromatic hydrocarbons (e.g., BTEX) are present. Carbon dioxide levels are relatively high throughout the soil column at many locations, which supports that degradation of petroleum hydrocarbons is occurring via aerobic biodegradation. Depending on groundwater fluctuations there can be up to 40 feet of open vadose zone which allows for biodegradation of constituents in soil vapor as they slowly diffuse upwards.

C Tech Development Corporation's Mining Visualization System PRO, Version 9.94 (MVS-PRO) was used to model the estimated distribution of benzene in the soil vapor above IEPA TACO screening criteria for 2Q24. **Figures 7, 8, and 9** present a horizontal distribution of benzene at 5, 10, and 25 ft. bgs, respectively. Contour lines are not depicted on **Figure 7** as sample concentrations at the 5 ft. depth across the study area were below the residential screening criterion (0.37 mg/m^3).

Groundwater Monitoring Well Gauging and Sampling

The results for groundwater monitoring well gauging and sampling are presented in the Interim Groundwater Monitoring Program – 2nd Quarter 2024 Report (AECOM, 2024a). **Figure 10** presents the estimated distribution of dissolved phase benzene in the groundwater. Light non-aqueous phase liquid (LNAPL) thicknesses, observed during the 2Q24 comprehensive monitoring well gauging, are presented in **Table 1** and shown on **Figure 10**.

VMP-54

Concentrations of chloroform at VMP-54 have increased since the summer of 2020, which coincided with the installation of a pool in the residents' backyard immediately northeast of VMP-54. Increased concentrations of chloroform were not observed at monitoring wells MW-3 or MW-4, which are to the west and east, respectively, of VMP-54 (AECOM, 2024a). Chloroform is a common disinfectant byproduct in municipal water and can be present in higher concentrations in chlorinated pool water.

Buckeye Pipeline Release

In November 2020 a gasoline release was discovered at a pipeline owned and operated by Buckeye Partners LP. The release is associated with IEPA Violation Notice L-2021-00084, LPC #1190905036 – Madison County. The release site was located within the Investigation Area off the southeast corner of the Public Works Yard, between WRR North and Main Properties. In the vicinity of the release site, increased petroleum hydrocarbon (PHC) concentrations have been observed at extraction well SVE-27 in the Public Works Yard (see **Table 8**), and increased gasoline-range hydrocarbons have been observed at VMP-12 and VMP-16 (see **Table 6** and **Appendix B**), and groundwater monitoring well P-66 on WRR Main Property (see Interim Groundwater Monitoring Program – 2nd Quarter 2024 Report; AECOM, 2024a). The approximate location of the release is shown on **Figures 2, 4, 5, 7 to 9, and 11**. In May 2022 AECOM began collecting monthly Tedlar® samples at VMP-16 during SVE effectiveness monitoring, and the results of these samples are included in **Table 9**. Effective March 2024, AECOM discontinued monthly sampling at VMP-16. Quarterly sampling at VMP-16 will continue in accordance with IEPA requirements.

5 Soil Vapor Extraction System Monitoring

As requested in IEPA's September 13, 2012 letter (IEPA, 2012), this section addresses operation of the SVE system. As such, the discussion in this section will address operation of the SVE system during 2Q24. SVE system history is further discussed in **Appendix A**.

5.1 SVE System Operations

The removal of hydrocarbons at the Investigation Area has continued due to daily operation of the SVE system. Natural gas continues to be used as a supplemental fuel for the RTO. Trends related to hydrocarbon concentrations monitored in the field are expected to continue, and these numbers are expected to improve as the system is operated and/or optimized.

5.2 SVE Maintenance Activities and Modifications

Scheduled system maintenance was performed as outlined in the manufacturers' suggested operations and maintenance (O&M) documents in the SVE Operations and Maintenance Plan – WRB Refining LP, Wood River Refinery & Roxana Public Works Site (AECOM, 2021). The scheduled maintenance includes routine lubrication, inspection of belts, oil levels, and emergency cutoffs, along with water levels and associated switches with the VLS units. The SVE system is shut down during periods of maintenance as a safety precaution. Timing and frequency of maintenance activities is dependent on the specific item. Checking and cleaning of filters and components exposed to dirt and/or the elements were performed as part of a routine weekly inspection. System SVE wells and associated vault inspections were also conducted on a monthly basis. The filters associated with the different system components are changed, as needed.

A chronology of maintenance and operation activities associated with the system during 2Q24 can be found in **Appendix C.**

Activities associated with system maintenance, modifications, and testing were appropriately documented both in the field maintenance log maintained on-site and, in the office central (electronic) file.

Steam Enhanced Extraction (SEE) System

The Former Public Works Yard SEE System began partial operation in 2Q24. Steam injection did not begin in 2Q24. On June 12, 2024 the SVE wells on the Public Works (Teal) header line, SVE-20, SVE-24 and SVE-27, were closed to allow for increased flow to the RTO from SEE system extraction wells, and so that existing SVE wells in the vicinity would not interfere with SEE extraction wells. On the same day vapor from the SEE system began flowing to the RTO for destruction. During 2Q24 SEE system operation was not continuous due to troubleshooting of various system components. The majority of information regarding the SEE system will be included in the construction completion report and in monthly progress reports. Some SEE system information will be included in the quarterly SV-SVE reports when applicable and in relation to the routine contents of the quarterly reports.

5.3 SVE System Monitoring Results

The results of field screening samples collected during monthly effectiveness monitoring of the SVE wells and VMPs can be found in **Tables 8 and 9**, respectively. The results of the header and RTO exhaust analytical data can be found in **Table 10**. The data required pursuant to Condition Number 11 of the September 13, 2012 letter are contained in those tables.

SVE Well & VMP Tedlar® Sampling Details:

SVE and VMP well locations sampled during 2Q24 (listed below) are shown on **Figure 11**.

- SVE wells operating during at least one effectiveness monitoring event in 2Q24 were:
  - SVE-20, SVE-28, SVE-30 through SVE-33, SVE-37 and SVE-39 located on WRR North Property.
  - SVE-24 and SVE-27 located in the Roxana Public Works Yard.
  - SVE-3R, SVE-45 and SVE-47 located in the Village.
  - Samples were collected from all operating SVE wells during 2Q24 effectiveness monitoring events.
- Forty-nine VMP locations were sampled monthly during 2Q24 with one duplicate sample taken per twenty samples.
  - VMP-1 through VMP-7, VMP-9, VMP-18, VMP-19, VMP-32, VMP-42, VMP-43, VMP-45, VMP-47 through VMP-54, VMP-56, and VMP-62 through VMP-64 are located in the Village.
  - VMP-12, VMP-33 through VMP-39, VMP-46, VMP-57 through VMP-61, and VMP-65 are located on WRR North Property.
  - VMP-16 is located on WRR Main Property.
  - VMP-10, VMP-11, VMP-13, VMP-14, VMP-17, and VMP-41 are located in the Roxana Public Works Yard.
  - VMP-55 is located on an IDOT right-of-way west of the Roxana Public Works Yard.

With the exception of VMP-3, VMP-17, VMP-18, and VMP-19, VMP locations contain either 3 or 4 screen depths between 5 feet and 42 feet bgs. Location VMP-3 contains 5 screen depths, and locations VMP-17, VMP-18, and VMP-19 contain only one. VMP depths are provided in **Table 2**. The April, May and June 2024 Monthly SVE Effectiveness Monitoring events were the 147th, 148th and 149th monthly SVE & VMP sampling events, respectively, performed since monthly monitoring began in 1st Quarter 2012.

SVE System Monitoring Results:

- Natural gas is used as supplemental fuel for the RTO. See hydrocarbon mass removal calculation discussion details in **Section 5.4**.
- Vacuum measurements are collected monthly at the operating SVE wells and selected VMPs within the Village and WRR. Vacuum influence from the SVE system has been observed at VMP locations along the WFL and in the Roxana Public Works Yard. Vacuum data can be found in **Tables 8 and 9**.
- Air flow data collected from each operating SVE leg located at the RTO were obtained and can be found in **Appendix D**.
- WFL and PW header concentrations and mass removal increased in 2Q24 compared to 1Q24. For the purposes of this report, the mass contribution from PWY SEE system vapor extraction was included in the total for the PW header, although it should be noted that the SEE vapor does not pass through the PW header and is integrated into the SVE system downstream of the PW header. System downtime and hydrocarbon mass removal calculation discussion details in **Section 5.4**.
- During 2Q24, LNAPL was observed in SVE-45. The screened interval for this location was installed in the vadose zone above the groundwater table. During 2Q24 no LNAPL was recovered from SVE-45 because LNAPL thickness was below the recovery criterion.

5.4 SVE System Operation Evaluation

April			May			June		
Total Time	Total Uptime	Percentage Uptime	Total Time	Total Uptime	Percentage Uptime	Total Time	Total Uptime	Percentage Uptime
720 hours	693.45 hours	96.31%	744 hours	701.26 hours	94.26%	720 hours	672.26 hours	93.37%

During 2Q24 the SVE system experienced six periods of unplanned downtime:

- April 19, 2024, the system shut down due to a power outage. Total downtime was 6 hours and 27 minutes.
- April 23-24, 2024, the system shut down due to a variable frequency drive (VFD) alarm. Total down time was 18 hours and 15 minutes.
- May 26-28, 2024, the system was shut down due to a power outage and inclement weather. System was not restarted on May 27 due to Memorial Day holiday. Total downtime was 39 hours and 25 minutes.
- June 3, 2024, the system shut down due to a power outage. Total downtime was 1 hour and 52 minutes.
- June 15, 2024, the system shut down due to a VFD alarm. Total down time was 6 hours and 45 minutes.
- June 23-24, 2024, the system shut down due to a VFD alarm. Total down time was 24 hours and 51 minutes.

The remainder of downtime in 2Q24 was associated with routine (planned) maintenance activities. A summary table of system downtime by date for 2Q24 and the maintenance log can be found in **Appendix C**.

Due to changing system and environmental conditions, the amount of water introduced into the system varies and can accumulate in the piping which can inhibit air flow. Because water accumulates in the system piping, a periodic "sweeping" of the lines is required to purge the piping of accumulated water. By opening the well cap at the extraction well, ambient air is introduced to the piping at a high rate of flow forcing the water through the piping and sweeping it into the VLS units.

The three supplementary dilution lines associated with the system intake are typically closed. The manual dilution valve is also typically adjusted in small increments (usually <5%) and the system is closely monitored following system adjustments. SVE System blower speed was adjusted during 2Q24. Blower speed adjustments, manual dilution valve adjustments, and supplemental dilution utilization are noted in **Appendix C**.

Hydrocarbon Mass Removal

The total hydrocarbon mass of soil vapor removed by the SVE system was estimated by measuring the total hydrocarbon concentrations of the extracted soil vapors and the soil vapor flow rates into the SVE system. The results of the header and RTO exhaust analytical data can be found in **Table 10**. An FID calibrated with methane gas was used to measure total hydrocarbon concentrations in samples collected from the WFL Header and the Public Works Header. Total header hydrocarbon concentrations are included in **Appendix E**.

Total soil vapor flow rates were determined by calculating flow rates for the individual SVE legs that carry vapors from the SVE wells to the treatment system. Pressure, differential pressure, and temperature were measured in each leg. This data and Equation 2.7 and Equation 2.8 from USEPA Test Method 2 "Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)" (Method 2) were used to calculate flow rates for each leg[3]. The flow rates for the appropriate legs were summed to determine flow rates in the WFL Header and the Public Works Header. Flow

[3] USEPA Method 2 "Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)" specifies that a default pitot tube coefficient of 0.99 shall be used to calculate flow if the coefficient is unknown and the tube is designed according to the criteria of Sections 6.7.1 to 6.7.5 of this method. During the 2nd Quarter 2013 (2Q13), a review of the calculation was performed, and it was noted that a 0.67 coefficient should be used for the specific pitot tubes used to collect data at the site. AECOM has corrected the previously calculated mass removal to reflect the 0.67 pitot tube coefficient.

rates are included in **Appendix F**. Only flow rates and concentrations samples taken on the same day were used to calculate mass removal.

Hydrocarbon mass removed for the period between each concentration sample was calculated using the following equation:

$$M_{THC} = Q \times 60 \times \varphi \times \frac{M_c}{385.1 \times 10^6} \times h \div 2000$$

$Where$:

$M_{THC} = Hydrocarbon\ mass\ removed\ for\ the\ period\ (tons)$

$Q = Total\ header\ flowrate\ (SCFM)$

$\varphi = Total\ hydrocarbon\ concentration\ (ppmv)$

$M_C = Molecular\ weight\ of\ total\ hydrocarbons\ \left({}^{lb}/_{lb-mole}\right)$

$h = Period\ SVE\ operating\ hours\ (hours)$

$Unit\ conversions$:

$60\ minutes\ per\ hour$

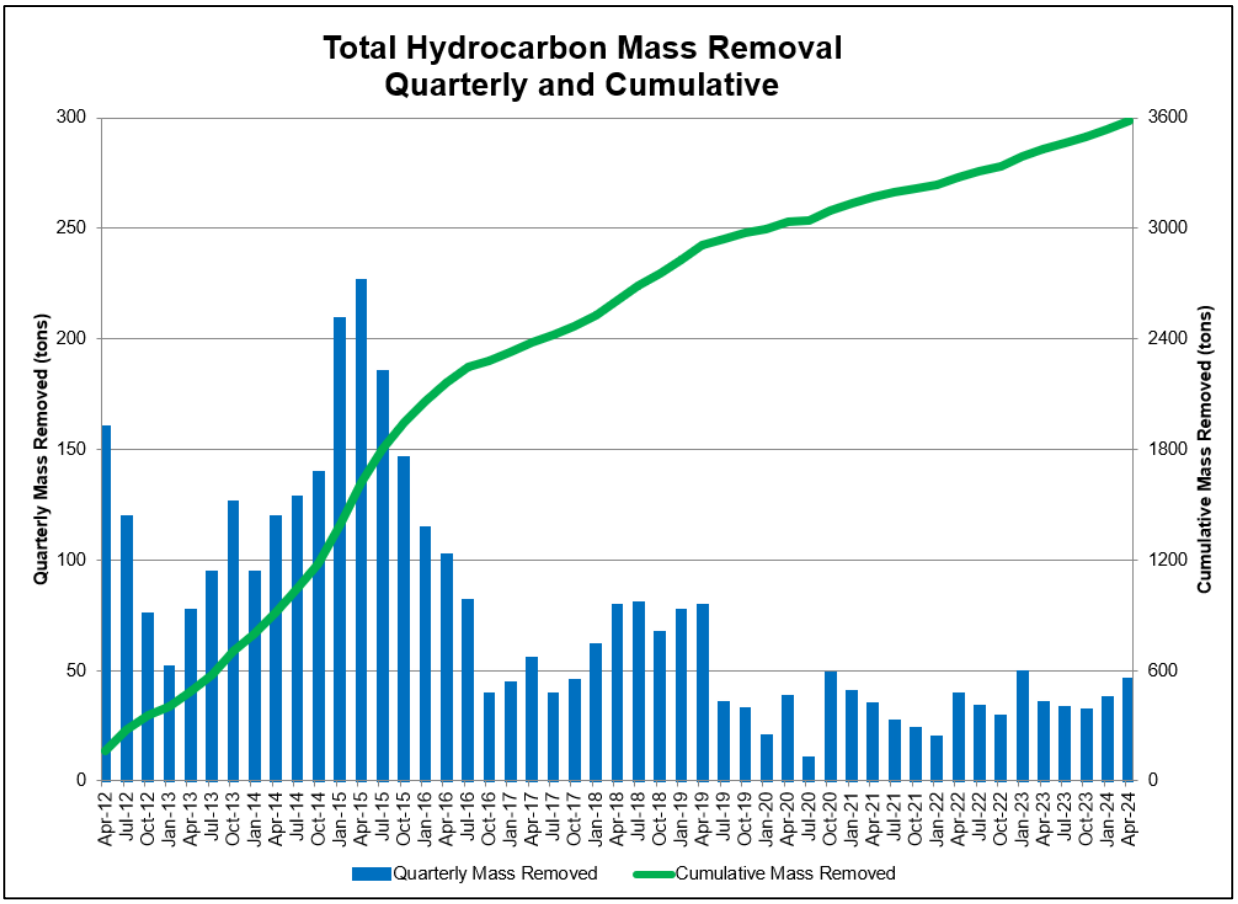
$\frac{M_c}{385.1 \times 10^6}\ converts\ (ppmv) to\ \left({}^{lb}/_{SCF}\right)$

$2000\ pounds\ per\ tons$

Header analytical results from **Table 10** were used to estimate vapor molecular weights in the WFL and Public Works headers. Based on the soil vapor analytical results of the WFL and Public Works header samples, the calculated molecular weights for this reporting period, 22.2 lb/lb-mole and 18.8 lb/lb-mole for the WFL and Public Works headers, respectively, were used to convert header hydrocarbon volume concentrations (ppmv) to mass concentrations (lb/SCF) in 2Q24.

For the purposes of this report, the contribution from SEE system vapor mass removal was included in the total for Public Works, although it should be noted that the SEE vapor does not pass through the PW header and is integrated into the SVE system downstream of the PW header.

The molecular weights, which are recalculated every quarter, are the average weight of all samples taken during a given quarter. The conversion from volume concentration (ppmv) to mass concentrations (lb/SCF) was taken from the USEPA document AP-42 Compilation of Air Pollutant Emission Factors, Volume 1: Stationary Point and Area Sources, Fifth Edition, Appendix A (USEPA, 1995). The total hydrocarbon mass removed during each period was summed to determine the quarterly total hydrocarbon mass removed. The mass removed is summarized in the graph and table below.



Quarterly Total Hydrocarbon Mass Removed				
Quarter	West Fenceline Mass (tons)	Public Works Mass (tons)	Quarterly Mass (tons)	Cumulative Mass (tons)
2Q12	124	36	160	160
3Q12	96	23	119	279
4Q12	53	22	75	354
1Q13	39	12	51	405
2Q13	60	17	77	482
3Q13	68	26	94	576
4Q13	89	37	126	702
1Q14	72	22	94	796
2Q14	83	36	119	915
3Q14	94	34	128	1,043
4Q14	106	33	139	1,182
1Q15	167	42	209	1,391
2Q15	174	52	226	1,617
3Q15	137	48	185	1,802
4Q15	111	35	146	1,948
1Q16	91	23	114	2,062
2Q16	78	24	102	2,164
3Q16	57	24	81	2,245
4Q16	32	7	39	2,284
1Q17	38	6	44	2,328
2Q17	51	4	55	2,383
3Q17	33	6	39	2,422
4Q17	33	12	45	2,467
1Q18	36	25	61	2,528
2Q18	54	25	79	2,607
3Q18	59	21	80	2,687
4Q18	50	17	67	2,754
1Q19	52	25	77	2,831
2Q19	69	13	79	2,913
3Q19	31	4	35	2,948
4Q19	25	7	32	2,980
1Q20	15	5	20	3,000
2Q20	32	6	38	3,038
3Q20	8	2	10	3,048
4Q20	18	30	48	3,096
1Q21	22	18	40	3,136
2Q21	22	13	35	3,171
3Q21	17	10	27	3,198
4Q21	15	8	23	3,221
1Q22	15	4	19	3,240
2Q22	29	10	39	3,279
3Q22	23	10	33	3,312
4Q22	20	9	29	3,341
1Q23	39	10	49	3,390
2Q23	25	10	35	3,425
3Q23	18	15	33	3,458
4Q23	19	13	32	3,490
1Q24	25	12	37	3,527
2Q24	29	16[4]	45	3,572

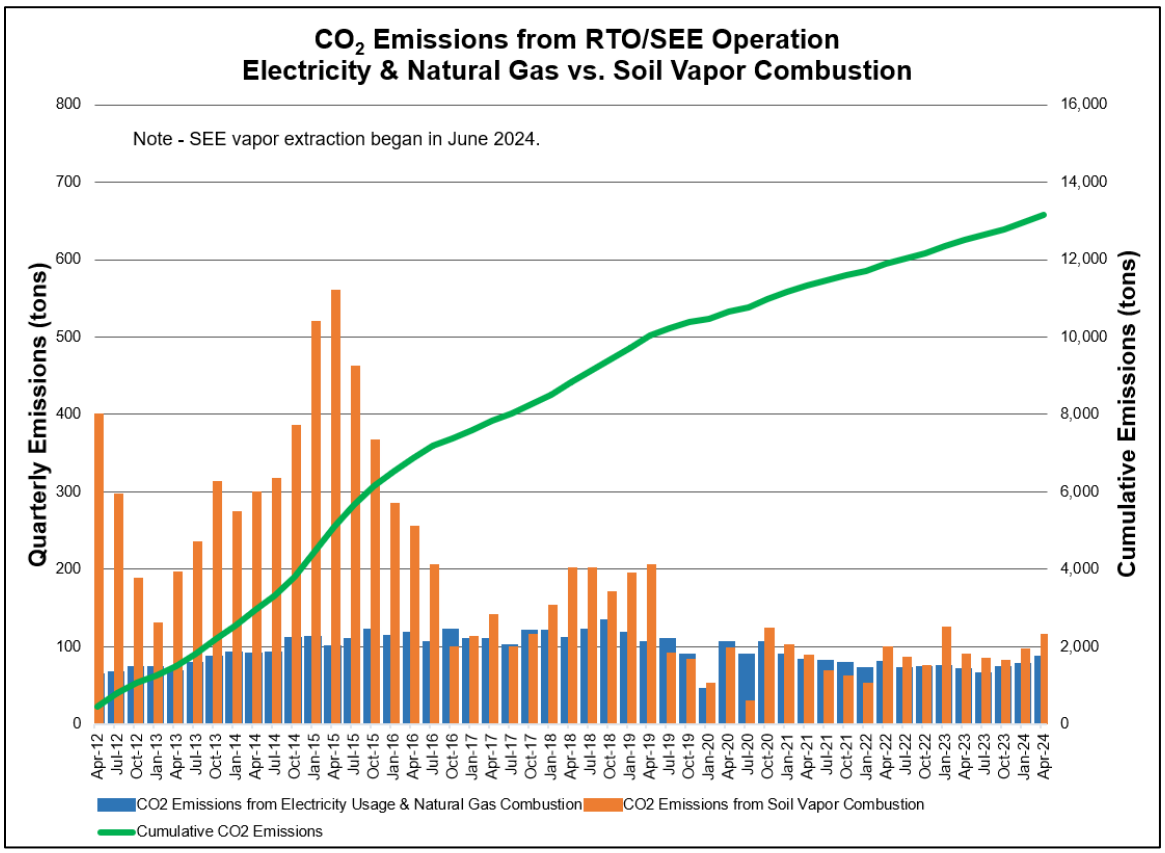
Carbon Footprint

Total carbon dioxide (CO_2) mass emitted from operation of the SVE system RTO and SEE system in 2Q24 was approximately 192.7 tons. Based on a total of 45tons of total hydrocarbons (THC) removed from the subsurface and treated by the RTO, the CO_2 mass emissions rate in 2Q24 was approximately 4.2 tons per ton THC removed.

Total CO_2 emissions are based on the sum of CO_2 mass emitted from the RTO stack and CO_2 mass emitted by the public utility to provide electricity required for RTO operation. The CO_2 mass emitted from the RTO stack is the sum of CO_2 emitted from combustion of extracted soil vapor and supplemental natural gas required for operation.
The breakdown for CO_2 emissions in 2Q24 is as follows:

- 112.8 tons CO_2 from soil vapor combustion
- 32.5 tons CO_2 from combustion of 5,528 therms of supplemental natural gas[5]
- 47.4 tons CO_2 from 89,557 kWh of electricity assuming 0.480 metric tons (0.529 tons) CO_2 emitted per Net MWh (Ameren, 2024)
- **192.7 tons CO_2 Total**

Total CO_2 emissions resulting from operation of the SVE and SEE systems in 2Q24 are equivalent to annual CO_2 emissions due to energy use of 21.1 average American households[6]. Historical quarterly and cumulative CO_2 emissions are depicted in the graph below.



[4] Contribution from SEE system vapor mass removal included in the Public Works quarterly total.
[5] US Environmental Protection Agency (USEPA), July 1998; (USEPA, 1998); AP-42 Compilation of Air Emissions Factors, Volume 1, Chapter 1: External Combustion Sources, Table 1.4-2, Fifth Edition, Supplement D.
[6] Based on annual emissions of 8.3 metric tons of CO_2 associated with the energy use of an average American household (USEPA, 2021).

5.5 SVE System Modification Recommendations

A key focus of the system operators is public and worker safety. Operation of the SVE system will continue with maintenance and system optimization activities. Future monitoring and sampling results from data points associated with the SVE system will be the primary driver of optimization efforts. Optimization efforts could include reduction in dilution air, blower speed adjustment, valve adjustment of individual SVE wells and legs of the SVE system to direct more vacuum to areas with higher hydrocarbon concentrations.

6 Conclusions

AECOM conducted the 2Q24 soil vapor sampling and SVE monitoring efforts on behalf of Shell in the Village, Roxana Public Works Yard, and adjoining portions of the WRR. The following conclusions are based on the data collected during 2Q24:

- Soil vapor samples were collected from 43 locations and 147 ports in the Village, Public Works Yard, and WRR during 2Q24. Due to subsurface water conditions, 10 ports were submerged or within the capillary fringe soil layer and were not sampled.
    - One sample exceeded the benzene residential screening criterion (0.37 mg/m^3) in the Village, at VMP-56 (38.5 ft bgs). Benzene concentrations ranged from an estimated 0.00092 mg/m^3 to an estimated 0.0064 mg/m^3, with one outlier result of 42 mg/m^3 (VMP-56-38.5).
    - No sample results exceeded the benzene commercial/industrial screening criterion (2.8 mg/m^3) in the Public Works Yard or the area along Illinois Route 111 and Rand Avenue. Benzene concentrations ranged from an estimated 0.0013 mg/m^3 to an estimated 0.0021 mg/m^3.
    - Sample results exceeded the benzene commercial/industrial screening criterion (2.8 mg/m^3) in the WRR at VMP-12 (39 ft bgs) and VMP-16 (13.5, 19 and 31 ft bgs). Benzene concentrations ranged from 7.9 mg/m^3 to 330 mg/m^3.
- The 2Q24 soil vapor sampling event was the 56th quarterly sampling event performed since the IEPA requirement for quarterly soil vapor sampling began in 3rd Quarter 2010.
- The April, May and June 2024 Monthly SVE Effectiveness Monitoring events were the 147th, 148th and 149th monthly SVE & VMP sampling events, respectively, performed since monthly monitoring began in 1st Quarter 2012.
- Soil vapor concentrations of petroleum hydrocarbons in the Village have been below Tier 1 criteria from 5 to 30 ft bgs since 1st Quarter 2017.
- Increased PHC concentrations at SVE-27 and increased gasoline-range hydrocarbons at VMP-12 and VMP-16 have been observed in the vicinity of a Buckeye Partners LP pipeline gasoline release (see **Section 4.3**).
- As presented in detail in this report, the SVE system continues to operate with supplemental fuel and has been effective. SVE System operations continue to focus on the Fourth & Chaffer and Public Works Yard areas, in alignment with the IEPA letter dated October 1, 2020 (Log No. B-43R-CA-95, CA-98).
- Assessment of SVE system operations with a focus on Sustainability continued during 2Q24. Preliminary carbon footprint analysis indicates that operating the SVE system in 2Q24, including the contribution from electricity generation, resulted in the emissions of approximately 192.7 tons of CO_2, compared to 45 tons of THC removed from the subsurface.

NOTES:

1) Elevations presented in this table are relative to the 1988 NAVD datum.

2) The corrected water level elevations presented in this table were corrected by a specific gravity of 0.80 for the wells in which LNAPL was identified.

3) PID values measured with a 10.6 electron volt (eV) lamp photoionization detector.

4) btoc = Below Top of Casing; ppm = parts per million; NA = Not Applicable; NE = Not Encountered; NM = Not Measured

5) * Indicates that the LNAPL and/or water level is above the top of the screened zone of the well.

6) Table includes comprehensive groundwater monitoring well gauging data for the last 4 quarters from the combined Village of Roxana Interim Groundwater Monitoring Program and the WRB Refining LP Wood River Refinery Program.

7) The screened interval for certain monitoring wells was adjusted based on an evaluation of the results of annual bottom depth gauging conducted in the first quarter of each year.

8) Top of casing and screened interval for the groundwater monitoring wells in the Roxana Interim Groundwater Monitoring Program and the WRR Program were adjusted based on surveying conducted in 2Q19, in accordance with Permit Condition IV.J.9, which requires wells be surveyed every five (5) years.

Notes:
1. OVR is used to indicate a reading over range for the FID, PID, or Landtec.
2. N/A is used to indicate that a reading was not collected because it was unnecessary (i.e., CH_4 on Tedlar® Bag 1 if helium in Bag was minimal).
3. NM is used to indicate that a reading was not measured.
4. NS is used to indicate that a reading was not collected because the port could not be sampled.
5. FID readings were taken with a TVA-2020. When oxygen concentrations were <14%, or when the sample put the flame out, a dilution tip was used when analyzing samples with the FID.
   The dilution tip introduces ambient air in a 10:1 ratio to the sample, which requires the sample readings to be multiplied by 10 to get the actual value.
   The FID readings in this table illustrate the actual FID values that were represented in each sample.
6. Negative readings on the FID are recorded as zero.
7. VMP not sampled due to port integrity.
8. VMP not sampled because screen submerged below water table, capillary fringe, or a temporary water condition.
9. VMP re-sampled due to elevated helium readings (>10% of shroud) in canister at the laboratory.
10. VMP not sampled because vehicle was consistently parked on well vault.
11. VMP re-sampled due to anomalous results in the initial sample.
12. VMP re-sampled due to issues with the canister after arriving at the laboratory.

TABLE 4
SOIL VAPOR SCREENING CRITERIA

Chemical	Residential (mg/m^3)	Industrial/ Commercial (mg/m^3)
TO-15 Analytes		
Acetone	750,000	750,000
Benzene	0.37	2.8
Bromodichloromethane	450,000	450,000
Bromoform	11.0	52.0
Bromomethane	6.9	42.0
1,3-Butadiene		
2-Butanone	6,400	40,000
Carbon disulfide	780	5,300
Carbon tetrachloride	0.21	1.5
Chlorobenzene	69.0	420
Chlorodibromomethane	57,000	57,000
Chloroethane		
Chloroform	0.11	0.92
Chloromethane		
Allyl chloride (3-Chloropropene)		
alpha-Chlorotoluene		
Cyclohexane		
1,2-Dibromo-3-chloropropane (DBCP)	0.0012	0.0062
1,2-Dibromoethane (EDB)	0.0078	0.048
1,2-Dichlorobenzene	290	1,700
1,3-Dichlorobenzene		
1,4-Dichlorobenzene	1,200	6,800
Dichlorodifluoromethane (Freon 12)	270	1,700
1,1-Dichloroethane	690	4,200
1,2-Dichloroethane	0.099	0.81
1,1-Dichloroethene	240	1,600
cis-1,2-Dichloroethene	1,100,000	1,100,000
trans-1,2-Dichloroethene	85.0	510
Dichloromethane (Methylene chloride)	5.6	45.0
1,2-Dichloropropane	0.31	2.3
cis-1,3-Dichloropropene	0.9	6.2
trans-1,3-Dichloropropene	0.9	6.2
1,4-Dioxane	0.22	2.3
Ethanol		
Ethylbenzene	1.3	9.3
4-Ethyltoluene		
Freon 113		
Freon 114		
Heptane		
Hexachlorobutadiene		
Hexane		
2-Hexanone (Methyl N-Butyl Ketone)		
Isopropylbenzene (Cumene)	600	3,500
4-Methyl-2-pentanone (Methyl Isobutyl Ketone)		
Methyl tert-Butyl Ether (MTBE)	3,700	24,000
n-Propylbenzene		
2-Propanol		
Styrene	1,400	8,500
Tetrachloroethene	0.55	4.0
1,1,2,2-Tetrachloroethane		
Tetrahydrofuran		
Toluene	6,200	40,000
1,2,4-Trichlorobenzene	5.4	25.0
Trichloroethene	1.5	12.0
1,1,1-Trichloroethane (Methyl chloroform)	6,600	41,000
1,1,2-Trichloroethane	170,000	170,000
Trichloroflouromethane (Freon 11)	860	5,600
1,2,4-Trimethylbenzene		
1,3,5-Trimethylbenzene		
2,2,4-Trimethylpentane		
Vinyl chloride	0.29	4.8
Xylenes (total)	140	840
m,p-Xylene	130	820
o-Xylenes	120	790

Note:

1. Screening criteria source: Illinois Pollution Control Board, Tiered Approach to Corrective Action (TACO) Title 35 - Subtitle G; Chapter I, Subchapter f; Part 742; Appendix B, Table H: Tier 1 Indoor Inhalation Remediation Objectives for Residential and Industrial/Commercial Properties for the Diffusion and Advection Exposure Route, July 15, 2013.

2. Blank cells indicate that chemical does not have screening criteria.

Notes:

Analytes shown were detected in at least one location on Table 5 or Table 6 during the current quarter or previous 3 quarters.

Bold results are detections above the reporting limit (RL), or estimated detections between the method detection limit (MDL) and RL.

Yellow highlighted cells indicate detections that exceed residential screening criteria.

Concentrations of chloroform at VMP-54 have increased since the summer of 2020, which coincided with the installation of a pool in the residents' backyard immediately northeast of VMP-54. Increased concentrations of chloroform were not observed at monitoring wells MW-3 or MW-4, which are to the west and east, respectively, of VMP-54. Chloroform is a common disinfectant byproduct in municipal water, and can be present in higher concentrations in chlorinated pool water.

Lab Qualifiers

J = Estimated value; results between the MDL and RL

U = Compound analyzed for but not detected above the RL

AECOM Qualifiers

J = Estimated detection

UJ = Estimated non-detect

U = Non-detect due to blank contamination

Notes:

Analytes shown were detected in at least one location on Table 5 or Table 6 during the current quarter or previous 3 quarters.

Bold results are detections above the reporting limit (RL), or estimated detections between the method detection limit (MDL) and RL.

Yellow highlighted cells indicate detections that exceed industrial screening criteria.

In November 2020 a gasoline release was discovered at a pipeline owned and operated by Buckeye Partners LP.
In the vicinity of the release site, increased petroleum concentrations have been observed at VMP-12 and VMP-16, and groundwater monitoring well P-66, which are in the WRR.

Lab Qualifiers

J = Estimated value; results between the MDL and RL
U = Compound analyzed for but not detected above the RL

AECOM Qualifiers

J = Estimated detection
UJ = Estimated non-detect
U = Non-detect due to blank contamination

Notes:
Bold results are detections above the reporting limit (RL), or estimated detections between the method detection limit (MDL) and RL.

Lab Qualifiers
J = Estimated value; results between the MDL and RL
U = Compound analyzed for but not detected above the RL

AECOM Qualifiers
J = Estimated detection
U = Non-detect due to blank contamination

Notes:

Analytes shown were detected in at least one sample on Table 10 during the current quarter or previous 3 quarters.

Bold results are detections above the RL, or estimated detections between the MDL and RL.

Lab Qualifiers

J = Estimated value; results between the MDL and RL
U = Compound analyzed for but not detected above the RL
E = Exceeds instrument calibration range
CN = Indicates potential high bias due to use of Tedlar© bag for off-line dilution

AECOM Qualifiers

J = Estimated detection
UJ = Estimated non-detect
U = Non-detect due to blank contamination

Figures

The following MVS descriptions and assumptions apply to **Figures 7** through **10**:

Plan View Model Output – The data input for the plan view model was not limited by depth and was modeled in three dimensions (3D). The bottom surface of the resulting model was limited to the potentiometric groundwater surface elevation. The two-dimensional (2D) appearance of the figures created from the 3D model was achieved by displaying an aerial view of horizontal slices through the model. The horizontal slices were taken parallel to the ground surface that was created from GPS survey data, rather than at single elevation plane. The result of this is a surface that accurately represents soil vapor concentrations at discreet depths measured from ground surface.

Inward Kriging / Boundary Cut-off – This method of Kriging limits the horizontal extent of data modeling to the extent of the data on the x/y plane in a convex hull. The model is bounded by the VMPs.

Vertical Cut-off – The bottom surface of this model is based on the current quarter's groundwater gauging data collected in Roxana. The groundwater gauging data was used to model a 2D surface that represents the interface between the top surface of groundwater and the bottom surface of soil vapor.

Duplicate Samples – In locations and depths where duplication samples were collected, the higher concentration was used.

Detection Limits – In cases where the lab reported a non-detect, half the value of the lab detection limit was used in the model. This conservative method is based on the assumption that the soil is likely not free of benzene, but the quantity contained is lower than detectable at the analyzed dilution. Data are posted where non-detect.

2Q24 Soil Vapor Port Screen Comparison to Groundwater Elevation

FIG. NO. 4

LEGEND

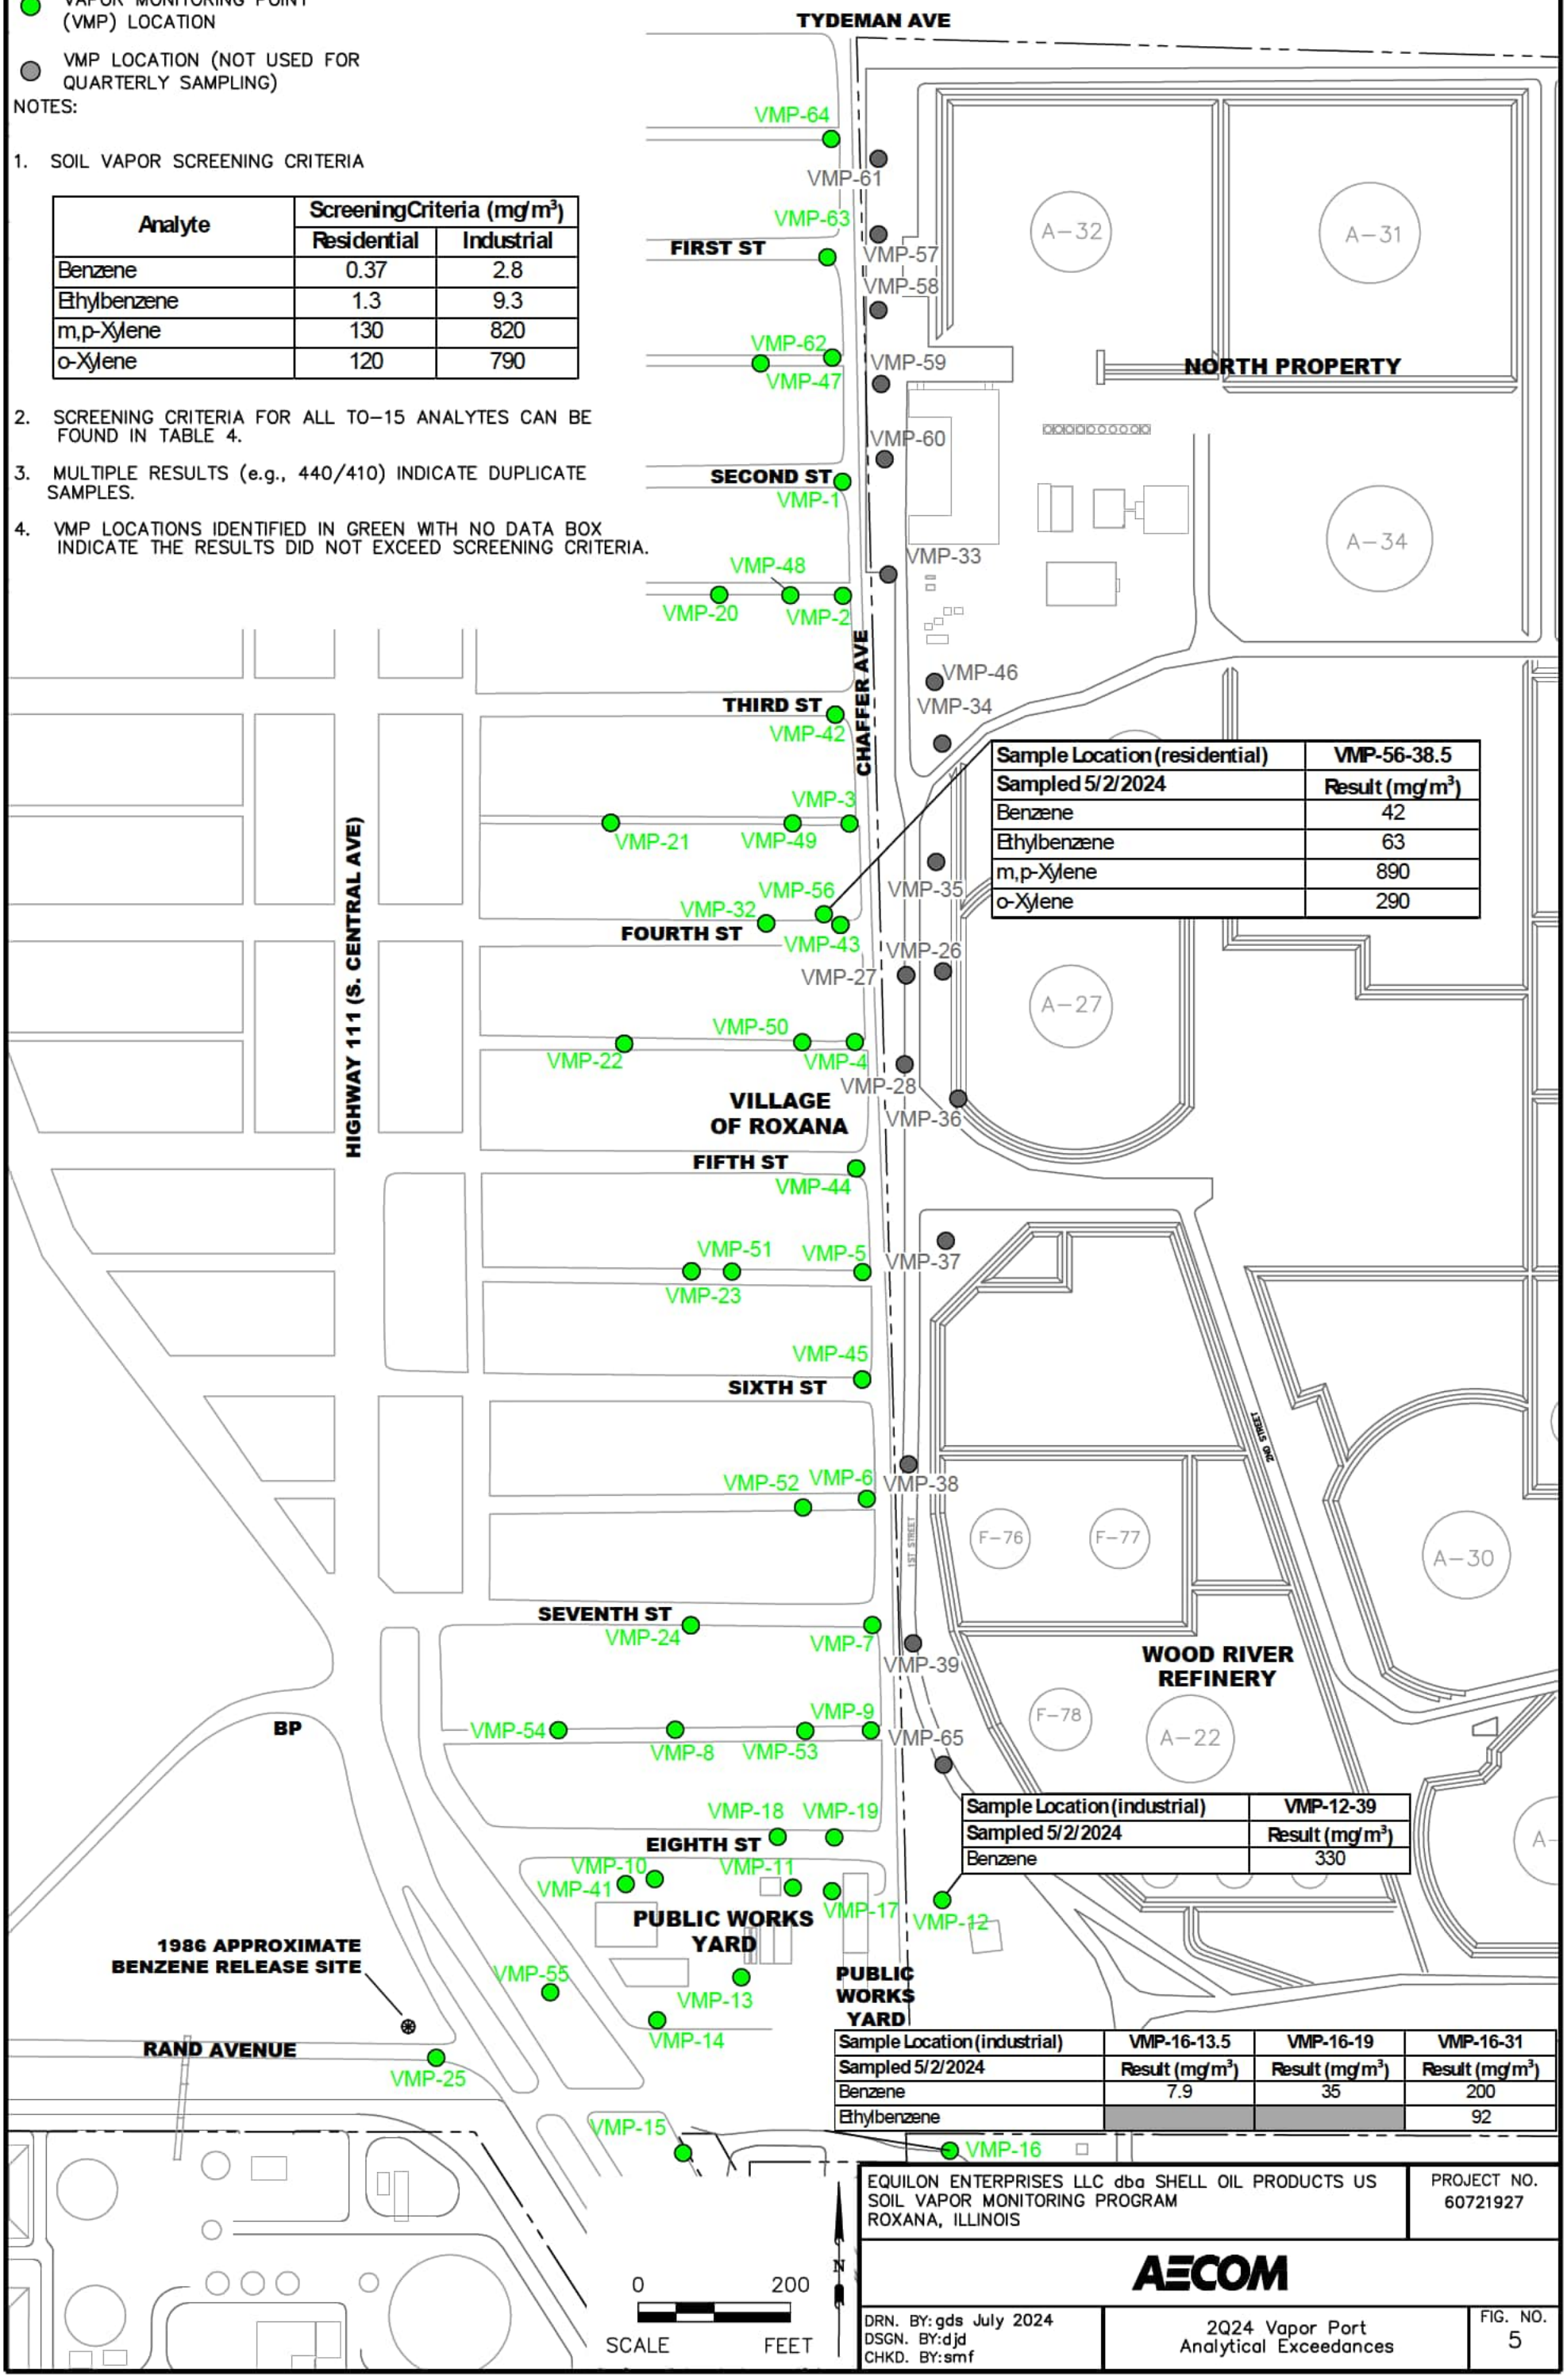
- VAPOR MONITORING POINT (VMP) LOCATION
- VMP LOCATION (NOT USED FOR QUARTERLY SAMPLING)

NOTES:

1. SOIL VAPOR SCREENING CRITERIA

Analyte	Screening Criteria (mg/m³)	
	Residential	Industrial
Benzene	0.37	2.8
Ethylbenzene	1.3	9.3
m,p-Xylene	130	820
o-Xylene	120	790

2. SCREENING CRITERIA FOR ALL TO-15 ANALYTES CAN BE FOUND IN TABLE 4.
3. MULTIPLE RESULTS (e.g., 440/410) INDICATE DUPLICATE SAMPLES.
4. VMP LOCATIONS IDENTIFIED IN GREEN WITH NO DATA BOX INDICATE THE RESULTS DID NOT EXCEED SCREENING CRITERIA.



Sample Location (residential)	VMP-56-38.5
Sampled 5/2/2024	Result (mg/m³)
Benzene	42
Ethylbenzene	63
m,p-Xylene	890
o-Xylene	290

Sample Location (industrial)	VMP-12-39
Sampled 5/2/2024	Result (mg/m³)
Benzene	330

Sample Location (industrial)	VMP-16-13.5	VMP-16-19	VMP-16-31
Sampled 5/2/2024	Result (mg/m³)	Result (mg/m³)	Result (mg/m³)
Benzene	7.9	35	200
Ethylbenzene			92

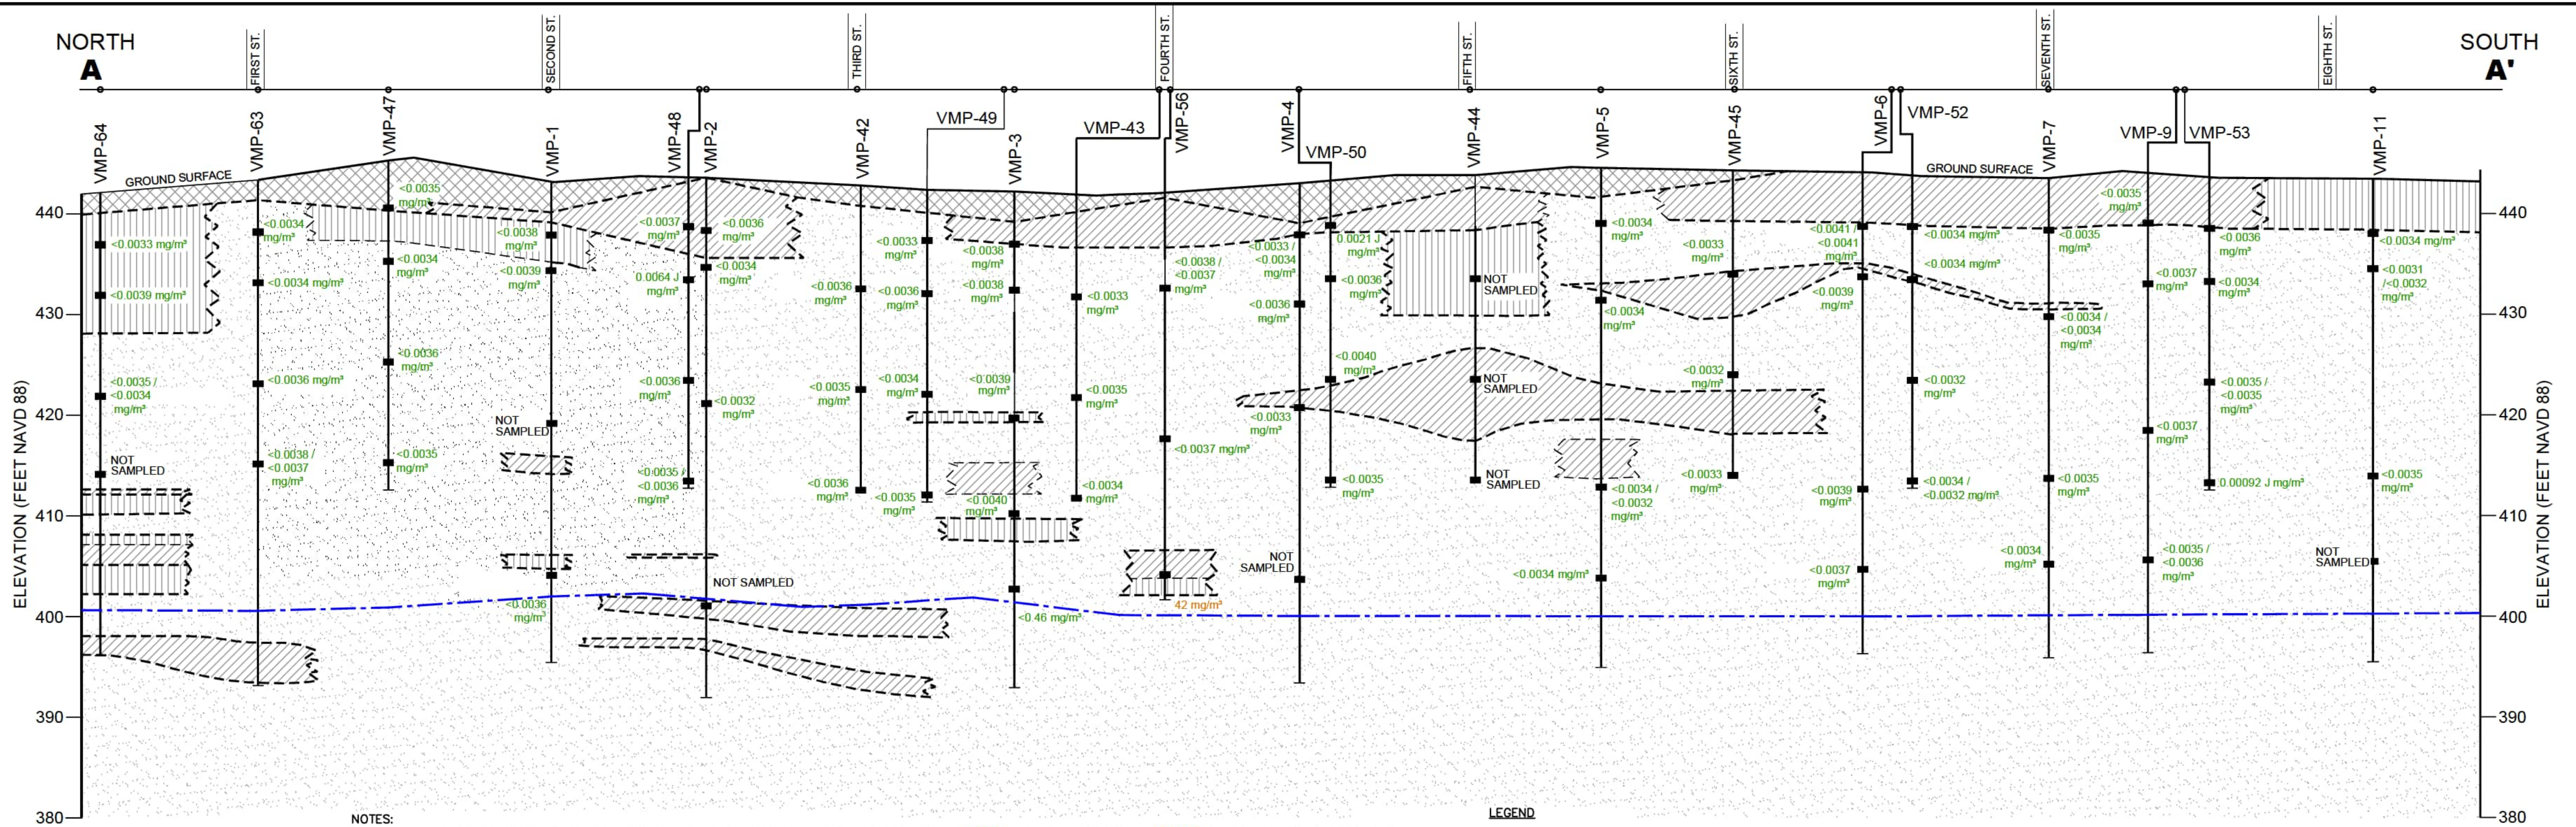
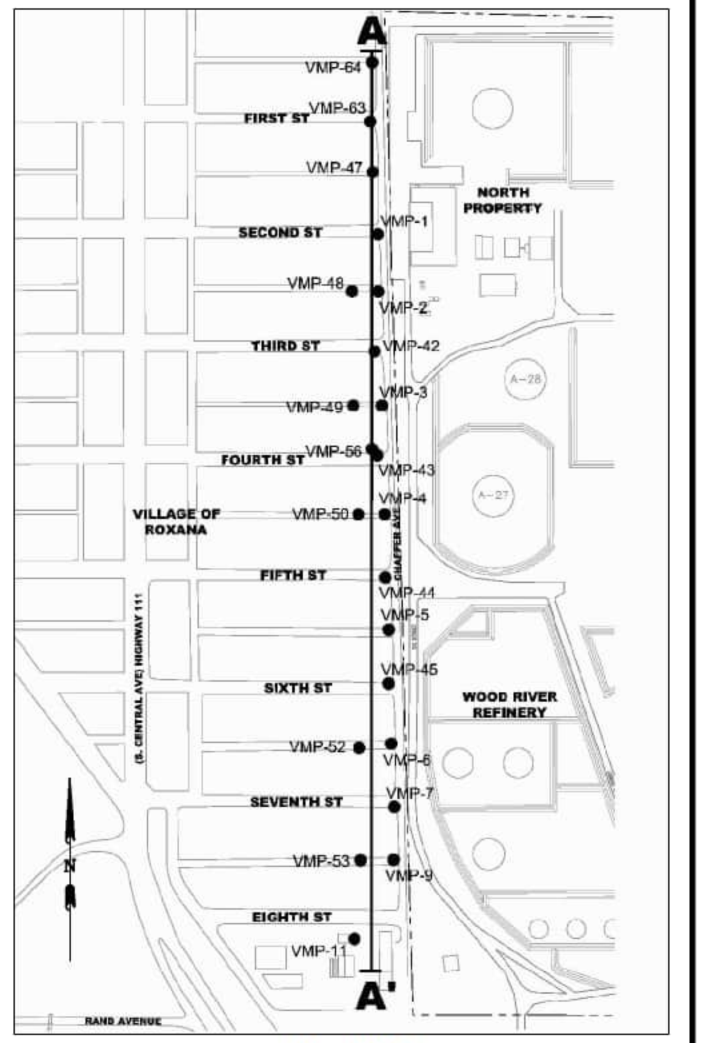
2Q24 Vapor Port Analytical Exceedances

FIG. NO. 5





KEYMAP
NOT TO SCALE

NOTES:

1. SOIL VAPOR BENZENE CONCENTRATIONS FROM THE 3Q23 SAMPLING EVENT ARE DEPICTED IN GREEN. VALUES DEPICTED IN ORANGE EXCEED BENZENE SCREENING CRITERION (0.37 mg/m³ FOR VMP 1–9, 32, AND 42–45, 47–50, 52, 53, 56, 63, AND 64 [RESIDENTIAL] AND 2.8 mg/m³ FOR VMP–11 [COMMERCIAL/INDUSTRIAL]).
2. GROUNDWATER ELEVATIONS SHOWN ON THIS CROSS–SECTION ARE BASED ON GROUNDWATER GAUGING DATA COLLECTED APRIL 1–3, 2024.
3. THIS GEOLOGIC CROSS–SECTION IS PRIMARILY BASED ON THE INTERPRETATION OF CPT DATA AND BORING LOGS DEVELOPED DURING OTHER DRILLING TECHNIQUES (E.G. AUGER AND GEOPROBE) COLLECTED BY AECOM SINCE 2006. LITHOLOGY WAS PROJECTED BETWEEN SUBSURFACE INVESTIGATION POINTS.
4. CROSS–SECTION TRACE LINE SHOWS DISTANCE AND DIRECTION EACH POINT WAS PROJECTED TO CONSTRUCT THIS CROSS–SECTION.
5. VMPs OFFSET FROM CROSS–SECTIONAL LINE (VMP–43, VMP–48, VMP–49, VMP–50, VMP–52, AND VMP–53) ARE INCLUDED TO DISPLAY BENZENE CONCENTRATION DATA ONLY.

LEGEND

FIG. NO. 11

Appendix A
Site Background and Regulatory History

APPENDIX A
SITE BACKGROUND AND REGULATORY HISTORY

Soil Vapor Sampling

Shell has been investigating and delineating soil vapor in the Investigation Area through the installation, development, and sampling of vapor monitoring ports (VMPs). Vapor monitoring locations (VMP-1 through VMP-16) were installed based on a work plan submitted to the Illinois Environmental Protection Agency (IEPA) on behalf of Shell on January 21, 2009. IEPA approved the work plan with conditions on May 12, 2009 (IEPA, 2009). The results of the vapor investigation and delineation efforts were presented in the Dissolved Phase Groundwater Investigation and P-60 Free Phase Product Delineation Report, dated February 18, 2010 (URS, 2010a). Based on recommendations contained in that report, an additional four vapor monitoring ports were installed, developed, and sampled at one existing (VMP-3) and three new vapor monitoring locations (VMP-17 through VMP-19) in the Spring/Summer 2010, with results presented in the Addendum to February 2010 Report – Supplemental Investigation Activities, dated September 20, 2010 (URS, 2010b).

IEPA provided comments to the February 18, 2010 report in a letter to Shell dated August 5, 2010 (IEPA, 2010). In particular, Comment Number 3 required quarterly soil vapor sampling and reporting, and Comment Number 2 described the need to further delineate the extent of soil vapors beneath the area. Six VMPs (VMP-20 through VMP-25) were installed and added to the quarterly sampling program beginning with 1st Quarter 2011 (1Q11).

IEPA provided further comments in a March 16, 2011 letter (IEPA, 2011) to Shell approving the Soil Vapor Extraction (SVE) Pilot Test Work Plan. In particular, Comment Number 2 of the March 16, 2011 letter required that quarterly soil vapor sampling continue at the 25 VMP locations, and Comment Number 9 requested an updated report, including a discussion of the geology, extent of groundwater impact, and distribution of impacted soil vapor. These items/comments were included in the 1Q11 Soil Vapor Report (URS, 2011a) and have been updated for this report.

As a result of a meeting between Shell and the IEPA on February 8, 2012, the quarterly soil vapor sampling program was expanded to include six additional soil VMPs (VMP-31, VMP-32, and VMP-42 through VMP-45). VMP-31 and VMP-32 were installed in 2nd Quarter 2011 (2Q11) to monitor soil vapor during operation of the Internal Combustion Engines (ICE) located near 4th Street and Chaffer Avenue. VMP-42 through VMP-45 were installed during the 3rd Quarter 2011 (3Q11) and 4th Quarter 2011 (4Q11) in conjunction with the SVE System installation to monitor soil vapor concentrations. Monitoring of these VMPs commenced with the 2nd Quarter 2012 (2Q12) sampling event.

Based on a September 13, 2012 letter from the IEPA (IEPA, 2012), VMP-29, VMP-30, and VMP-41, located within the Roxana Public Works Yard, were added to the quarterly sampling program during 3rd Quarter 2012 (3Q12). Additional VMPs (VMP-47 through VMP-55) were installed during the 4th Quarter 2012 (4Q12) in the Village. Monitoring of these VMPs commenced in the 1st Quarter 2013 (1Q13) sampling event.

In 2012, the IEPA additionally requested development of a quarterly report documenting the results of monitoring and remedial efforts associated with operating the SVE system. These results have been added to the subject report.

VMP-62 through VMP-64 were installed during the 4th Quarter 2013 (4Q13) in the Village. Monitoring of these VMPs commenced in the 4Q13 sampling event; however, the results were not obtained in time for inclusion in the 4Q13 report, so those data were included in the 1st Quarter 2014 (1Q14) report.

Based on email correspondence with the IEPA (J. Moore, personal communication to B. Billman, August 2, 2013), the subject reports no longer include copies of the laboratory analytical reports (previously included in appendices). The laboratory reports will continue to be retained in the project files.

The IEPA issued a draft letter on December 26, 2013, finalized on April 9, 2014 (IEPA, 2014), approving certain modifications requested by URS to the subject reports, including the modifications below:

- Tabular data included from the previous year (current quarter and the previous three quarters).
- Charts showing the analytical concentrations of benzene and methane over time.
- Reduction of VMP canister sampling duration from approximately 30 minutes to approximately 5 minutes.

These changes were initiated with the 1Q14 sampling event and have been updated in subsequent reports.

The IEPA issued a letter on May 28, 2015 (IEPA, 2015), approving the corrective action modification requests of two submittals related to the SVE system.

AECOM, on behalf of Shell, submitted "TACO Tier 3 Demonstration Report Part 1: Site Characterization Summary" and "Part 2: Tier 3 Proposal" to the IEPA on April 6, 2017 (AECOM, 2017a; AECOM, 2017b). This submittal was followed by two supplemental documents submitted on July 14, 2017 (AECOM, 2017c), and November 22, 2017 (AECOM, 2017d), respectively. These submittals provided a site characterization summary and a Tier 3 demonstration requesting to shut down the SVE System and initiate a period of rebound monitoring.

During a meeting with IEPA on November 5, 2019, the IEPA requested information regarding the operation of the SVE system, including a description of procedures for opening and closing SVE wells, an overview of SVE system monitoring programs, and a figure depicting operating SVE wells. On November 20, 2019 AECOM provided the requested information via email, including a figure depicting the SVE wells operating as of November 13, 2019.

On October 1, 2020, the IEPA issued a response letter to the 2017 TACO Tier 3 submittals, in which the submittals were neither approved nor denied (IEPA, 2020). Condition 1 of the letter stated that the SVE system must be maintained in areas of concern until groundwater concentrations at monitoring wells within the Village have been reduced to levels consistent with applicable standards. Additional conditions within the letter provided guidance for recalculation of Tier 3 remedial objectives, provided comments on the screening of analytical results, and provided a list of 21 chemicals that may be excluded from further consideration. During a meeting on July 15, 2021, the IEPA provided some clarifications regarding comments in the October 1, 2020 letter.

On January 4, 2022, AECOM, on behalf of Shell, submitted a response to the IEPA's October 1, 2020 letter (AECOM, 2022a). Specific responses to each of the IEPA's comments were included, along with supporting materials.

On March 23, 2022, AECOM, on behalf of Shell, submitted a request to the IEPA asking that the due dates for the quarterly Roxana Soil Vapor Sampling & SVE Monitoring Reports be pushed back two weeks. On July 8, 2022 the IEPA responded with a letter approving the request. Effective beginning with the 2Q22 report, the 1st Quarter report is now due on May 15, the 2nd Quarter report is due August 15, the 3rd Quarter report is due November 15, and the 4th Quarter report is due February 15.

On March 13, 2023, the IEPA issued a letter approving several of AECOM's recent standard operating procedures (SOP) submittals. The letter included conditions that affect some of the SOPs, including the SOP for soil vapor sampling (IEPA, 2023a). On May 26, 2023, AECOM, on behalf of Shell, submitted Standard Operating Procedure (SOP) revisions outlined in the 3/13/2023 IEPA SOP approval letter with comments. The IEPA letter approved several previously submitted SOPs and requested some specific revisions to selected SOPs as well as a new SOP related to Investigative Derived Waste (IDW) management.

SVE System

As presented in the June 2011 Conceptual/Final Design Report (URS, 2011b), the May 2012 SVE System Construction Completion Report (URS, 2012), and the February 2013 SVE System Construction Completion Report Addendum (URS, 2013), URS designed and constructed a SVE system along the WFL and within the Roxana Public Works Yard.

The SVE system consists of 45 SVE wells, 30 of which are located along the WFL, nine are located in the Village along East 4th Street west of Chaffer Avenue, and six are located in the Roxana Public Works Yard. The SVE wells are connected via 4-inch piping to vapor/liquid separators (VLS) and a rotary lobe positive displacement blower housed within a customized intermodal freight container ("conex"). Piping from the SVE wells feeds into the conex, where vapor moves through the VLS, before traveling through the blower and a baffle connected to a Regenerative Thermal Oxidizer (RTO). A system fan located on the RTO side of the baffle pushes the vapor into the RTO and adds fresh air to dilute the vapor stream as necessary.

During 3Q13, URS designed an extension to the northernmost extent of the WFL portion of the SVE system. Five additional SVE wells (SVE wells 37 through 41) and six additional VMPs (VMPs 56 through 61) were installed in August 2013 for extension of the red header line, which was completed in October 2013. All newly installed SVE wells were open and on-

line by November 2013. Details associated with this system extension were documented in the SVE System Construction Completion Report Addendum No. 2, dated January 2014 (URS, 2014). During 3Q14 and 4Q14, AECOM designed and constructed an extension to the WFL portion of the SVE system on Shell-owned properties adjacent to 4th Street and Chaffer Avenue in Roxana, IL. Six additional SVE wells (SVE wells 42 through 47) were brought on-line in November 2014.

The IEPA issued a letter on May 28, 2015 (IEPA, 2015) approving the corrective action modification requests of August 16, 2013, which included activities to study potential enhancement of the existing SVE system near the corner of 4th Street and Chaffer Avenue. The IEPA 2015 letter also approved the March 4, 2015 SVE System Construction Completion Report Addendum No. 3 (URS, 2015).

SEE System

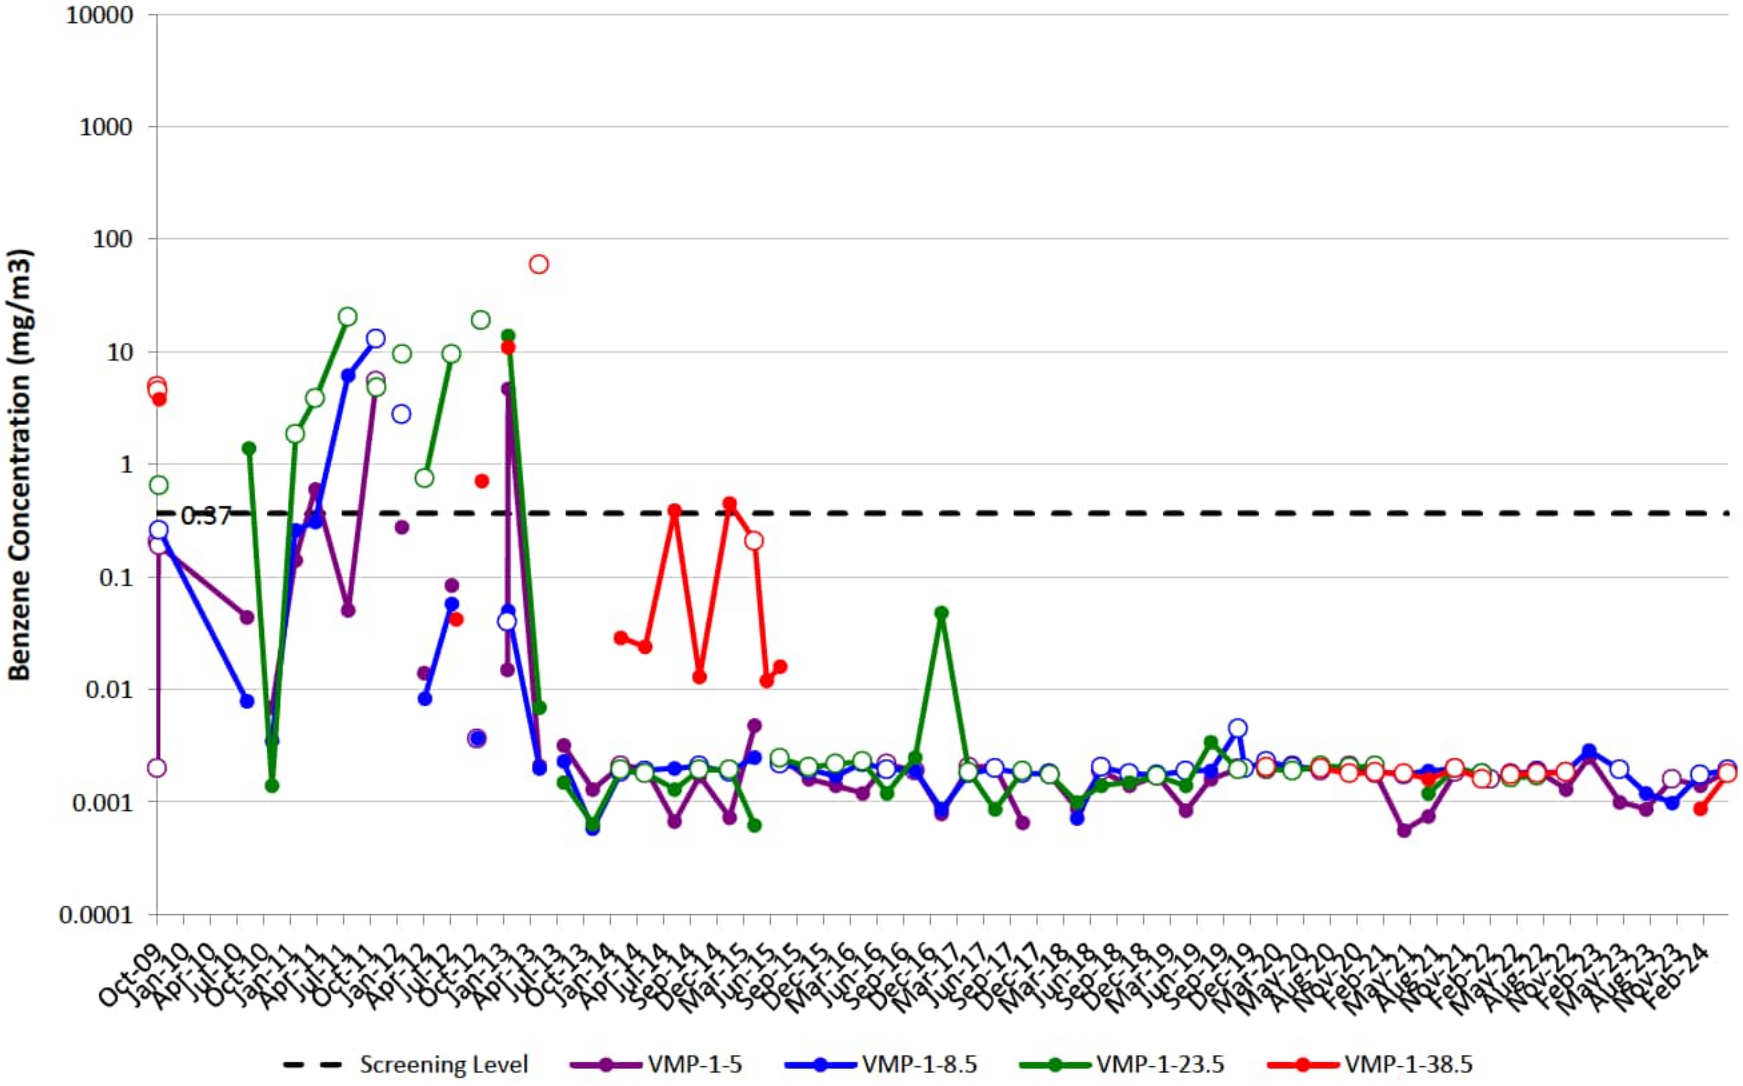
On January 31, 2022, AECOM, on behalf of Shell, submitted the *Public Works Yard Steam Enhanced Extraction Workplan* for Roxana, Illinois (AECOM, 2022b). This workplan described the proposed steam enhanced extraction system for remediation of residual material in the saturated zone at the Roxana Public Works Yard. The IEPA issued a letter on August 22, 2022 (IEPA, 2022) approving steam enhanced extraction technology for use at the Public Works Yard. AECOM and Shell met with IEPA on September 21, 2022 to discuss the 8/22/2022 response letter and the steam enhanced extraction system.

On December 16, 2022, AECOM, on behalf of Shell, submitted the *Old Public Works Yard Steam Enhanced Extraction Final Design Report & Construction Work Plan* (FDRCWP)(AECOM, 2022c). The FDRCWP contained responses to the IEPA's 8/22/2022 letter, as well as items required in Phase II of the IEPA Corrective Measures Program. A letter was issued by the IEPA on May 5, 2023, approving the FDRCWP with monitoring and reporting conditions (IEPA, 2023b). On August 3, 2023, AECOM, on behalf of Shell, submitted a response to the 5/5/2023 IEPA letter (AECOM, 2023a). On September 22, 2023, AECOM on behalf of Shell, submitted the *Former Public Works Yard Steam Enhanced Extraction – Additional Information to Final Design Report and Construction Work Plan (Area C)*(AECOM, 2023b) as a supplement to the FDRCWP. The 9/22/2023 submittal included information on an additional treatment area added to the steam enhanced extraction system, along with other information requested by IEPA. On November 29, 2023, AECOM on behalf of Shell, submitted the *Former Public Works Yard Steam Enhanced Extraction – Additional Information to Final Design Report and Construction Work Plan (SEE System Startup Plan)*(AECOM, 2023c) as a supplement to the FDRCWP. The 11/29/2023 submittal described the anticipated startup schedule of the SEE System. On January 26, 2024 the IEPA issued a letter that conditionally approved the AECOM FPWY SEE-related submittals dated 8/3/2023, 9/22/2023 and 11/29/2023 (IEPA, 2024a). On February 23, 2024 AECOM, on behalf of Shell, submitted a *Former Public Works Yard Steam Enhanced Extraction - Response to 1/26/2024 IEPA Letter* (AECOM, 2024b). On March 4, 2024 AECOM, on behalf of Shell, submitted a *Former Public Works Yard Steam Enhanced Extraction – Pre-SEE Additional Sampling Results* that included sample results that were required by IEPA to be provided prior to SEE startup (AECOM, 2024c). On April 22, 2024 the IEPA issued a letter that conditionally approved the AECOM FPWY SEE-related submittals dated 2/23/2024 and 3/4/2024 (IEPA, 2024b).

Appendix B
Benzene and Methane Charts

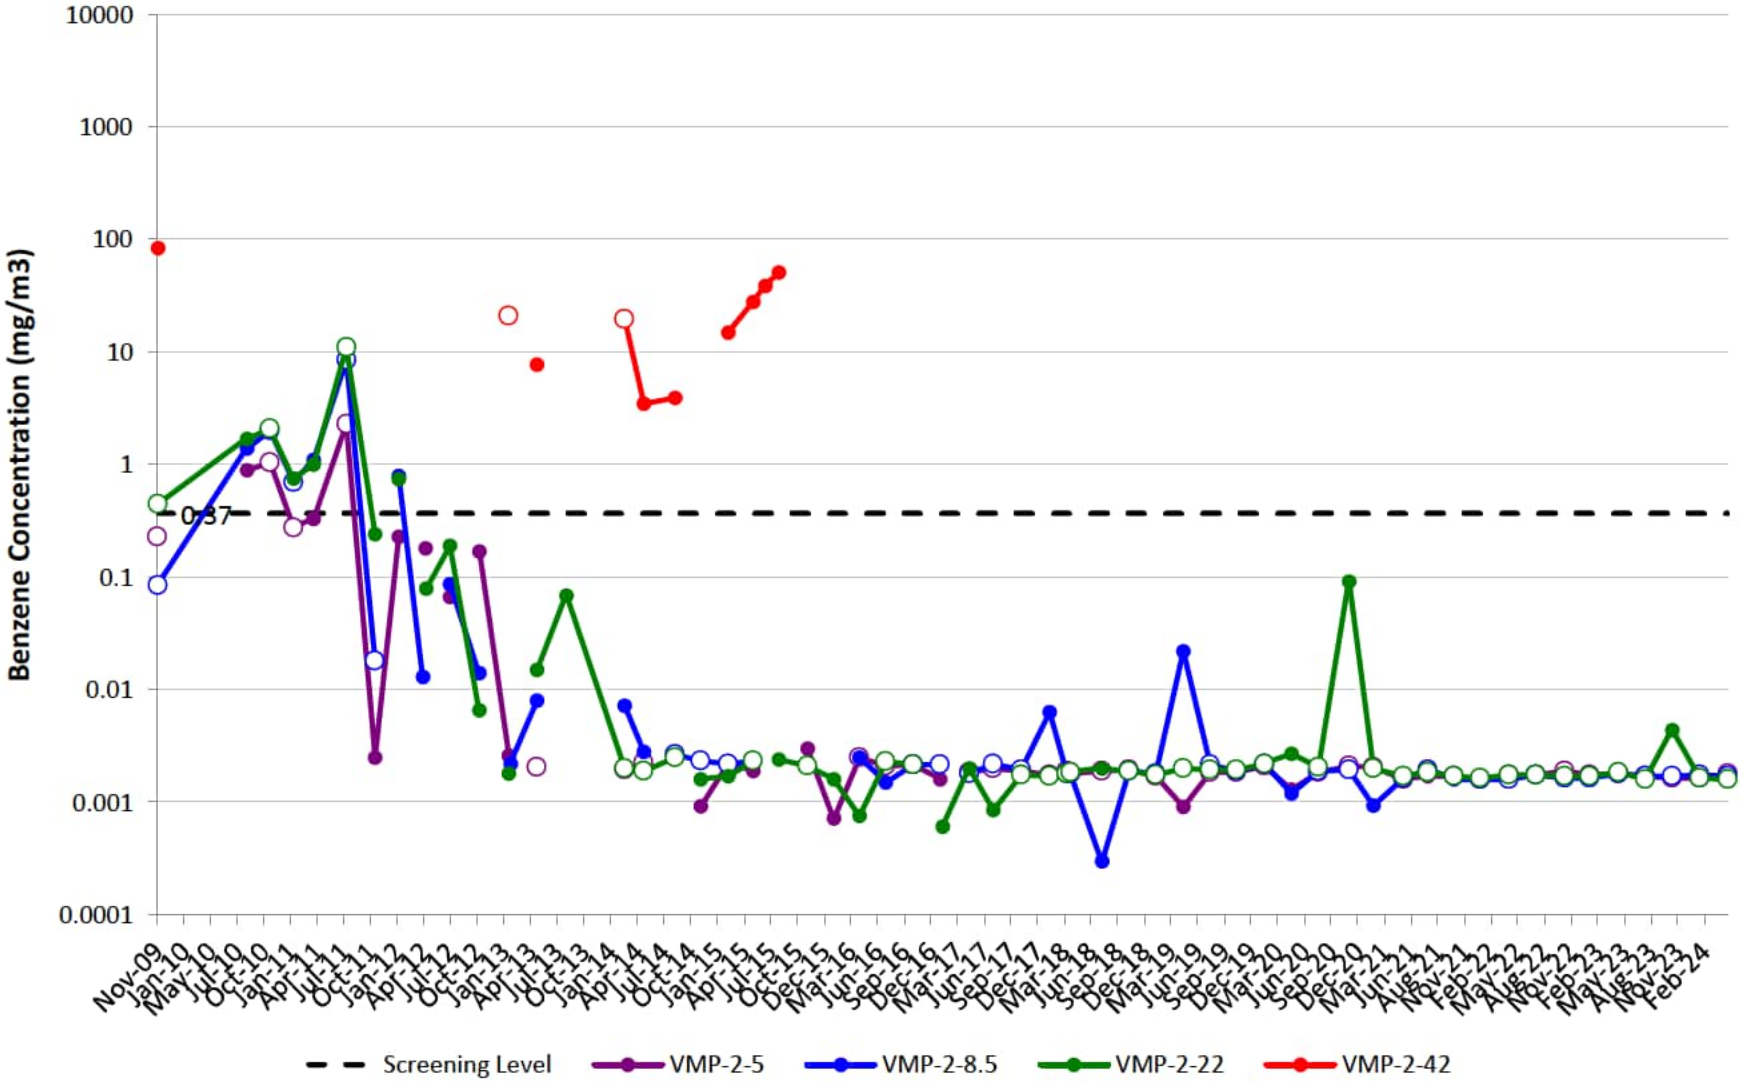
VMP-1

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.



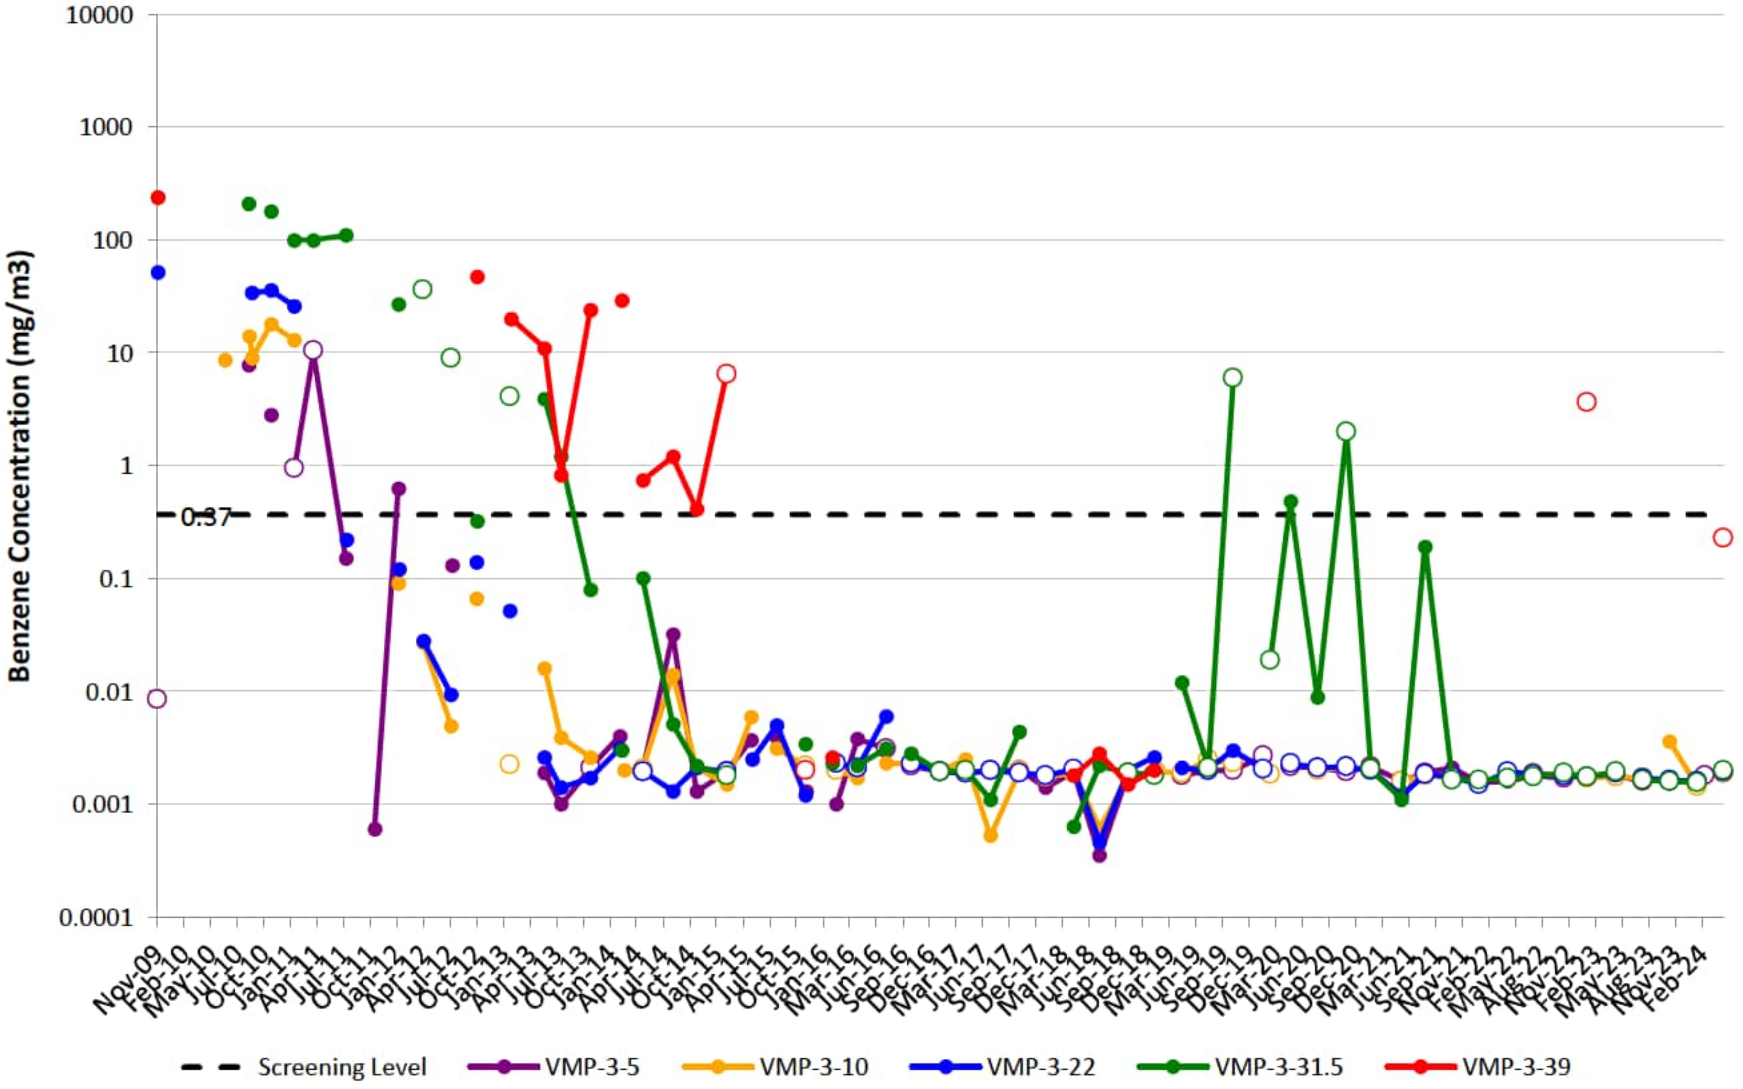
VMP-2

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.



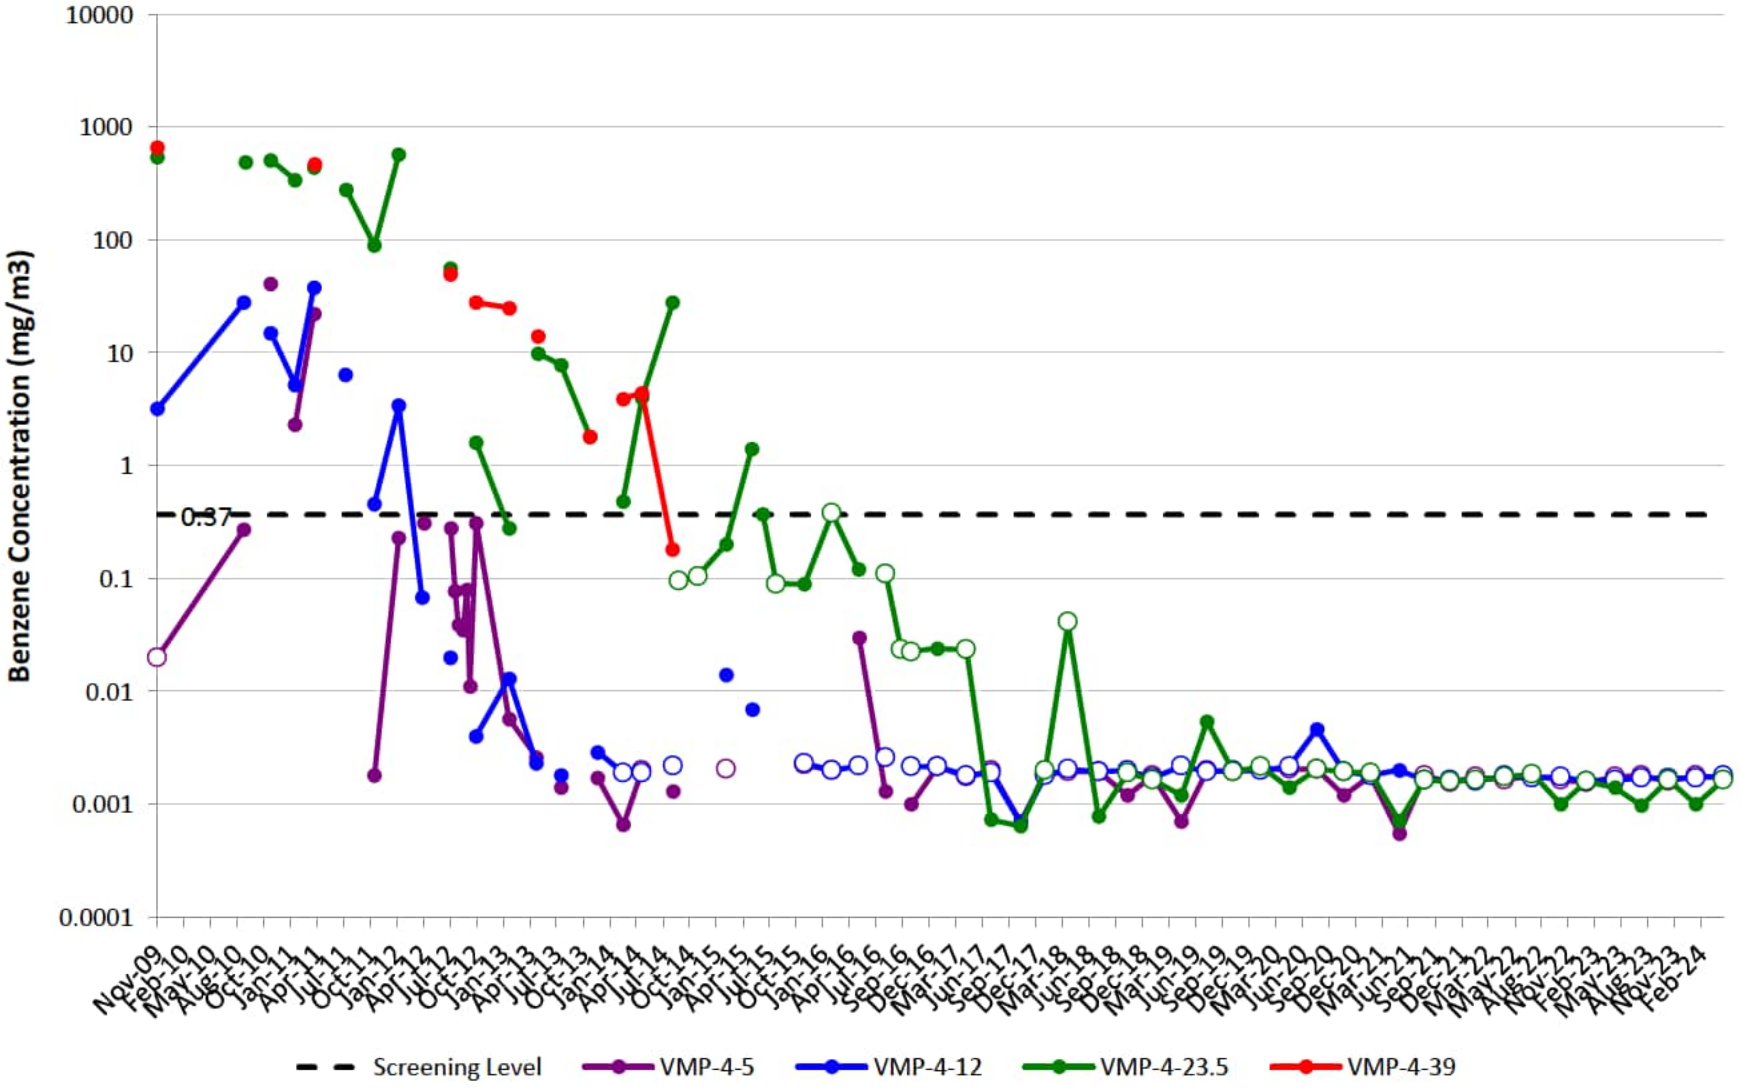
VMP-3

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.



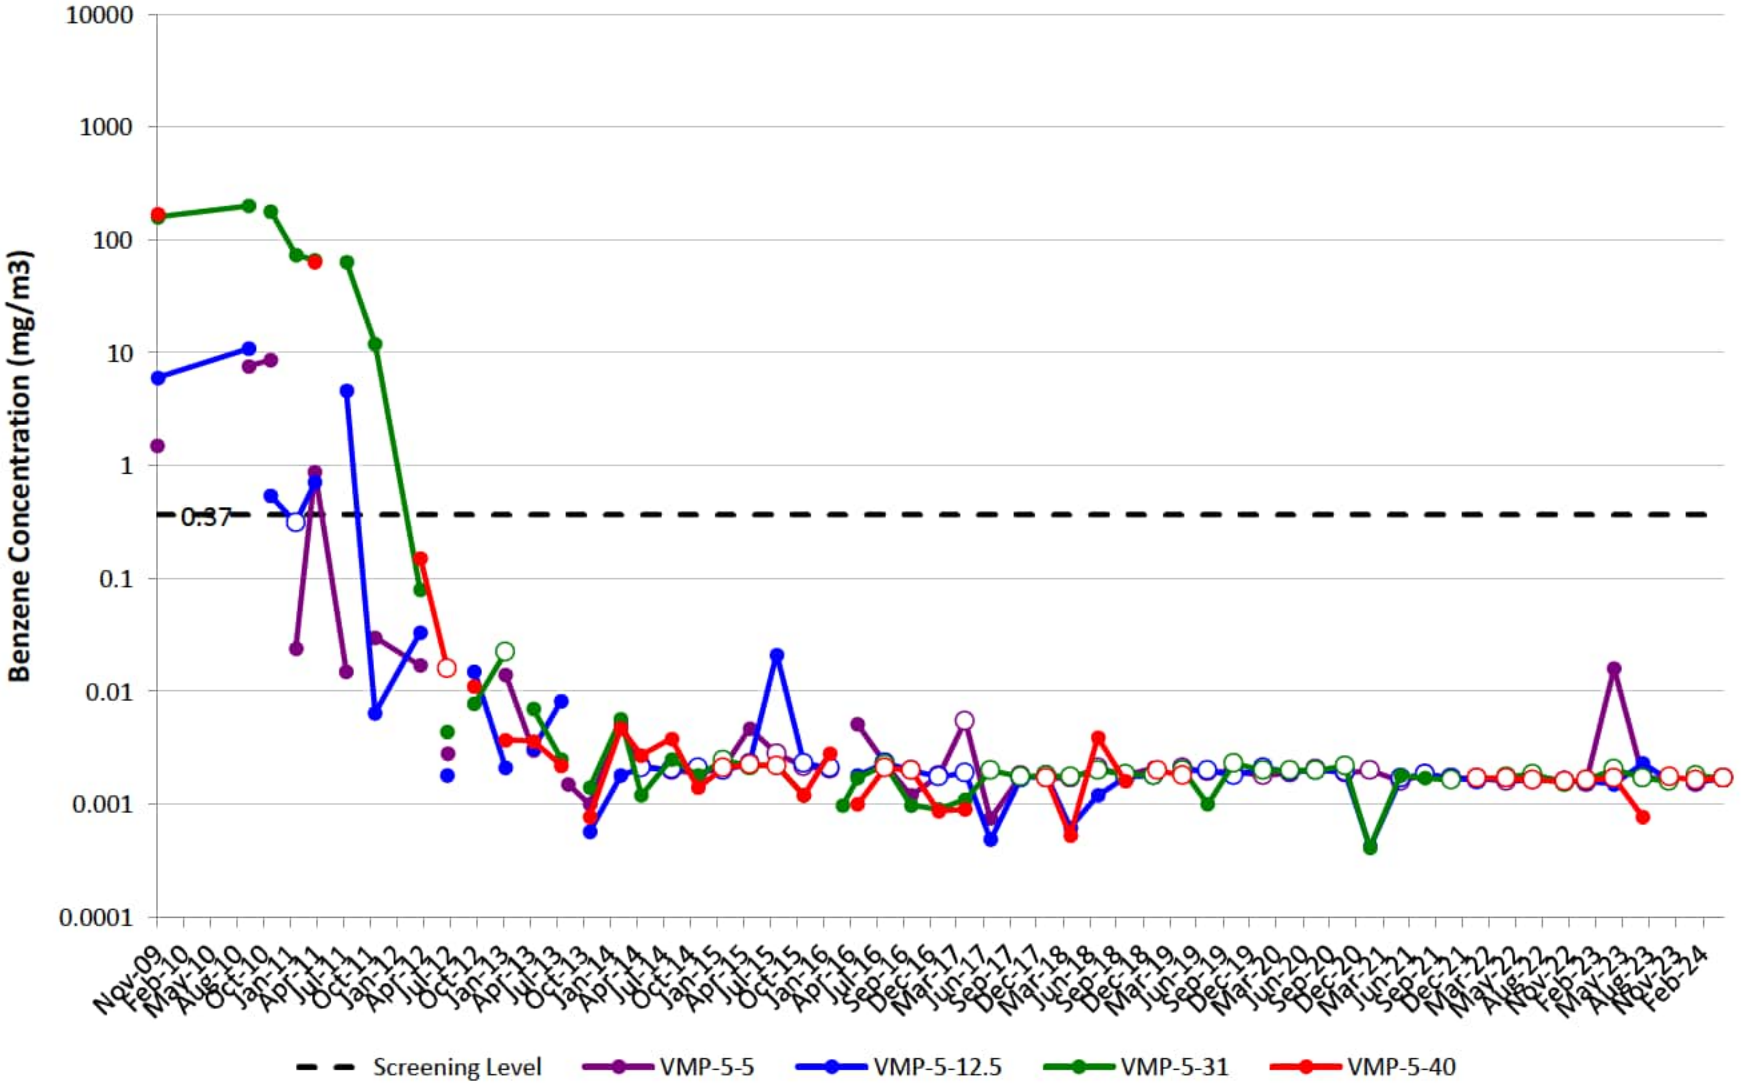
VMP-4

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.



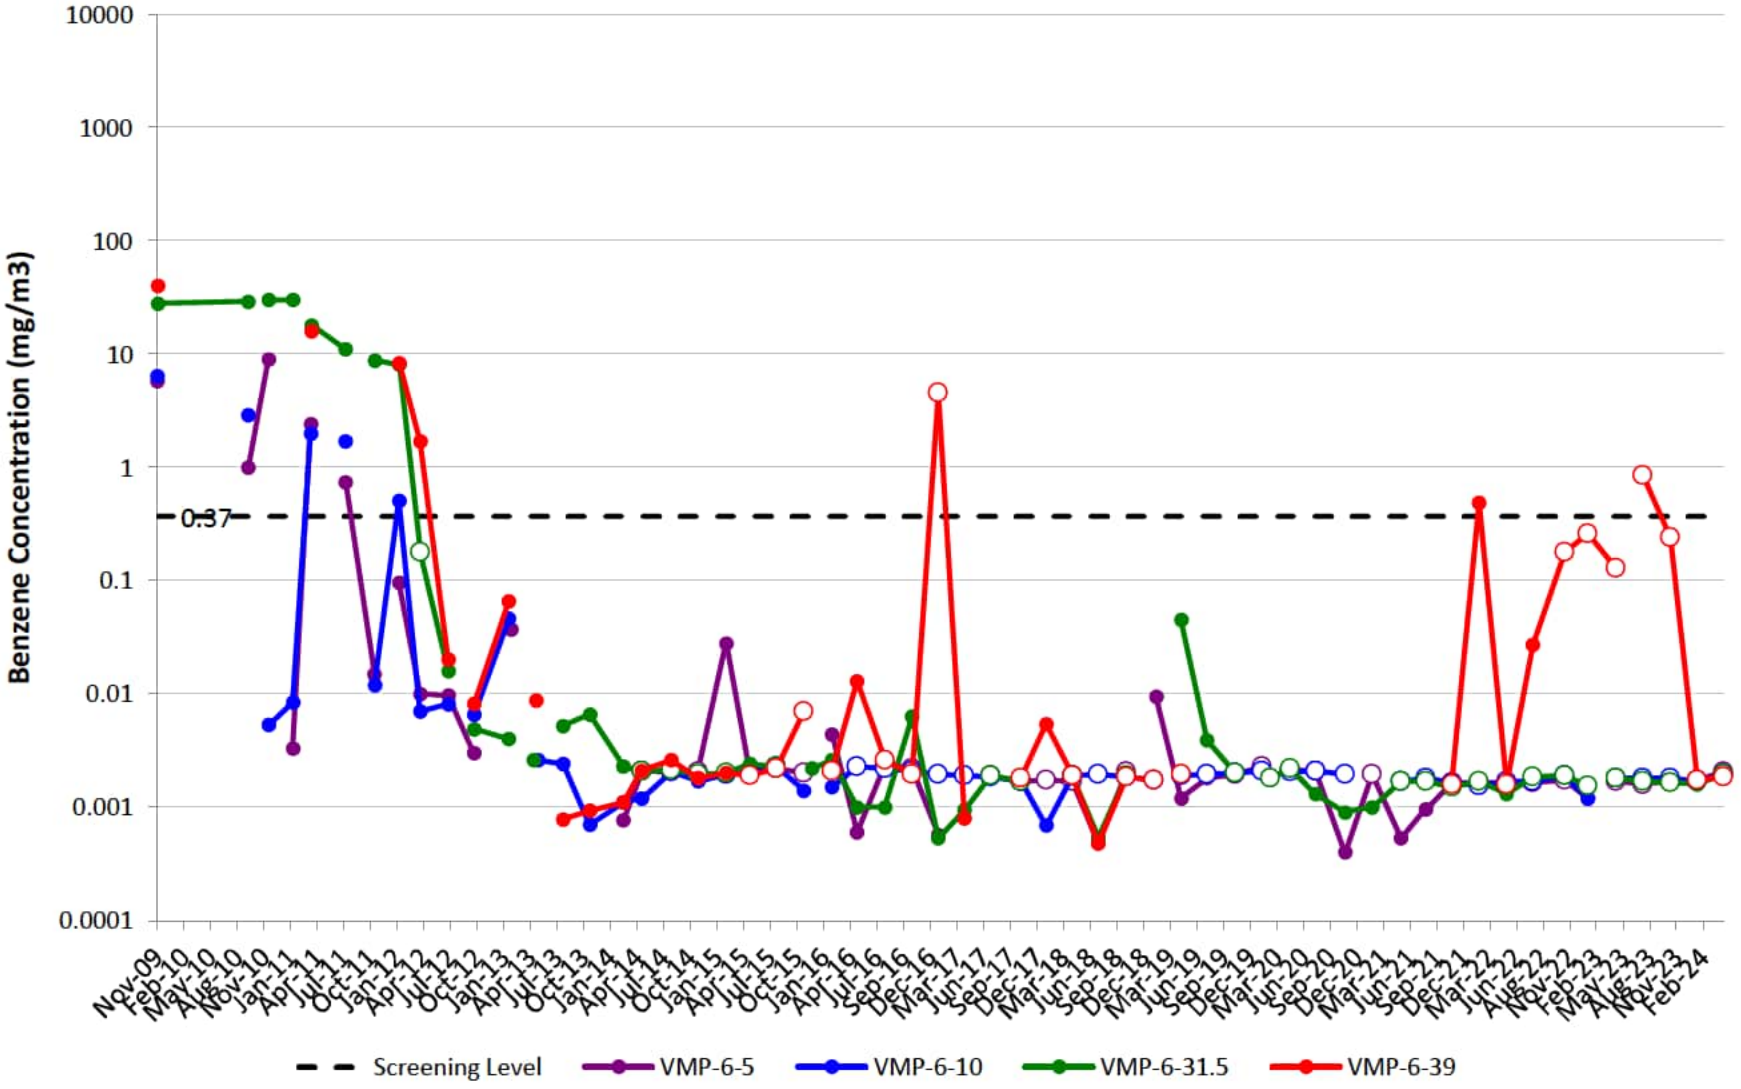
VMP-5

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.



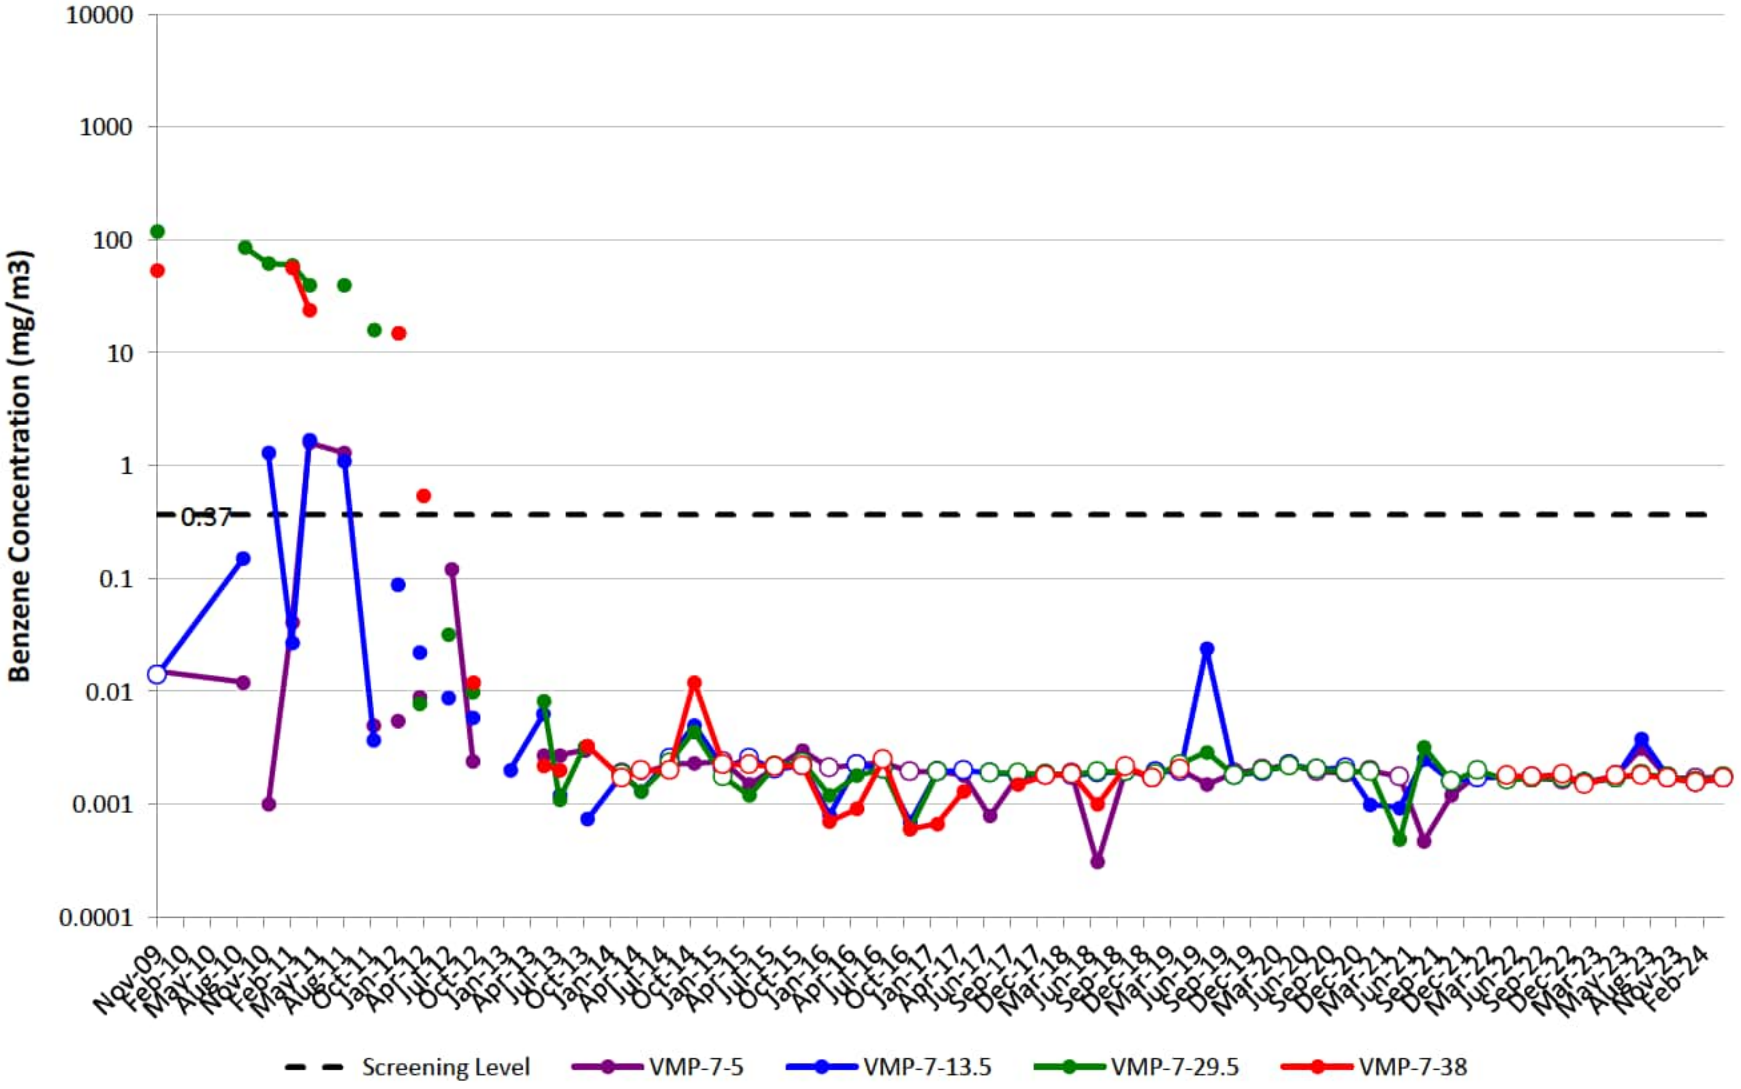
VMP-6

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.



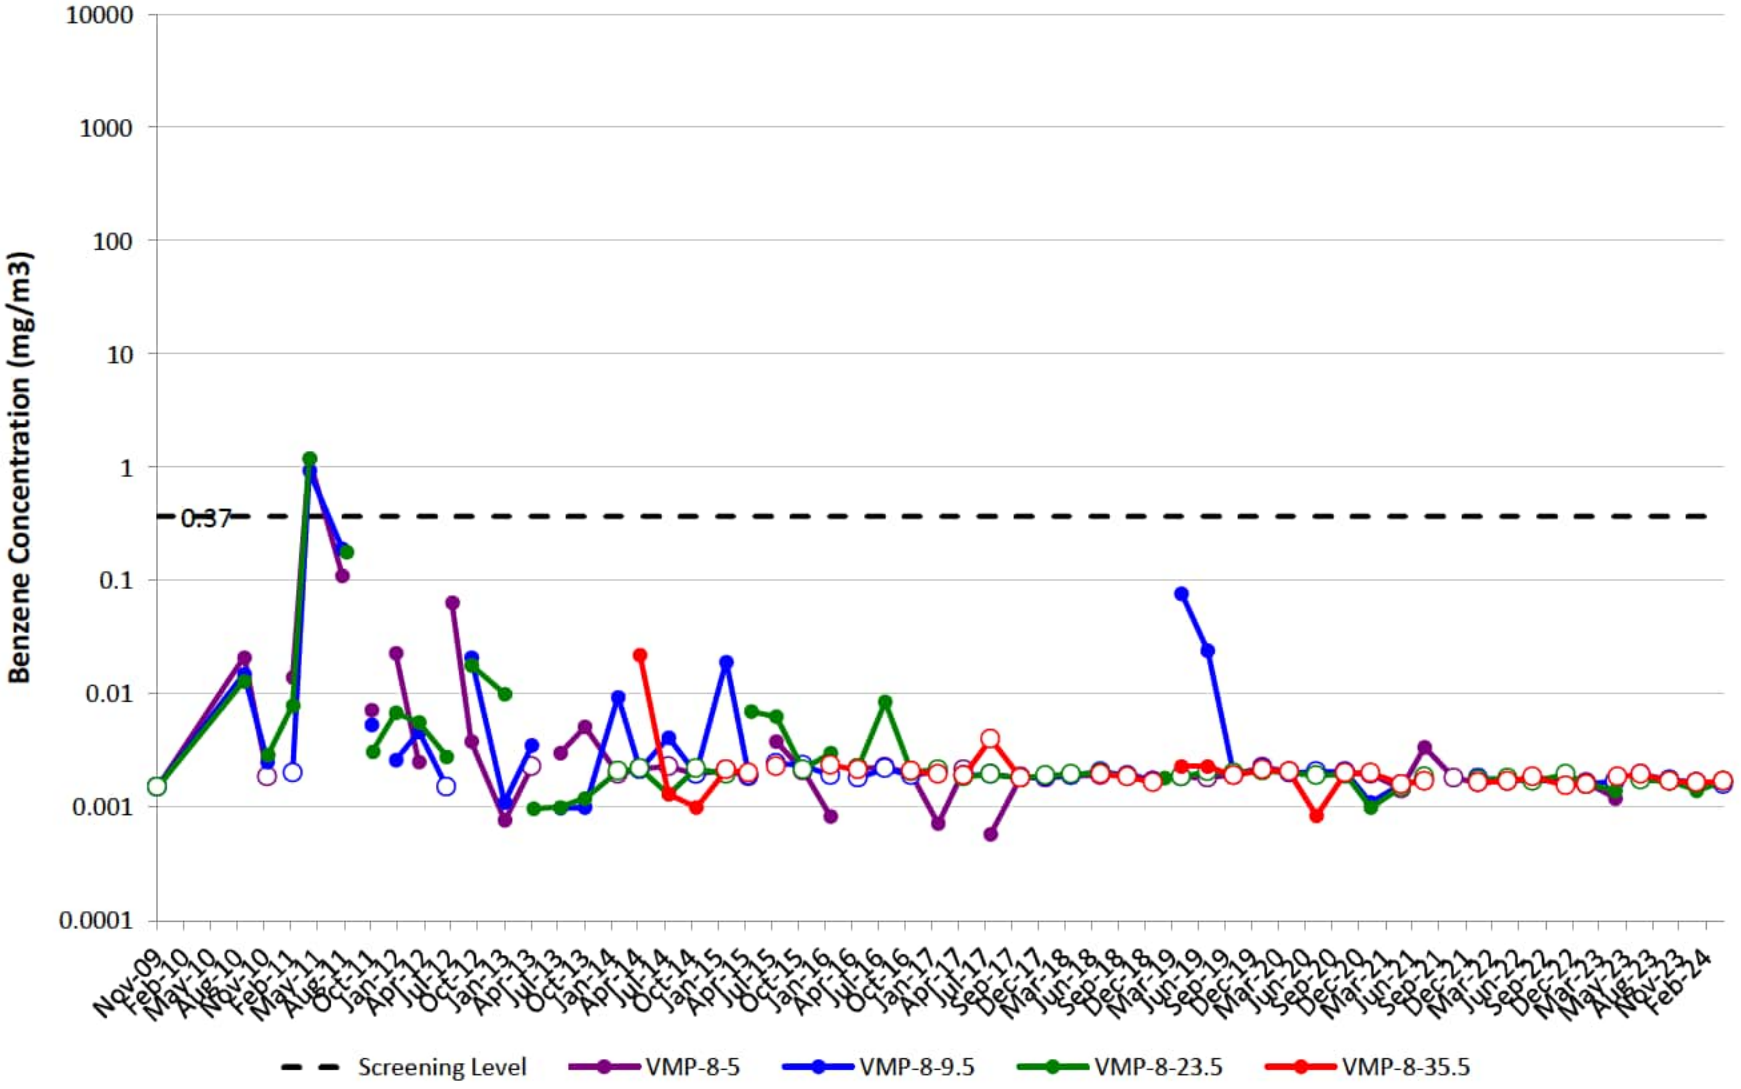
VMP-7

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.



VMP-8

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.



VMP-9

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-19

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-20

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-21

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-22

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-23

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-24

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-25

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.
Effective 2Q18, samples will no longer be collected at VMP-25-31 due to port integrity.

VMP-32

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-41

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-42

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-43

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-44

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.
Effective 4Q20, samples will no longer be collected at VMP-44 due to port integrity.

VMP-45

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-47

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-48

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-49

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-50

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.
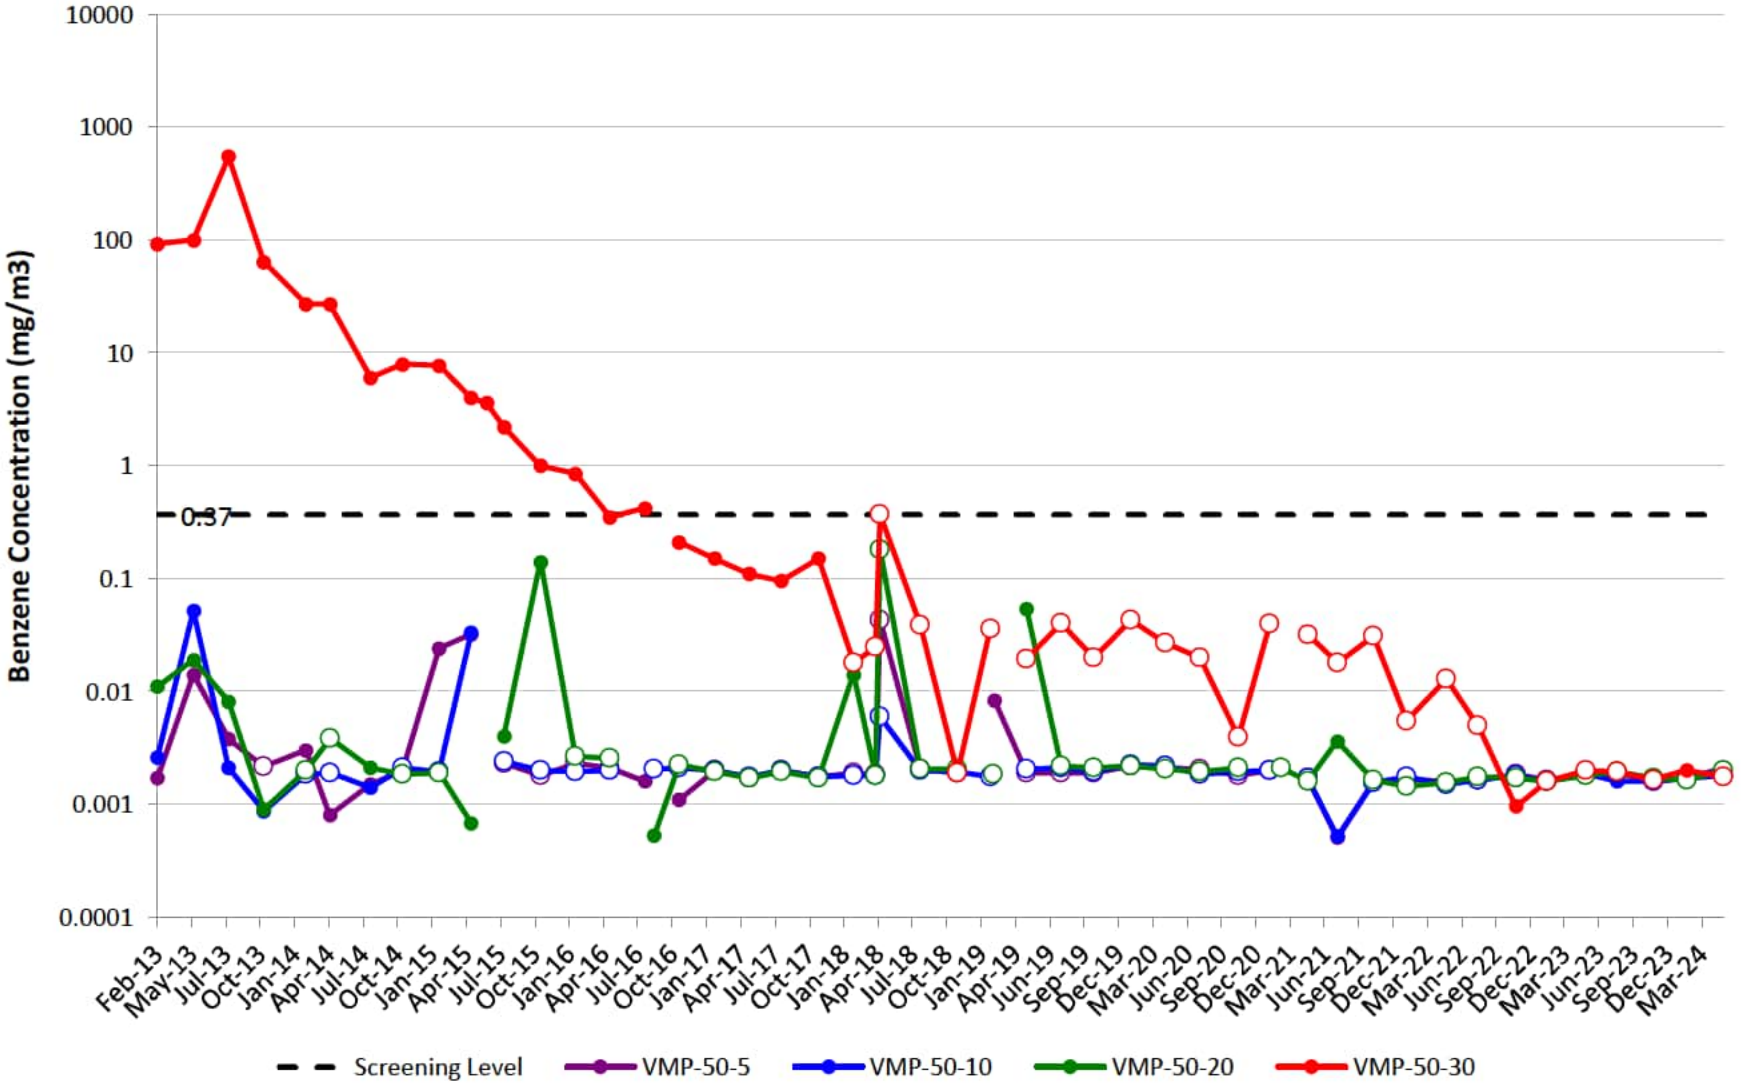
Natural gas utility line leak near VMP-50 was discovered by Ameren Illinois on May 1, 2018 and repaired on May 31, 2018.



VMP-51

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-52

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.

VMP-54

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-55

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-56

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-62

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-63

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-64

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-1

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-2

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-3

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-4

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-5

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-6

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-7

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-8

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-9

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-10

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-11

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-12

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-13

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-14

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-15

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-16

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-17

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-18

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-19

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-20

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-21

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-22

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-23

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-24

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-25

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.
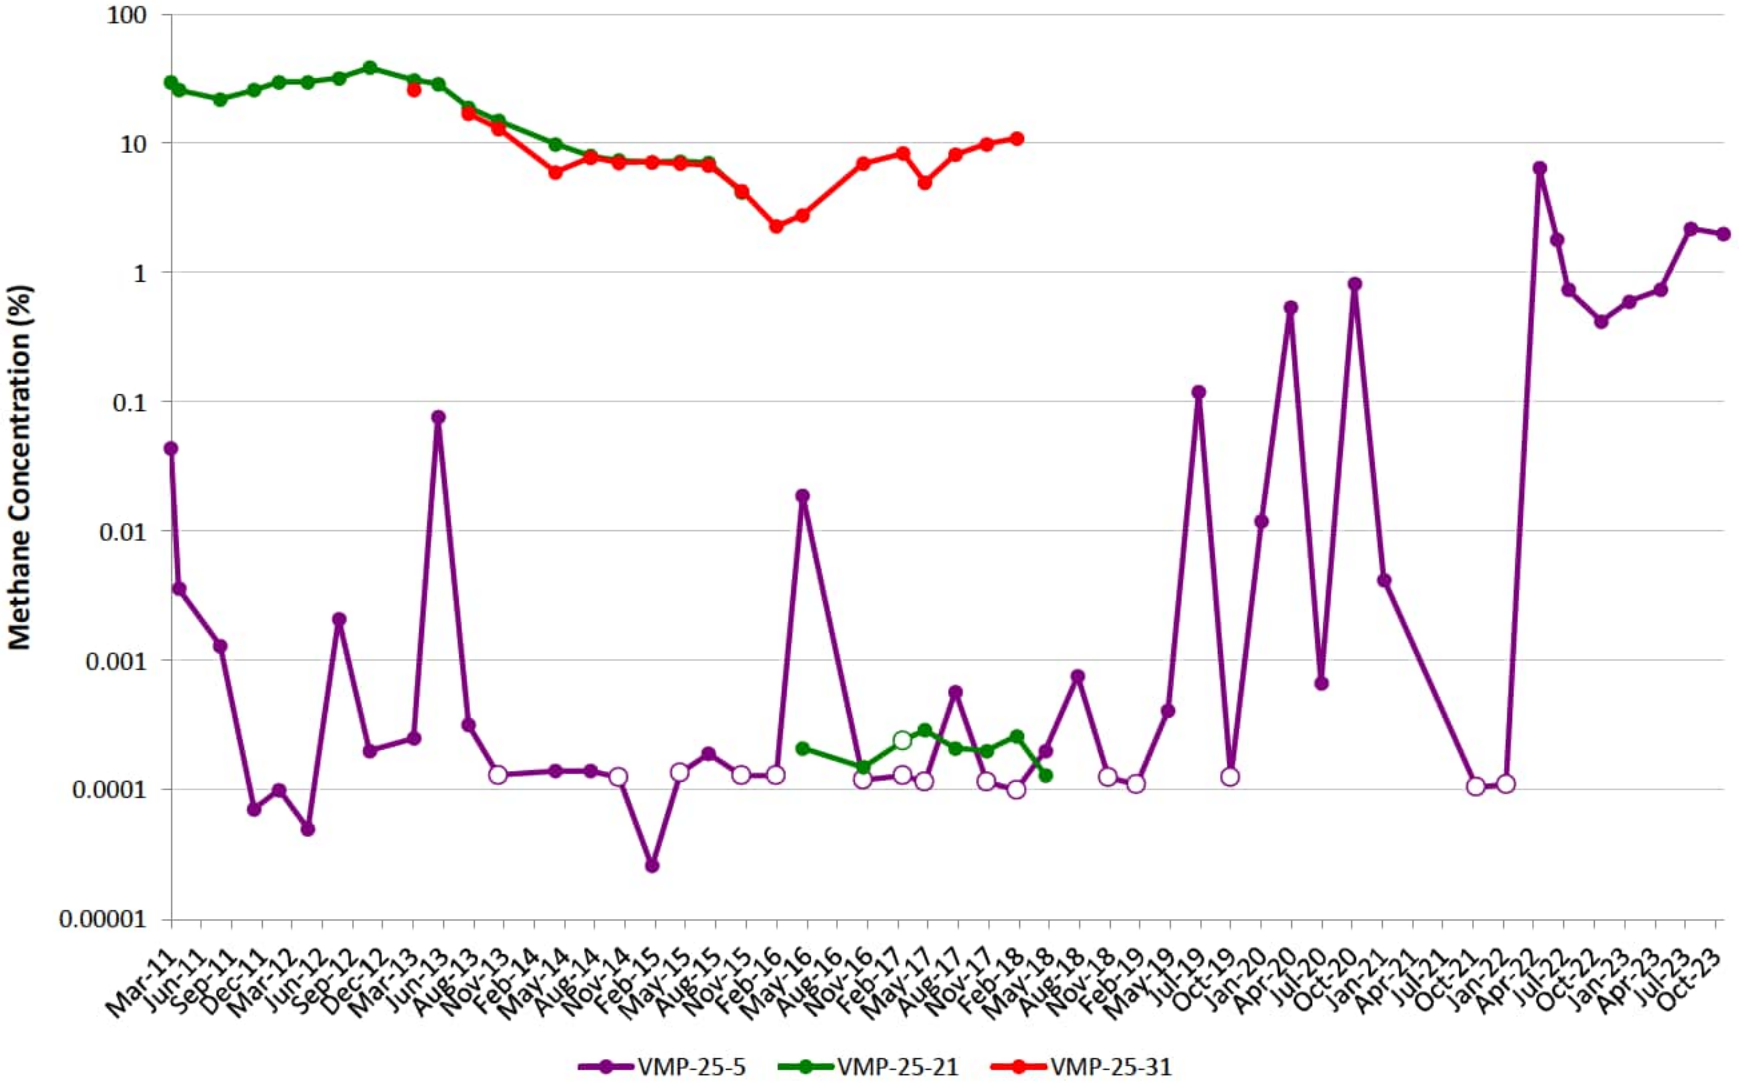
Effective 2Q18, samples will no longer be collected at VMP-25-31 due to port integrity.



VMP-32

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-41

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-42

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-43

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-44

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.
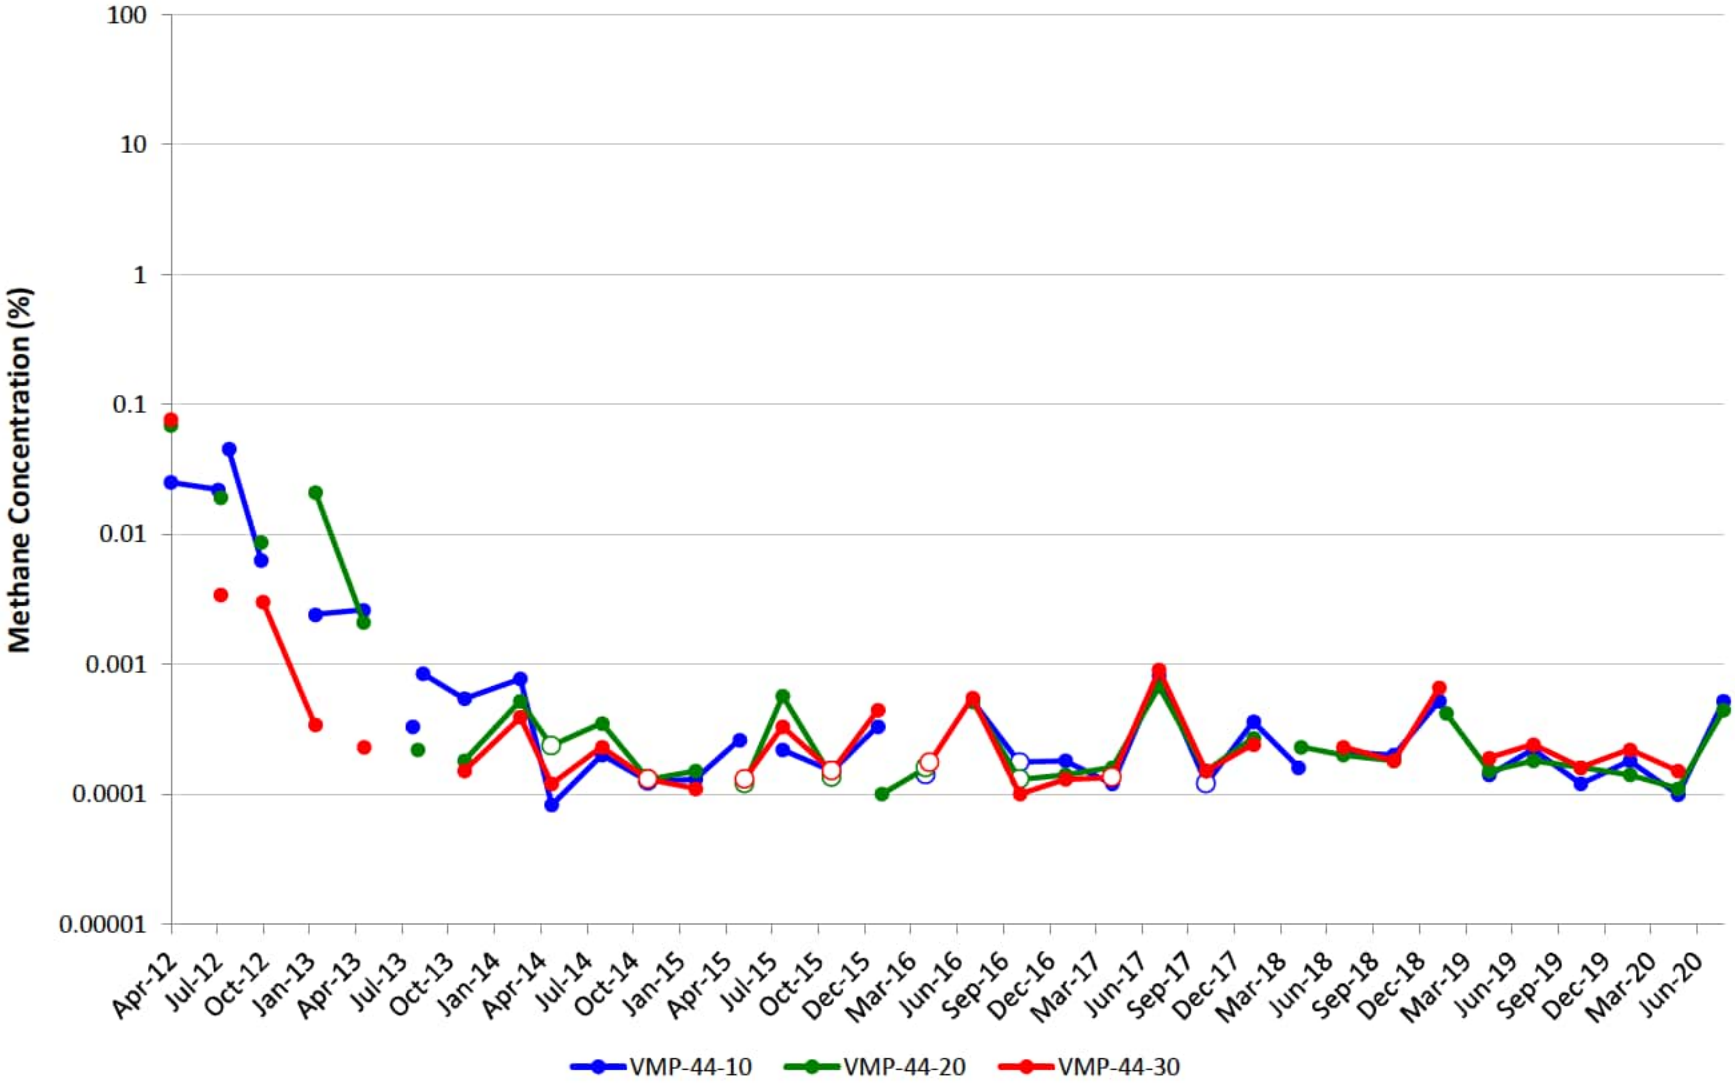
Effective 4Q20, samples will no longer be collected at VMP-44 due to port integrity.



VMP-45

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-47

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-48

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-49

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-50

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.
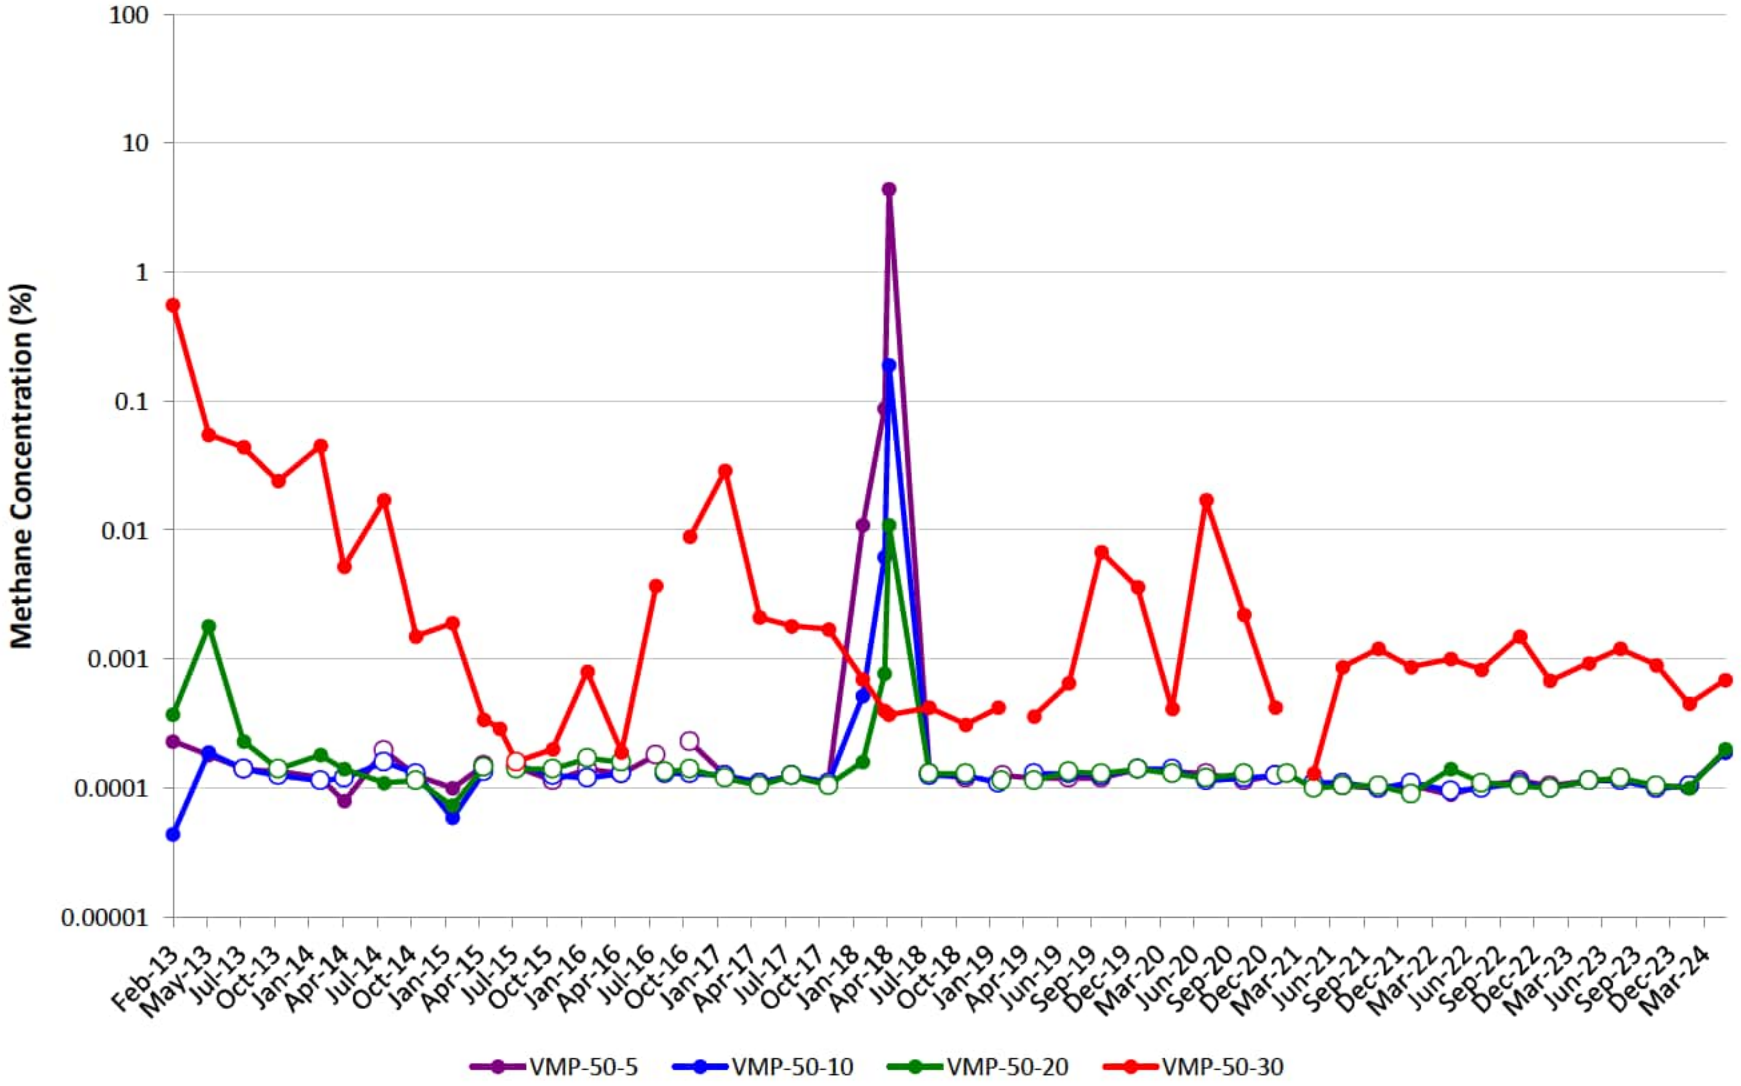
Natural gas utility line leak near VMP-50 was discovered by Ameren Illinois on May 1, 2018 and repaired on May 31, 2018.



VMP-51

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-52

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-53

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-54

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-55

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-56

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-62

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-63

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

VMP-64

Note: Open circles are non-detect results shown at ½ the reporting limit (PQL). Maximum result from parent/duplicate pair shown.
Gap in plot line indicates sample not able to be collected due to site conditions, or that ports were not sampled on the same day of the quarterly event.

APPENDIX C
SVE SYSTEM MAINTENANCE CHRONOLOGY

- **April 1, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **April 3, 2024–** Steam enhanced extraction (SEE) line air stripper vapor begins contributing to RTO. Manual dilution valve adjusted from 25% to 17% open.

- **April 4, 2024–** SEE air stripper turned off. Manual dilution valve adjusted from 17% to 25% open.

- **April 8, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **April 11, 2024–** 800 hour maintenance – Replaced WFL VLS pre-filter, replaced PW VLS filter and pre-filter, replaced combustion filter, greased all system fittings, and replaced system data card. Tested AST, VLS and process room floats.

- **April 12, 2024–** Cleaned WFL VLS float systems and housings.

- **April 15, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **April 22, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **April 29, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **May 6, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **May 10, 2024–** Red Line header valve closed and blower speed decreased from 30% to 26%. Repaired hairline crack in SVE-39 lateral line within well vault.

- **May 13, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line. Red Line header valve adjusted from 0% to 100% open, blower speed increased from 26% to 30%, and SVE-28 adjusted from 0% to 25% open.

- **May 15, 2024–** 800 hour maintenance – Replaced WFL VLS filter and pre-filter, replaced blower pre-filter, replaced combustion filter, greased all system fittings, and replaced system data card. Tested AST, VLS and process room floats.

- **May 20, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **May 22, 2024–** WFL AST interstitial vacuum adjusted from -10 in/hg to -20.5 in/hg.

- **May 23, 2024–** Cleaned both PW and WFL VLS float systems and housings.

- **May 28, 2024–** Gross Mechanical connected SEE vapor line connected to RTO piping.

APPENDIX C
SVE SYSTEM MAINTENANCE CHRONOLOGY

- **May 29, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **June 3, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **June 4, 2024–** 800 hour maintenance – Replaced WFL VLS filter and pre-filter, replaced blower filter and pre-filter, replaced combustion filter, greased all system fittings, and replaced system data card. Tested AST, VLS and process room floats.

- **June 6, 2024–** SVE-28 adjusted from 25% to 50% open.

- **June 10, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **June 11, 2024–** Replaced WFL VLS pre-filter, and replaced blower pre-filter.

- **June 12, 2024–** Teal Line header valve closed, manual dilution valve adjusted from 25% to 50% open. RTO begins accepting vapor from SEE system.

- **June 14, 2024–** Blower speed increased from 30% to 60%.

- **June 17, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **June 20, 2024–** Manual dilution valve adjusted from 50% to 28% open.

- **June 24, 2024–** Drained condensate from both system compressors and performed bubble test on natural gas line.

- **June 25, 2024–** Anguil Environmental System, Inc. replaced the HMI unit.

- **June 28, 2024–** Cleaned WFL VLS float systems and housings.

Appendix D

6/26/2024	173	92	0	0	114	0

[1]USEPA Method 2 "Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)" specifies that a default pitot tube coefficient of 0.99 shall be used to calculate flow if the coefficient is unknown and the tube is designed according to the criteria of Sections 6.7.1 to 6.7.5 of this method. During the 2nd Quarter 2013, a review of the calculation was performed and it was noted that a 0.67 coefficient should be used for the specific pitot tubes used to collect data at the site. AECOM has corrected the previously calculated mass removal to reflect the 0.67 pitot tube coefficient.

[2]Brown Leg was shut off on December 20, 2017.

[3]Green Leg was shut off on July 7, 2020, re-opened March 6, 2024, and closed March 20, 2024.

[4]Red Leg was shut off from December 18 to December 22, 2023 due to SVE vault maintenance.

[5]Teal Leg was shut off on June 12, 2024 due to start of SEE system vapor extraction.

APPENDIX E
TOTAL HEADER HYDROCARBON CONCENTRATIONS

Date	West Fenceline Concentration (ppmv)	Public Works Concentration (ppmv)
4/2/2024	21,100	64,780
4/10/2024	21,800	51,220
4/16/2024	20,300	57,200
4/22/2024	17,000	56,850
5/2/2024	21,600	60,510
5/7/2024	29,400	66,710
5/14/2024	34,900	58,350
5/21/2024	36,300	55,780
5/29/2024	27,870	63,320
6/5/2024	33,200	65,350
6/14/2024	12,123	Header Closed
6/19/2024	12,729	Header Closed
6/26/2024	24,926	Header Closed

Public Works Header was closed on June 12, 2024 due to start of SEEsystem vapor extraction.

Appendix F
SVE System Flow Rates

5/14/2024	333	61
5/21/2024	354	68
5/29/2024	346	97
6/5/2024	335	95
6/14/2024	169	0
6/19/2024	186	0
6/26/2024	379	0

[1] USEPA Method 2 "Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)" specifies that a default pitot tube coefficient of 0.99 shall be used to calculate flow if the coefficient is unknown and the tube is designed according to the criteria of Sections 6.7.1 to 6.7.5 of this method. During the 2nd Quarter 2013, a review of the calculation was performed and it was noted that a 0.67 coefficient should be used for the specific pitot tubes used to collect data at the site. AECOM has corrected the previously calculated mass removal to reflect the 0.67 pitot tube coefficient.

[2] Public Works header was closed on June 12, 2024 due to start of SEE system vapor extraction.
