Job Narrative
400-279062-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/11/2025 9:42 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.7°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-715908 recovered outside acceptance criteria, low biased, for Chloromethane and Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample (LCS) for analytical batch 400-716006 recovered outside control limits for the following analytes: 2-Hexanone. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-716006 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane, 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, 1-Chlorohexane, N-Propylbenzene, p-Isopropyltoluene and sec-Butylbenzene . The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCVIS 400-716006/2).

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: P93C-ROX-071025 (400-279062-11) and P93C-ROX-071025-DUP (400-279062-12). Elevated reporting limits (RLs) are provided.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-071025-8260-A (400-279062-1), P93C-ROX-071025 (400-279062-11) and P93C-ROX-071025-DUP (400-279062-12). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-716138 recovered outside acceptance criteria, low biased, for Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following sample was diluted due to the abundance of non-target analytes: P56-ROX-071025 (400-279062-8). Elevated reporting limits (RLs) are provided.

Method 8260D: The preservative used in the sample containers provided is not compatible with some of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: P56-ROX-071025 (400-279062-8). The requested target analyte list includes 2-chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrade in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-716138 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 400-716138 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-716138 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the matrix spike / matrix spike duplicate (MS/MSD) for 2-Chloroethyl vinyl ether was not calculable for analytical batch 400-716138 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA

Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-716008 recovered above the upper control limit for Anthracene, Benzo[a]anthracene, Chrysene, Fluoranthene, Phenanthrene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_LL_QQQ: The laboratory control sample (LCS) for preparation batch 400-715837 and analytical batch 400-716008 recovered outside control limits for the following analytes: Fluoranthene and Pyrene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_LL_QQQ: The laboratory control sample duplicate (LCSD) for preparation batch 400-715837 and analytical batch 400-716008 recovered outside control limits for the following analytes: Chrysene, Fluoranthene and Pyrene. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-716148 recovered above the upper control limit for Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-716148 recovered outside acceptance criteria, low biased, for Benzo[g,h,i]perylene, Chrysene, Dibenz(a,h)anthracene, Indeno[1,2,3-cd]pyrene and Terphenyl-d14. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Pyridine. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 400-715837 and analytical batch 400-716009: Pyridine. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8270E_QQQ: The following analyte(s) recovered outside control limits for the LCSD associated with preparation batch 400-715837 and analytical batch 400-716009: 2-Methylphenol, Phenol and Pyridine. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-716149 recovered outside acceptance criteria, low biased, for Benzenethiol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Benzoic acid. As indicated in the reference method, sample analysis may proceed; however, any detection for

the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Results were comparable, therefore, based on professional judgement phenol results in samples P59-ROX-071125, T12-ROX-071125, P74-ROX-071125 and P93A-ROX-071125 were reported from the initial run due to hold time exceedances in the secondary run.					
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X

Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.	
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.	

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

REVISION
The report being provided is a revision of the original report sent on 7/31/2025. The report (revision 1) is being revised to remove false positives.

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 7/12/2025 9:27 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.8°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-716165 recovered above the upper control limit for 1-Chlorohexane and Acrolein. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCVIS 400-716165/2).

Method 8260D: The following sample was diluted due to the abundance of non-target analytes: P59-ROX-071125 (400-279098-3). Elevated reporting limits (RLs) are provided.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: T12-ROX-071125 (400-279098-4), P74-ROX-071125 (400-279098-5) and P93A-ROX-071125 (400-279098-6). Elevated reporting limits (RLs) are provided.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-071125-8260 (400-279098-1), P59-ROX-071125 (400-279098-3), T12-ROX-071125 (400-279098-4), P74-ROX-071125 (400-279098-5) and P93A-ROX-071125 (400-279098-6). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: P74-ROX-071125 (400-279098-5). Elevated reporting limits (RLs) are provided.

Method 8260D_SIM: The following sample was diluted due to the abundance of non-target analytes: P93A-ROX-071125 (400-279098-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Benzoic acid. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-716435 was outside method criteria for the following analyte(s): Pyridine. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_QQQ: The laboratory control sample (LCS) for preparation batch 400-717019 and analytical batch 400-717094 recovered outside control limits for the following analytes: Phenol. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data are reported.

Method 8270E_QQQ: The method blank for preparation batch 400-716168 and analytical batch 400-716658 contained 1,4-Dioxane above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8270E_QQQ: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 400-716168 and analytical batch 400-716658 recovered outside control limits for the qualified analytes. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Detection Limits[2]	No results were reported as non-detect at elevated detection limits.		X		
Samples analyzed did not require dilution with the exception of non-detect VOCs in samples P58-ROX-071425, P58-ROX-071425-DUP and P93B-ROX-071425 due to the abundance of non-target analytes and/or to bring the concentration of target analytes within the calibration range. VOCs were non-detect at a dilution factor between 5X, with raised reporting limits of between 5.0 and 130,000 µg/L. VOCs in samples P58-ROX-071425, P58-ROX-071425-DUP and P93B-ROX-071425 were qualified as estimated (UJ) due to sample dilution and historical detections.

Job Narrative
400-279181-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Revision
Report revised to unreport false positives for 2,4-dinitrotoluene. Supersedes report dated 7-28-2025.

Receipt
The samples were received on 7/15/2025 10:05 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.	
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X		
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X				
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.	
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.	
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Job Narrative
400-279298-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/16/2025 9:37 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.0°C and 4.6°C.

GC/MS VOA
Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW25-ROX-071525 (400-279298-11) and MW25-ROX-071525-DUP (400-279298-12). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-716790 recovered outside acceptance criteria, low biased, for Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: MW4-ROX-071525 (400-279298-10), MW25-ROX-071525 (400-279298-11) and MW25-ROX-071525-DUP (400-279298-12). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-716940 recovered outside acceptance criteria, low biased, for Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: MW22-ROX-071525 (400-279298-6). Elevated reporting limits (RLs) are provided.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-071525-8260-A (400-279298-1), MW2-ROX-071525-EB (400-279298-3), MW2-ROX-071525 (400-279298-4), MW24-ROX-071525 (400-279298-5), MW22-ROX-071525 (400-279298-6), TB-ROX-071525-8260-B (400-279298-7) and MW4-ROX-071525-EB (400-279298-9). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: MW4-ROX-071525 (400-279298-10). Elevated reporting limits (RLs) are provided.

Method 8260D_SIM: The following samples were diluted due to the abundance of non-target analytes: MW25-ROX-071525 (400-279298-11) and MW25-ROX-071525-DUP (400-279298-12). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-716959 recovered above the upper control limit for Bis(2-ethylhexyl) phthalate, Butyl benzyl phthalate and Di-n-octyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Job ID: 400-279298-1 (Continued) Eurofins Pensacola

These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: The laboratory control sample duplicate (LCSD) for preparation batch 400-716503 and analytical batch 400-716600 recovered outside control limits for the following analytes: 2-Methylphenol, 4-Chlorophenyl phenyl ether, 4-Nitrophenol, Bis(2-chloroethoxy)methane, Bis(2-ethylhexyl) phthalate and Hexachlorobenzene. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	

Matrix Spike	MS recoveries met acceptance criteria.		X

Analytical data that required qualification based on MS/MSD data are referenced below. Analytical data reported as non-detect and associated with MS/MSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Analytical data associated with MS/MSD RPD alone outside evaluation criteria did not require qualification.

Method 8260D (VOCs)
Professional judgement was used to qualify; however, not reject 2-chloroethyl vinyl ether due to the acid reactive nature of 2-chloroethyl vinyl ether.

Analytical data that required qualification based on MS/MSD data are included in the table below.

Job Narrative
400-283673-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/7/2025 9:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.5°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838029 was above the method criteria for the following analyte(s): Acrolein, Bromochloromethane, Methylene bromide and Trichloroethene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-838029 was below the method criteria for the following analyte(s): Bromomethane, Chloromethane, Dichlorodifluoromethane, 2-Hexanone, 4-Methyl-2-pentanone (MIBK), Naphthalene and 1,2,3-Trichlorobenzene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 500-838029 recovered outside control limits for the following analytes: 1,2,3-Trichlorobenzene.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 500-838029 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 500-838029 recovered outside control limits for the following analytes: Acrolein and Trichloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-726376 recovered above the upper control limit for Benzoic acid. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-726376 recovered outside acceptance criteria, low biased, for Benzenethiol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-726376 recovered outside acceptance criteria, low biased, for 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, 2-Nitrophenol, 4,6-Dinitro-ortho-cresol, Nitrobenzene and Pyridine. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The laboratory control sample (LCS) for preparation batch 400-726052 and analytical batch 400-726376 recovered outside control limits for the following analytes: 2-Chloronaphthalene. These analytes were biased high in the LCS and

were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.		X		
Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative. The laboratory case narrative noted that one sample container was received broken. No qualification of data was required.					
Holding Times	Analyses were performed within holding time.		X		
Method 8270E All SVOCs in samples MW12-ROX-100725 and MW26-ROX-100725 were re-extracted 1 day outside of extraction time criteria (7 days) and then re-analyzed due to no, or low, quality control surrogate recoveries in the original preparation; both sets of data were reported. Results were comparable, therefore, based on professional judgement SVOCs in samples MW12-ROX-040825 and MW26-ROX-040825 were reported from the primary run.					
Surrogate	Surrogate recoveries met acceptance criteria.		X

Job Narrative
400-283769-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/8/2025 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.4°C.

Receipt Exceptions
1-B for the following sample(s) was received broken

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838414 was above the method criteria for the following analyte(s): Vinyl acetate. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-838414 was below the method criteria for the following analyte(s): Acetone, 2-Butanone (MEK), Dichlorodifluoromethane, 2-Hexanone and 4-Methyl-2-pentanone (MIBK). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The following analyte(s) recovered outside control limits for the LCSD associated with analytical batch 500-838414: Dichlorodifluoromethane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 500-838414 were outside control limits for one or more analytes.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-726533 recovered above the upper control limit for Benzoic acid. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-726490 and analytical batch 400-726533 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8270E_QQQ: The following samples were re-prepared outside of preparation holding time due to some surrogates failing on previous run

MW12-ROX-100725 (400-283769-4) and MW26-ROX-100725 (400-283769-5).

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727077 recovered above the upper control limit for Benzyl alcohol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the

data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727077 recovered above the upper control limit for Benzoic acid. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727077 recovered outside acceptance criteria, low biased, for Dimethyl phthalate and Diethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The laboratory control sample (LCS) for preparation batch 400-726759 and analytical batch 400-727077 recovered outside control limits for the following analytes: 2-Chloronaphthalene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: Surrogate recovery for the following samples were outside control limits: MW12-ROX-100725 (400-283769-4) and MW26-ROX-100725 (400-283769-5). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	
Matrix Spike	MS recoveries met acceptance criteria.			X	
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.		X		

LCS/LCSD ID	Parameter	Analyte	LCS/LCSD Recovery	RPD	LCS/LCSD/RPD Criteria
LCS 400-726807/2-A	SVOCs	4,6-Dinitro-ortho-cresol	**169**	NA	10-150

Analytical data reported as non-detect and associated with LCS/LCSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			Samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X

Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Method 8260D (VOCs)

The initial calibration verification (ICV) and continuing calibration verifications (CCVs) for several analytes were outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Method 8270E (SVOCs)

The continuing calibration verifications (CCVs) for Dimethyl phthalate were outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW6B-ROX-100825	SVOCs	Dimethyl phthalate	UJ
MW6A-ROX-100825	SVOCs	Dimethyl phthalate	UJ

Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-283851-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/9/2025 9:35 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-838796 was below the method criteria for the following analyte(s): Acetone, 2-Butanone (MEK), 2-Hexanone and 4-Methyl-2-pentanone (MIBK). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838796 was above the method criteria for the following analyte(s): Bromomethane, 1,2,3-Trichlorobenzene, Vinyl acetate and Vinyl chloride. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-726533 recovered above the upper control limit for Benzoic acid. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The laboratory control sample (LCS) for preparation batch 400-726807 and analytical batch 400-726884 recovered outside control limits for the following analytes: 2,4-Dinitrophenol, 2,6-Dinitrotoluene and 4,6-Dinitro-2-methylphenol. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727144 recovered outside acceptance criteria, low biased, for Dimethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727144 recovered above the upper control limit for Benzoic acid, Benzyl alcohol and Pyridine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification. Equipment blanks and trip blanks are quality control samples and do not require qualification.

Sample ID	Parameter	Analyte	New Reporting Limit (RL)	Qualification
MW23-ROX-100925	VOCs	Methylene Chloride	-	U

Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			Samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Method 8260D (VOCs)

The initial calibration verification (ICV) and continuing calibration verifications (CCVs) for several analytes were outside evaluation criteria, biased low. 2-Chloroethyl vinyl ether in sample MW23-ROX-100925 was previously qualified due to LCS recoveries outside criteria; no further qualification required. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW23-ROX-100925	VOCs	Acrolein	UJ
MW23-ROX-100925	VOCs	Vinyl acetate	UJ
MW23-ROX-100925	VOCs	2-Butanone (MEK)	UJ
MW23-ROX-100925	VOCs	4-Methyl-2-pentanone (MIBK)	UJ

Method 8270E (SVOCs)

The continuing calibration verifications (CCVs) for dimethyl phthalate was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW23-ROX-100925	SVOCs	Dimethyl phthalate	UJ

Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-283943-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Revision
Report revised to correct Sample Receipt Checklist. Supersedes report dated 10-23-2025.

Receipt
The samples were received on 10/10/2025 9:18 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838978 was above the method criteria for the following analyte(s): Bromomethane, Dichlorodifluoromethane, Isopropylbenzene, n-Butylbenzene, N-Propylbenzene and sec-Butylbenzene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: Methylene chloride was detected in the following items: (MB 500-838978/8). Methylene chloride is a known lab contaminant; therefore all low level detects for this compound could be suspected as lab contamination.

Method 8260D: The following analyte(s) recovered outside control limits for the LCS associated with analytical batch 500-838978: 2-Chloroethyl vinyl ether. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 500-838978 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits. Additionally, preserved vials were provided. 2 Chloroethyl vinyl ether degrades in acidic environment.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727144 recovered outside acceptance criteria, low biased, for Dimethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727144 recovered above the upper control limit for Benzoic acid, Benzyl alcohol and Pyridine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Method 8260D (VOCs)

The initial calibration verification (ICV) continuing calibration verifications (CCVs) for several analytes were outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW13-ROX-100925	VOCs	Acrolein	UJ
MW13-ROX-100925	VOCs	Acetone	UJ
MW13-ROX-100925	VOCs	2-Butanone (MEK)	UJ
MW13-ROX-100925	VOCs	2-Hexanone	UJ
MW13-ROX-100925	VOCs	4-Methyl-2-pentanone (MIBK)	UJ

Method 8270E (SVOCs)

The continuing calibration verifications (CCVs) for dimethyl phthalate was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW13-ROX-100925	SVOCs	Dimethyl phthalate	UJ

Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples)			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

	indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method				

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-283944-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/10/2025 9:18 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-838796 was below the method criteria for the following analyte(s): Acetone, 2-Butanone (MEK), 2-Hexanone and 4-Methyl-2-pentanone (MIBK). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838796 was above the method criteria for the following analyte(s): Bromomethane, 1,2,3-Trichlorobenzene, Vinyl acetate and Vinyl chloride. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727144 recovered outside acceptance criteria, low biased, for Dimethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727144 recovered above the upper control limit for Benzoic acid, Benzyl alcohol and Pyridine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.			X	
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.		X		

LCS/LCSD ID	Parameter	Analyte	LCS/LCSD Recovery	RPD	LCS/LCSD/RPD Criteria
LCS 500-838981/4 LCSD 500-838981/5	VOCs	Dibromochloromethane	**127**/120	6	68-125/20
		1,1,1,2-Tetrachloroethane	**127**/118	7	70-125/20

Analytical data reported as non-detect and associated with LCS/LCSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			

Laboratory Blank	Target analytes were not detected in the laboratory blank.		X		

Blank ID	Parameter	Analyte	Concentration/Amount
MB 500-838981/7	VOCs	1,2,3-Trichlorobenzene	0.497 µg/L

Analytical data that were reported non-detect or at concentrations greater than five times (5X) the associated blank concentration did not require qualification.

Detection Limits[2]	No results were reported as non-detect at elevated detection limits.		X		Analytes were detected in samples that required dilution.

Analytes were detected in samples that required dilution with the exception of MW4-ROX-100925 and MW4-ROX-100925-DUP. All VOCs by 8260D SIM from these samples were qualified estimated (UJ).

Reporting/Other	No other quality issues were noted that would impact the usability of this data set.		X		

The laboratory report was revised on November 21, 2025, to add comments regarding chloroform detections in samples MW4-ROX-100925 and MW4-ROX-100925-DUP.

Chloroform was detected in samples MW4-ROX-100925 and MW4-ROX-100925-DUP below the laboratory's LOQ. The detections are possibly due to the laboratory water system; chloroform results were qualified as estimated (J).

Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.		X		

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Method 8260D (VOCs)

The initial calibration verification (ICV) for several acrolein was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-283945-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Revision
Report revised to add comment regarding chloroform detection. Supersedes report dated 10-23-2025.

Receipt
The samples were received on 10/10/2025 9:18 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-838796 was below the method criteria for the following analyte(s): Acetone, 2-Butanone (MEK), 2-Hexanone and 4-Methyl-2-pentanone (MIBK). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838796 was above the method criteria for the following analyte(s): Bromomethane, 1,2,3-Trichlorobenzene, Vinyl acetate and Vinyl chloride. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838981 was above the method criteria for the following analyte(s): Bromodichloromethane, 1,1,1,2-Tetrachloroethane and Vinyl chloride. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The laboratory control sample (LCS) for analytical batch 500-838981 recovered outside control limits for the following analytes: Bromodichloromethane and 1,1,1,2-Tetrachloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW4-ROX-100925 (400-283945-4) and MW4-ROX-100925-DUP (400-283945-5). Elevated reporting limits (RLs) are provided.

Method 8260D: The method blank for analytical batch 500-838981 contained 1,2,3-Trichlorobenzene above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8260D: Chloroform was detected in the following items: MW4-ROX-100925 (400-283945-4) and MW4-ROX-100925-DUP (400-283945-5). These chloroform detects were below our laboratory reporting limit (LOQ). This is possibly due to the laboratory water system.

Method 8260D_SIM: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: MW4-ROX-100925 (400-283945-4) and MW4-ROX-100925-DUP (400-283945-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 400-726498.

Job ID: 400-283945-1 (Continued)

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-718787 was outside method criteria for the following analyte(s): Benzoic acid. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 400-726498.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-726687 recovered outside acceptance criteria, low biased, for Benzyl alcohol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-726687 recovered above the upper control limit for Benzoic acid. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW4-ROX-100925 (400-283945-4) and MW4-ROX-100925-DUP (400-283945-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	
Matrix Spike	MS recoveries met acceptance criteria.		X		

MS/MSD ID	Parameter	Analyte	MS/MSD Recovery (%)	RPD	MS/MSD/ RPD Criteria
P54-ROX-101025 MS/MSD	VOCs	2-Chloroethyl vinyl ether	**0/0**	NC	52-136/20

Analytical data that required qualification based on MS/MSD data are referenced below. Analytical data reported as non-detect and associated with MS/MSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Analytical data associated with MS/MSD RPD alone outside evaluation criteria did not require qualification.

Professional judgement was used to qualify; however, not reject 2-chloroethyl vinyl ether due to the acid reactive nature of 2-chloroethyl vinyl ether.

Job Narrative
400-283996-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/11/2025 9:20 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.6°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-838796 was below the method criteria for the following analyte(s): Acetone, 2-Butanone (MEK), 2-Hexanone and 4-Methyl-2-pentanone (MIBK). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838796 was above the method criteria for the following analyte(s): Bromomethane, 1,2,3-Trichlorobenzene, Vinyl acetate and Vinyl chloride. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 500-838796 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. Additionally, preserved vials were provided by client. 2 Chloroethyl vinyl ether is know to degrade in the presence of acid. This compound had 0% recovery in the MS/MSD.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-718787 was outside method criteria for the following analyte(s): Benzoic acid. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727077 recovered above the upper control limit for Benzyl alcohol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727077 recovered above the upper control limit for Benzoic acid. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727077 recovered outside acceptance criteria, low biased, for Dimethyl phthalate and Diethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The laboratory control sample (LCS) for preparation batch 400-726759 and analytical batch 400-727077 recovered outside control limits for the following analytes: 2-Chloronaphthalene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: Surrogate recovery for the following sample was outside the upper control limit: MW5-ROX-101025

Job ID: 400-283996-1 (Continued)

(400-283996-4). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			

The cooler receipt form did not indicate any problems.

Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.

Holding Times	Analyses were performed within holding time.	X

Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples)			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-284047-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/14/2025 10:04 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-839099 was below the method criteria for the following analyte(s): Acetone, Bromodichloromethane, Bromoform, 2-Butanone (MEK), Dichlorodifluoromethane, 2-Hexanone, 4-Methyl-2-pentanone (MIBK), 1,1,2,2-Tetrachloroethane, trans-1,3-Dichloropropene and Vinyl acetate. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in 500-839099 was above the method criteria for the following analyte(s): Dichlorodifluoromethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The laboratory control sample (LCS) for analytical batch 500-839099 recovered outside control limits for the following analytes: Dichlorodifluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 500-839099 recovered outside control limits for the following analytes: Dichlorodifluoromethane and Vinyl chloride. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_SIM: The continuing calibration verification (CCV) associated with batch 400-727977 recovered above the upper control limit for 1,2-Dibromoethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 400-727032.

Method 8270E_LL_QQQ: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: MW14-ROX-101325 (400-284047-3), MW14-ROX-101325-DUP (400-284047-4), MW27-ROX-101325 (400-284047-5) and MW28-ROX-101325 (400-284047-6). These results have been reported and qualified.

Method 8270E_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 400-727032.

Method 8270E_QQQ: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: MW14-ROX-101325 (400-284047-3), MW14-ROX-101325-DUP (400-284047-4), MW27-

ROX-101325 (400-284047-5) and MW28-ROX-101325 (400-284047-6). These results have been reported and qualified.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727468 recovered above the upper control limit for Benzyl alcohol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727468 recovered outside acceptance criteria, low biased, for Dimethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
400-284156-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Revision
Report revised to correct false positiv results for pyridine. Supersedes report dated 10-29-2025.

Receipt
The samples were received on 10/15/2025 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with the following had compounds outside 20% drift for method 8260D. A low level standard (CCVL) was analyzed at or below the reporting limit to demonstrate sensitivity for regularly requested compounds. Any detects for out of control compounds should be considered estimates.TB-ROX-101425-8260-(400-284156-1), ROST3MW-ROX-101425 (400-284156-3), ROST4PZE-ROX-101425 (400-284156-4), MW1-ROX-101425 (400-284156-5), MW2-ROX-101425 (400-284156-6) and MW2-ROX-101425-DUP (400-284156-7)

Method 8260D: The following samples were diluted due to the abundance of target and non-target analytes: MW2-ROX-101425 (400-284156-6) and MW2-ROX-101425-DUP (400-284156-7). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 400-727032.

Method 8270E_LL_QQQ: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: ROST3MW-ROX-101425 (400-284156-3), ROST4PZE-ROX-101425 (400-284156-4), MW1-ROX-101425 (400-284156-5), MW2-ROX-101425 (400-284156-6) and MW2-ROX-101425-DUP (400-284156-7). These results have been reported and qualified.

Method 8270E_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 400-727032.

Method 8270E_QQQ: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: ROST3MW-ROX-101425 (400-284156-3). These results have been reported and qualified.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727468 recovered above the upper control limit for Benzyl alcohol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727468 recovered outside acceptance criteria, low biased, for Dimethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Stage 2A Validation

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.		X		
All SVOCs in sample ROST4PZC-ROX-101525 was re-extracted 6 days outside of extraction time criteria (7 days) and then re-analyzed due to no, or low, quality control surrogate recoveries in the original preparation; both sets of data were reported. Results were comparable, therefore, based on professional judgement SVOCs in sample ROST4PZC-ROX-101525 were reported from the primary run.					
Surrogate	Surrogate recoveries met acceptance criteria.		X		

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
ROST4PZC-ROX-101525	SVOCs	Nitrobenzene-d5	49	50-150
ROST4PZC-ROX-101525	SVOCs	Terphenyl-d14	30	43-147
ROST4PZC-ROX-101525	SVOCs	2-Fluorobiphenyl	3	10-150
ROST4PZC-ROX-101525	SVOCs	Phenol-d5	5	10-150
ROST4PZC-ROX-101525	SVOCs	2,4,6-Tribromophenol	0.4	10-150

Qualifications due to surrogate recoveries were qualified if two or more base/neutral and/or acid surrogate recoveries were outside evaluation criteria.

Professional judgement was used to qualify as estimated, however, not reject the SVOCs results associated with sample ROST4PZC-ROX-10125 due to poor surrogate recoveries. All associated sample results were qualified as estimated (UJ/J) due to surrogate recoveries outside of the criteria.

Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	
Matrix Spike	MS recoveries met acceptance criteria.			X	

Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.		X

Analytical data reported as non-detect and associated with LCS/LCSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Analytical data associated with LCS/LCSD RPD alone outside evaluation criteria did not require qualification.

Analytical data that required qualification based on LCS/LCSD data are referenced below.

Diethyl phthalate, dimethyl phthalate, and di-n-butyl-phthalate in sample ROST4PZC-ROX-101525 were previously qualified due to surrogate recoveries outside criteria; no further qualification required.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-284249-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/16/2025 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-727836 recovered above the upper control limit for Acetone, Bromomethane, Chloroethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCVIS 400-727836/2).

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid : TB-ROX-101525-8260 (400-284249-1), ROST4PZC-ROX-101525 (400-284249-3), ROST4PZG-ROX-101525 (400-284249-4) and MW22-ROX-101525 (400-284249-5). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and acrylonitrile, acid-labile compounds that degrades in an acidic medium.

Method 8260D: The laboratory control sample (LCS) for analytical batch 400-727836 recovered outside control limits for the following analytes: Acetone, Bromomethane and n-Butylbenzene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following samples were diluted due to the abundance of non-target analytes: ROST4PZC-ROX-101525 (400-284249-3) and MW22-ROX-101525 (400-284249-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 400-727296.

Method 8270E_LL_QQQ: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: (LCS 400-727296/2-A) and (LCSD 400-727296/3-A). These results have been reported and qualified.

Method 8270E_LL_QQQ: Surrogate recovery for the following sample was outside control limits: ROST4PZC-ROX-101525 (400-284249-3). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data have been reported.

Method 8270E_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 400-727296.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-728176 recovered above the upper control limit for Quinoline. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Job ID: 400-284249-1 (Continued) Eurofins Pensacola

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-728176 recovered outside acceptance criteria, low biased, for 2,4-Dinitrophenol, 4,6-Dinitro-ortho-cresol, Diethyl phthalate and Dimethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: The following analyte(s) recovered outside control limits for the LCS/LCSD associated with preparation batch 400-727296 and analytical batch 400-728176: Diethyl phthalate, Dimethyl phthalate and Di-n-butyl phthalate. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8270E_QQQ: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-727296 and analytical batch 400-728176 recovered outside control limits for the following analytes: 2,4-Dinitrophenol.

Method 8270E_QQQ: The following sample was re-prepared outside of preparation holding time due to surrogate failure on the acid portion of the sample: ROST4PZC-ROX-101525 (400-284249-3).

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-728433 recovered above the upper control limit for Bis(2-ethylhexyl) phthalate and Benzyl alcohol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-728433 recovered outside acceptance criteria, low biased, for 4,6-Dinitro-ortho-cresol and Dimethyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270E_QQQ: Surrogate recovery for the following sample was outside control limits: ROST4PZC-ROX-101525 (400-284249-3). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.
