RCRA FACILITY GROUNDWATER, LEACHATE AND GAS REPORTING FORM

This form must be used as a cover sheet for the notices and reports, identified below as required by: (1) a facility's RCRA interim status closure plan; (2) the RCRA interim status regulations; or (3) a facility's RCRA permit. All reports must be submitted to the Illinois EPA's Bureau of Land Permit Section. This form is for use by Hazardous Waste facilities only. Reporting for Solid Waste facilities should be submitted on a separate form. All reports submitted to the Illinois EPA's Bureau of Land Permit Section must contain an original, plus a minimum of two copies.

Note: This form is not to be used with permit or closure plan modification requests. The facility's approved permit or closure plan will state whether the document you are submitting is required as a report or a modification request.

Facility Name: Equilon Enterprises LLC dba Shell Oil Products US

Facility Address: 900 South Central Ave., Roxana, IL 62048

Site ID #: 1191150002 Fed ID #: ILD 080 012 305

Check the appropriate heading. Only one heading may be checked for each corresponding submittal. Check the appropriate sub-heading, where applicable. Attach the original and all copies behind this form.

Log No. B-43R; B-43R-CA-21

Dear Mr. Rhoades:

On behalf of Shell Oil Products US (Shell), AECOM Technical Services, Inc. (AECOM) is submitting the enclosed referenced reports and RCRA Facility Groundwater, Leachate and Gas Reporting Form for your review. The WRR report is required under Sections IV.J.7 and IV.J.14 of the RCRA Part B Permit. The Village of Roxana sampling and report is required by Condition 7 of the Agency's letter dated August 5, 2010.

Electronic copies of the referenced report are being submitted separately directly to Ms. Dana Austin, Mr. Gary Ko, and IEPA Collinsville FOS (Ali Al-Janabi) with Illinois Environmental Protection Agency (IEPA). The LPC-160 electronic data forms will be submitted separately via email.

If you have any questions during your review, please contact Leroy (Buddy) Bealer, Shell Principal Program Manager, at leroy.bealer@shell.com (484/632-7955), or Wendy Pennington at wendy.pennington@aecom.com (314/452-8929).

Yours sincerely,

AECOM, on behalf of Shell Oil Products US

1 Introduction and Regulatory Updates

AECOM Technical Services, Inc. (AECOM) is submitting this report on behalf of Equilon Enterprises, LLC d/b/a Shell Oil Products US (Shell) for the following in fulfillment of Conditions IV(I)(2) and V(D)(3)(iii) of Shell's Resource Conservation and Recovery Act (RCRA) Hazardous Waste Management Post-Closure Permit (Permit) [Log B-43R most recently modified and reissued August 20, 2025] and to meet the requirements of the Village of Roxana Interim Groundwater Monitoring Program.

- 2nd Half 2025 (2H25) groundwater monitoring well gauging and sampling activities conducted at the WRB Refining LP (WRB) Wood River Refinery (WRR) in Roxana, Illinois; and
- 3rd and 4th Quarters 2025 (3Q25 and 4Q25) groundwater monitoring well gauging and sampling conducted in the Village of Roxana, Illinois.

The locations of the sites are shown in **Figure 1**. Activities within the facility were conducted in cooperation with the current operator of the WRR, Phillips 66 (P66).

1.1 WRR Groundwater Monitoring Program

The Corrective Action Plan (CAP) for the Main and North properties of the WRR has been in place since the issuance of the Permit in November 1989 to mitigate potential impact on human health and the environment. The CAP includes continued pumping and treatment of groundwater from groundwater production wells to maintain an inward gradient. The CAP also requires the removal of the hydrocarbon layer on top of the water table, which is predominantly done via skimmer wells. A groundwater management zone (GMZ) for the facility has been in place since the reissuance of a modified Permit in August 2025, in order to encompass both on-site and off-site contamination being monitored by the preexisting WRR Groundwater Monitoring Program and Roxana Interim Groundwater Monitoring Program. The off-site portion of the GMZ is currently conditionally approved. The locations of groundwater monitoring, groundwater production, and skimmer wells at the facility, as well as the GMZ boundary, are shown in **Figure 2.**

Shell's current Permit at the WRR was issued by Illinois Environmental Protection Agency (IEPA) on September 23, 2010, was effective beginning October 28, 2010, and expired October 28, 2020 (Log B-43R) (IEPA, 2010b). The Permit was then modified and reissued on the following dates:

- April 2, 2013,
- June 13, 2014,
- November 25, 2014,
- July 29, 2015,
- December 20, 2019,
- March 28, 2022,
- October 31, 2022, and
- August 20, 2025 (reissuance of July 8, 2025 modification).

A Permit renewal application (Log No. B-43R2) was submitted to IEPA on April 29, 2020 in accordance with Condition VI(B)(6) of the Permit and a letter from IEPA dated November 6, 2019 (AECOM, 2020a) (IEPA, 2019a). On June 30, 2020, IEPA issued a Notice of Incompleteness (NOI) letter after conducting a completeness review of the Permit renewal application (IEPA, 2020a); AECOM submitted the Permit Application Completeness Response to IEPA on September 4, 2020 (AECOM, 2020b). IEPA issued a letter on October 30, 2020 indicating they have determined the application to be complete and that technical review would begin (IEPA, 2020b).

The bulleted list below summarizes Permit-related correspondence between AECOM, on behalf of Shell, and the IEPA during this semi-annual reporting period (July 2025 through December 2025); prior WRR related correspondence which has not yet been addressed by IEPA can be found in **Appendix A-1**.

- A letter from IEPA dated July 8, 2025, and reissued August 20, 2025 (M-32, -44, -53, and CA-93) provided conditional approval and comments related to several Permit Modifications requests and included a modified Permit (IEPA, 2025b). The approval of the proposed GMZ incorporated Roxana Interim Program groundwater monitoring wells MW-1, MW-3, MW-5, MW-6 A through D, MW-10, MW-11, MW-14, MW-16, MW-22, MW-26, MW-28, and ROST-3-MW into the GMZ boundary as off-site wells. The modified permit also approved the combining of the routine reports for the Roxana Interim Groundwater Monitoring Program with the WRR reports required in Section IV of the Permit.
- On August 22, 2025, AECOM, on behalf of Shell, submitted a revised Table C-6 Groundwater Sampling Parameters for the RCRA Post-Closure Permit Renewal Application.
- On October 17, 2025, AECOM, on behalf of Shell, submitted a Class 1* Permit Modification Request to update the concentration limits in Condition IV(D)(1) of the Permit based on the revised Groundwater Quality Standards (GQSs) released earlier in 2025.
- On November 4, 2025, AECOM, on behalf of Shell, submitted a Class 1* Permit Modification Request with a proposal for new onsite wells for LNAPL monitoring.
- On November 5, 2025, AECOM, on behalf of Shell, issued a notice of modified Permit to those on the Permit mailing list.
- On December 19, 2025, AECOM, on behalf of Shell issued a Class 1* Permit Modification Request to update the Annual Corrective Action Plan (CAP) Effectiveness Report due date in the Permit in conjunction with specific response to comments in the August 20, 2025, modified Permit issuance letter from IEPA.
- AECOM, on behalf of Shell, continues to submit weekly groundwater pumping and oil recovery well status information, provided by P66, to IEPA via email. Each week, these inspections are performed by P66, and information is provided to Shell and AECOM for submittal to the IEPA in accordance with the July 21, 2015 proposed Compliance Commitment Agreement (CCA).

1.2 Roxana Interim Groundwater Monitoring Program

The Village of Roxana Interim Groundwater Monitoring Program was established based on direction from Illinois Environmental Protection Agency (IEPA) dated August 5, 2010 (IEPA, 2010a). The study area within the Village of Roxana (Village) is generally bounded by the alley north of First Street, Illinois Route 111, the West Fenceline of the WRR, and the Roxana Former Public Works Yard (FPWY). Some groundwater monitoring wells within the WRR were also sampled as part of this event. **Figure 3** shows the groundwater monitoring wells that are part of the Village interim monitoring well network.

There was no Interim Groundwater Monitoring Program-related regulatory correspondence between AECOM, on behalf of Shell, and the IEPA during this reporting period (July 2025 through December 2025) except for the GMZ related correspondences discussed above; prior Village related regulatory correspondences can be found in **Appendix A-2**.

2 Investigative Procedures

Groundwater gauging was conducted in the 3rd Quarter 2025 (3Q25) and 4th Quarter 2025 (4Q25). Groundwater samples were collected and analyzed during 4Q25 to meet the requirements of the semi-annual CAP groundwater monitoring program, and during 3Q25 and 4Q25 to meet the requirements of the Interim Groundwater Monitoring Program. Groundwater samples and gauging data were collected using the most current AECOM standard operating procedures (SOPs) for the project, previously provided to the IEPA.

Shell has contracted AECOM to conduct the quarterly gauging and semi-annual sampling activities required by the Permit for hazardous waste management post-closure care at the WRR, and the quarterly gauging and sampling activities required by the Interim Groundwater Monitoring Program as outlined in the IEPA's letter dated August 5, 2010 (IEPA, 2010a) described in **Section 1**, and as modified based on other correspondence described in **Appendix A-2.** This section summarizes the field activities, sample handling and control, laboratory analysis, and data review conducted for these events.

2.1 Health & Safety

The quarterly gauging and sampling activities were performed in general accordance with the current project-specific Health and Safety Plan (HASP), dated January 17, 2025 (AECOM, 2025a).

2.2 Additional Activities or Modifications

The following additional work activities were conducted during 3Q25 and 4Q25.

- During the comprehensive 3Q25 quarterly groundwater gauging event, LNAPL was observed in groundwater monitoring well ROST-4-PZ(D). Fluid level measurements were collected weekly from ROST-4-PZ(D) as outlined in the IEPA's letter dated March 14, 2012 (IEPA, 2012a). On September 10, 2025, after two consecutive weeks of no LNAPL observed in the well, the weekly gauging of ROST-4-PZ(D) ceased.

2.3 Groundwater Monitoring Well Gauging and Sampling

2.3.1 Groundwater Monitoring Well Gauging

Monitoring wells located on portions of the refinery known as North Property, Main Property, West Property, and Riverfront Property, and monitoring wells located in the Village of Roxana, are gauged each quarter in accordance with Permit (Condition IV(D)(1)) and the Roxana Interim Groundwater Monitoring Program.

The 3Q25 and 4Q25 comprehensive quarterly groundwater monitoring well gauging events were conducted between July 1st and 3rd, 2025 and October 1st and 3rd, 2025, respectively. Gauging activities for WRR and the Roxana Interim Groundwater Monitoring Program were conducted to evaluate groundwater flow direction and assess the potential presence of LNAPL (Light Non-Aqueous Phase Liquid) in the refinery and Village. Depth to LNAPL (if present) and depth to water were noted in electronic format and on groundwater field gauging sheets. If LNAPL was encountered with the interface probe, it was confirmed either by visual observation of residue on the interface probe or checked with a clear bailer. Quarterly groundwater monitoring well gauging results can be found in **Table 1a**. Weekly groundwater monitoring well gauging results can be found in **Table 1b**. The groundwater gauging data table also includes well-head PID (photoionization detector) results.

2.3.2 WRR Semi-Annual Groundwater Purging and Sampling

Groundwater samples were collected from October 6th through 20th, 2025 from Main and North Property groundwater monitoring wells that are required to be sampled semi-annually in accordance with the Permit. Data are included in this report and discussed in **Section 3**.

Groundwater monitoring wells P-01, P-4U, P-6U, P-7U, P-8U, P-014, P-15, P-16, P-17, P-43, P-83A-D, P-84A-D, P-86A-D, P-93D, P-94, and T-1 on the North Property; and P-81A-D, P-82A-D, P-88A-D, and P-95 on the Main Property were purged and sampled using dedicated Well Wizards® and dedicated bonded polyethylene tubing.

Groundwater monitoring wells without dedicated pumps were sampled using a stainless-steel submersible pump and designated[1] polyethylene tubing. These groundwater monitoring wells included: P-56, P-59, P-60, P-85B-D, P-87B-D, P-93A-C, T-12, T-13, and T-41 on the North Property. Groundwater monitoring well P-55R also does not contain a dedicated pump but was not sampled due to the presence of LNAPL

Purging of each well continues until a minimum of three well volumes of water is removed or until the well purges dry, whichever occurs first. In 2H25, monitoring wells P-85B, P-87B, and P-87D were purged dry and sampled after sufficient recharge within 48 hours. Water quality parameters are then measured as required by the Permit and field parameters are recorded in electronic format and on groundwater sampling field data sheets.

For both dedicated and non-dedicated pumps, the sample stream was adjusted to a flow rate to minimize aeration and splashing during sample collection. The samples were placed into the appropriate bottles furnished by the laboratory, which contained preservatives when appropriate. Samples collected for dissolved metal analysis were filtered in the field using 0.45-micron in-line disposable filters.

Groundwater field parameter results (pH, temperature, conductivity, and turbidity) were recorded and can be found in **Table 2a**.

Groundwater monitoring wells P-56, P-59, P-93A-D, and T-12 are sampled as part of both the WRR and the Roxana Interim Groundwater Monitoring programs. For these wells, low-flow sampling methods, which are used in the Interim Groundwater Monitoring Program, are utilized.

Fifteen Roxana Interim Groundwater Monitoring Program wells, MW-1; MW-3; MW-5; MW-6A-D; MW-10; MW-11; MW-16; MW-24; MW-22; MW-26; MW-28; and ROST-3-MW, located in the Village and on Main Property, are included in the Permit as GMZ boundary wells. Per the Permit, these wells are sampled only for Interim Program analytes and using low-flow methods. Groundwater field parameter and sampling data for these wells are discussed within the Roxana Quarterly Groundwater sections of this report and indicated and included on **Table 2b and 3b,** respectively.

2.3.3 Roxana Quarterly Groundwater Purging and Sampling

Groundwater samples were collected from July 7th through 15th, 2025 for 3Q25 and between October 6th through 21st, 2025 for 4Q25 from Village, North, Main, and West Property groundwater monitoring wells that are required to be sampled quarterly in accordance with the Interim Groundwater Monitoring program. Data are included in this report and discussed in **Section 3**.

Groundwater monitoring wells MW-1 through MW-6A-D; MW-9 through MW-14; MW-16; MW-22 through MW-28; P-54; P-56 through P-59; P-74; P-93A, B, and C; P-114R; ROST-3-MW; ROST-4-PZ(C); ROST-4-PZ(E); ROST-4-PZ(G); and T-12 were purged and sampled using a stainless-steel submersible pump and designated[1] polyethylene tubing.

Groundwater monitoring well P-93D was purged and sampled using a dedicated stainless-steel QED Environmental Systems (QED) Well Wizard® groundwater sampling pump and dedicated bonded polyethylene tubing.

For both sampling methods pumping was performed at a low flow rate (≤ 300 mL/minute) to minimize drawdown of the water level within the groundwater monitoring well. During groundwater purging, water quality parameters (pH, temperature, specific conductivity, turbidity, dissolved oxygen (DO), and oxidation-reduction potential (ORP)) were measured and recorded after every flow-through cell volume. Once stabilization was achieved or a maximum purge

[1] Tubing is designated to a specific groundwater monitoring well and is placed in individual closed plastic bags for storage between sampling events; designated tubing used with Proactive™ Stainless Steel Monsoon pump technology is replaced annually prior to the first quarter sampling event.

time of two hours was reached, groundwater samples were collected for VOCs and semi-volatile organic compound (SVOC) analysis.

Groundwater monitoring wells located inside the WRR and designated for sampling in the Interim Groundwater Monitoring Program, P-55R, P-66, and P-68, contained LNAPL when gauged and, therefore, were not sampled.

Groundwater monitoring well MW-7, located within the Roxana Former Public Works Yard was not sampled in 3Q25 or 4Q25 due to operation of the PWY steam enhanced extraction (SEE) System, as approved in the August 22, 2022 IEPA letter (IEPA, 2022b) in response to the PWY SEE Work Plan (AECOM, 2022a). Groundwater monitoring well MW-25, located on 8th Street in the Village, was not sampled due in 4Q25 to elevated groundwater temperatures measured in the well.

Groundwater sampling field parameters can be found in **Table 2b**, and low flow groundwater sampling data sheets for 3Q25 and 4Q25 are included in **Appendix B-1 and B-2,** respectively.

2.4 Decontamination and Investigation-Derived Waste

Decontamination

Field personnel and equipment underwent decontamination procedures in accordance with project SOPs to ensure the health and safety of those present, to maintain sample integrity, and to minimize cross contamination.

Dedicated and designated sampling equipment does not require decontamination. Dedicated equipment is left in place between sampling events and includes the Well Wizard® pumps and associated tubing. Reusable sampling equipment (e.g., groundwater pump) was decontaminated after each sample location.

Investigation-Derived Waste (IDW)

Decontamination fluid and purge water related to, or generated from, work within the WRR was collected and discharged, per a P66 discharge permit, to the WRR National Pollutant Discharge Elimination System (NPDES)-permitted Wastewater Treatment Plant (WWTP).

Purge water and decontamination fluid generated during groundwater sampling activities in the Village was collected, staged, and disposed in accordance with RCRA, Illinois and United States Department of Transportation (DOT) regulations. Decontamination fluid and purge water from groundwater monitoring wells MW-4, MW-7, and MW-25 are managed as hazardous waste based on prior characterization in conjunction with generator knowledge, and decontamination fluid and purge water from other groundwater monitoring wells in the Village are managed as non-hazardous waste based on prior characterization in conjunction with generator knowledge; both hazardous and non-hazardous waste were disposed at the Arcwood Environmental (formerly Heritage) facility in Indianapolis, Indiana.

Expendable materials (e.g., disposable sampling equipment such as gloves and tubing) were decontaminated, if necessary, collected in trash bags, and disposed as municipal waste.

2.5 Groundwater Sample Handling and Laboratory Testing

Groundwater samples were collected in pre-preserved laboratory-supplied containers and labeled in the field. Sample information was recorded on a chain of custody (COC) form at the time of collection. The sample identification data (ID) format is “[well ID]-[project name]-[date]”. COCs are included with the laboratory analytical reports in **Appendix C-1 through C-3**.

Upon collection and labeling, sample containers were immediately placed inside an iced cooler and packed in such a way as to help prevent breakage and maintain sample temperature within 0-6°C without freezing. The samples were then shipped via overnight courier, under the proper COC documentation, to Eurofins Environment Testing America Southeast, LLC (EETA Southeast) [formerly TestAmerica Laboratories] in Pensacola, Florida, for analysis.

2.5.1 WRR Semi-Annual CAP Groundwater Monitoring Program

The following test methods were used for groundwater analysis during this scope of work for WRR program monitoring wells:

- VOCs (benzene, ethylbenzene, toluene, xylenes, and naphthalene, only) via USEPA Method 8260D;
- SVOCs (phenol, only) via USEPA Method 8270E Triple Quadrupole (QQQ);
- PAHs (2-methylnaphthalene, only) via USEPA Method 8270E Low-Level Triple Quadrupole (LL_QQQ); and
- Dissolved Metals[2] (arsenic, barium, cobalt, lead, nickel, and vanadium, only) via USEPA Method 6010D.

The reporting lists for these analyses are specified in Condition IV(F)(1) of the Permit. Concentration limits for these analyses are specified in Condition IV(E)(1) of the Permit. Groundwater quality standards provided in 35 I.A.C. 620, Subpart D were updated effective March 28, 2025. Analytical results collected before this date are compared against prior screening values applicable at time of sampling. Analytical results collected beginning in 2Q2025 are compared against the updated GQS effective March 28, 2025. A Class 1* Permit Modification to update the concentration limits in Condition IV(D)(1) of the Permit based on the revised 2025 GQSs was submitted on October 17, 2025. Reporting limits are based on laboratory method detection limit studies and are subject to change.

2.5.2 Roxana Quarterly Interim Groundwater Monitoring Program

The following test methods were used for groundwater analysis during this scope of work for Interim Program monitoring wells:

- VOCs via USEPA Method 8260D;
- 1,2-dibromoethane (EDB) and 1,2-dibromo-3-chloropropane via USEPA Method 8260D Selected Ion Monitoring (SIM);
- SVOCs via USEPA Method 8270E QQQ; and
- PAHs via USEPA Method 8270E LL_QQQ.

USEPA Method 8260D SIM was used for select VOCs (1,2-dibromoethane and 1,2-dibromo-3-chloropropane) in order to achieve lower reporting limits specified in the most recent version of the Permit. Per direction from IEPA, the Interim Groundwater Monitoring Program concentration limits need to be consistent with those in the Permit.

2.6 Data Quality Review and Data Management

Laboratory data were provided in electronic form and included data qualifiers on the basis of the laboratory's quality control or to indicate sample analysis information. Analytical data were independently reviewed and qualified by AECOM. One hundred percent of the data was subjected to a data quality review. Evaluation of the groundwater analytical data followed procedures outlined in the USEPA National Functional Guidelines for Superfund Organic Methods Data Review 2020 (USEPA, 2020a) and USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review 2020 (USEPA, 2020b). Data qualifiers were also added by AECOM, as appropriate, and are included on **Table 3a and 3b** and in the laboratory results in **Appendix C-1 through C-3**. The results of the data quality review are discussed in **Section 3.3**.

Field data and documentation collected as part of this scope of work becomes part of the project file. AECOM maintains the files for the site and the database management system.

The electronic data submittals required by the Permit will be submitted separately from this report. Electronic data for off-site GMZ boundary wells will be submitted when IEPA ID numbers have been assigned to the wells.

[2] Dissolved metals are field-filtered using a new 0.45 micron in-line disposable filter at each monitoring well.

3 Investigative Results

Quarterly groundwater gauging and semi-annual sampling activities are required by the Permit at the WRR. Quarterly groundwater gauging and quarterly sampling activities are required by the Roxana Interim Groundwater Monitoring Program. This section summarizes the results of the two groundwater monitoring programs for 3Q25 and 4Q25. The results of 3Q25 activities were also summarized in the Interim Groundwater Monitoring Program – 3rd Quarter 2025 – Roxana, Illinois report (AECOM, 2025b).

3.1 Groundwater Monitoring Well Gauging Results

The 3Q25 and 4Q25 comprehensive quarterly groundwater monitoring well gauging events were conducted between July 1st and 3rd, 2025 and October 1st and 3rd, 2025, respectively. Data from these gauging events are included in **Table 1a**. The groundwater potentiometric maps for the 3Q25 and 4Q25 comprehensive gauging events, which show groundwater elevations and flow conditions, are presented in **Figures 4a, 4b, 5a, and 5b**, respectively. The potentiometric surface observed during 3Q25 and 4Q25 groundwater monitoring well gauging illustrates an inward gradient with groundwater flow toward the groundwater production wells in the interior of the WRR.

Groundwater levels rose approximately 0.4 foot in the central and eastern portions of the refinery during 2H25. Groundwater levels rose approximately 1.0 foot in the vicinity of the West Fenceline during 2H25. Groundwater levels were above the top of the screens in the majority of the monitoring wells gauged during the 3Q25 and 4Q25 events. Therefore, it is suspected that some of the LNAPL measurements are likely indicative of LNAPL trapped in the monitoring well casing. **Figures 6 and 7** illustrate the measured LNAPL thickness observed during the 3Q25 and 4Q25 gauging events, respectively. Measured LNAPL thickness and the number of locations where it was observed during the 2H25 quarterly gauging events was generally comparable to that observed in 1H25.

During 2H25, LNAPL was observed in groundwater monitoring wells P-55R, P-61, P-62, P-64, P-68, P-70, S-1, and T-24 located on WRR property at a thickness greater than 0.10 feet and was removed using bailers[3]. The recovered LNAPL was placed in a metal drum and will be recycled at the WRR.

Buckeye Pipeline Release

The Illinois Emergency Management Agency (IEMA) was notified on November 22, 2020, of a release of gasoline from a Buckeye Partners (Wood River Pipeline, LLC) pipeline located to the south of well P-58 along the WRR West Fenceline, and to the north of well P-66 on WRR Main Property. The release is associated with IEPA Violation Notice L-2021-00084, LPC #1190905036 – Madison County. Groundwater monitoring wells P-58 and P-66 have yielded some anomalous observations/detections since the reported release; LNAPL has been detected in P-66 beginning in 2nd Quarter 2022 (2Q22), having not previously been detected since 4th Quarter 2012 (4Q12). These wells will be gauged, and sampled in the absence of LNAPL, during the quarterly Roxana Interim Groundwater Monitoring program events. The approximate location of the Buckeye Pipeline release is indicated on **Figure 3.**

3.2 Groundwater Flow Rate, Direction, and Control

As required by Condition IV(I)(7) of the Permit, the groundwater flow rate and direction were determined using the quarterly gauging data and corresponding contours. The groundwater contours were used to calculate a gradient, which was then used in conjunction with Darcy's Law to calculate a flow velocity (0.137 ft/day for 3Q25, and 0.127 ft/day for 4Q25). These calculations are presented in **Table 5**. The groundwater flow direction can be observed on the potentiometric surface maps for 3Q25 and 4Q25 (**Figures 4a and 5a**, respectively). These maps illustrate overall groundwater capture by the WRR pumping centers, as required by the Permit.

3.3 Data Quality Review Results

Analytical results qualified by AECOM are specified in the data reviews presented in **Appendix C-1 through C-3.**

[3] LNAPL > 0.10 feet is a project specific criterion for removal, based on practicality with the removal technique.

3.3.1 WRR Semi-Annual CAP Groundwater Monitoring Program

A total of 11 sample delivery groups (SDGs) were prepared and sent to EETA Southeast for the 2H25 event. Sixty-seven different groundwater sample sets were prepared and analyzed for VOCs, SVOCs (including PAHs), and dissolved metals. The 67 samples included 53 different investigative sample sets, six field duplicate sets, and three matrix spike/matrix spike duplicate (MS/MSD) sets. Results are included in **Table 3a** and in the SDGs presented in **Appendix C-1**.

Trip blanks (TBs), equipment blanks (EBs), and laboratory method blanks were analyzed to evaluate for the existence and magnitude of any contamination resulting from field and laboratory activities. Two EB sets were collected for 2H25, and a TB set was included in every cooler that contained samples for VOC analysis. A total of 11 TB sets were analyzed for groundwater VOCs. Laboratory method blanks were analyzed with every analytical batch.

Based on laboratory control sample (LCS), MS/MSD, surrogate, holding time, and field duplicate criteria, the groundwater results reported for the analyses performed during this reporting period were accepted for their intended use.

3.3.2 Roxana Quarterly Interim Groundwater Monitoring Program

A total of 8 SDGs for the 3Q25 event and 15 SDGs for the 4Q25 event were prepared and sent to EETA Southeast. For the 3Q25 event, fifty different groundwater sample sets were prepared and analyzed for VOCs and SVOCs (including PAHs). The 50 samples included 39 different investigative sample sets, five field duplicate sets, and three MS/MSD sets. For the 3Q25 event, forty-nine different groundwater sample sets were prepared and analyzed for VOCs and SVOCs (including PAHs). The 49 samples included 38 different investigative sample sets, five field duplicate sets, and three MS/MSD sets. Additionally, monitoring wells MW-4 and MW-24 were resampled on December 10, 2025 (4Q25 event) due to anomalous results from the initial samples. Resample results for MW-24 were comparable with historical results; original results and resample results are included in SDGs 400-283945-R1, 400-284491-1 and 400-287334-1 respectively. Results are included in **Table 3b** and in the SDGs for 3Q25 and 4Q25 presented in **Appendix C-2 and C-3,** respectively.

Five different EB sets were collected for 3Q25, and six different EB sets collected for 4Q25. A total of 13 TB sets for 3Q25, and 15 TB sets for 4Q25 were analyzed for groundwater VOCs. Laboratory method blanks were analyzed with every analytical batch.

Based on LCS, MS/MSD, surrogate, holding time, and field duplicate criteria, the groundwater analytical results reported were accepted for their intended use.

3.4 Groundwater Analytical Results

3.4.1 WRR Semi-Annual CAP Groundwater Monitoring Program

The laboratory analytical results for the groundwater samples collected during the 2H25 event are presented in **Table 3a**. Analytical detections were compared to the concentration limits as provided in Condition IV(E) of the Permit. These concentration limits include, but are not limited to, the GQSs for Class I: Potable Resource Groundwater (35 IAC 620, Subpart D, Section 410) (Part 620); the IEPA Tiered Approach to Corrective Action Objectives (TACO) Tier 1 Groundwater Remediation Objectives for the Groundwater Component of the Groundwater Ingestion Route (35 IAC 742 Appendix B, Table E); and the IEPA Toxicity Assessment Unit (Chemicals not in TACO, Tier 1 Tables). Where multiple screening values for a given analyte were present in the above sources, screening values from Part 620 were used preferentially over the screening values found in TACO and analytes not in TACO sources. All three sources are checked on a quarterly basis to ensure the most current published screening values are being used. The references listed here do not provide screening values for dissolved metals. The results of this screening comparison are presented in **Table 3a**.

Samples from 7 groundwater monitoring wells in the WRR groundwater monitoring program located on the North Property exhibited exceedances of the groundwater screening criteria for one or more of the following constituents:

- Benzene
- 2-Methylnaphthalene
- Phenol

For specific locations of the monitoring wells where these exceedances occurred, refer to **Figure 10**. At monitoring wells P-93A and P-93B, Phenol was detected in the method blank, indicating possible lab contamination. Phenol results at these wells were at concentrations greater than five times the associated blank concentration. At monitoring well P-87C, benzene exceeded screening criteria, but at an estimated concentration. These findings are generally consistent with the results from previous sampling events. Updated GQSs for Class I: Potable Resource Groundwater Part 620 effective March 28, 2025, have resulted in exceedances at wells and for metals that have not previously exceeded screening criteria, primarily cobalt, nickel, and vanadium. In comparison with 1H24 sampling, under the prior GQSs, where samples from a total of 14 groundwater monitoring wells in the WRR groundwater monitoring program exhibited exceedances of the groundwater screening criteria for one or more constituents, a total of 28 groundwater monitoring wells exhibited exceedances in 1H25 under the updated GQSs.

Figure 17 presents a west to east cross-section of the Main Property of the WRR with a vertical distribution of the benzene analytical results in groundwater superimposed. **Figure 18** presents a north to south cross-section of the Main Property of the WRR with a vertical distribution of the benzene analytical results in groundwater superimposed.

As required by 35 Ill. Adm. Code 742.805(c), 620.615, and 742.805(d), where Part 742 applies, and Condition IV(D)(1)(a) of the Permit, in addition to meeting the individual Class I groundwater standards, as applicable, equations of mixtures for similar acting non-carcinogenic and carcinogenic substances for 2H25 sampling are calculated and included in **Tables 4a and 4b,** respectively**.**

3.4.2 Roxana Quarterly Interim Groundwater Monitoring Program

The laboratory analytical results for the groundwater samples collected during the 3Q25 and 4Q25 events are presented in **Table 3b**. Analytical detections were compared to the concentration limits as provided in Condition IV(E)(1) of the Permit for the WRB Wood River Refinery[4]. These concentration limits include the GQSs for Class I: Potable Resource Groundwater (35 IAC 620, Subpart D, Section 410) (Part 620) (IEPA, 2012c), the IEPA TACO Tier 1 Groundwater Remediation Objectives for the Groundwater Component of the Groundwater Ingestion Route (35 IAC 742, Appendix B, Table E) (IEPA, 2007), and the IEPA Toxicity Assessment Unit (Chemicals not in TACO, Tier 1 Tables) (IEPA, 2023). Where multiple screening values for a given analyte were present in the above sources, screening values from Part 620 were used preferentially over the screening values found in TACO and chemicals not in TACO sources. All three sources are checked on a quarterly basis to ensure the most current published screening values are being used. The results of this screening comparison are presented in **Table 3b**.

In 3Q25, samples from 13 groundwater monitoring wells in the Interim Groundwater Monitoring Program (four in the Village, nine in the WRR along the West Fenceline) exhibited exceedances of the groundwater screening criteria for one or more of the following constituents:

- Benzene
- 1,2,4-Trimethylbenzene
- Phenol
- Naphthalene
- 2-Methylnaphthalene

In 4Q25, samples from 11 groundwater monitoring wells in the Interim Groundwater Monitoring Program (three in the Village, eight in the WRR along the West Fenceline) exhibited exceedances of the groundwater screening criteria for one or more of the following constituents:

- Benzene
- 1,2,4-Trimethylbenzene
- 3 & 4-Methylphenol
- Chloroform
- 2-Methylnaphthalene
- Phenol

[4] IEPA requested that the Interim Groundwater Monitoring Program be consistent with the RCRA Part B Permit.

Figures 8 and 9 present concentrations of analytes that exceeded the indicated screening criteria for 3Q25 and 4Q25, respectively. In 4Q25, at monitoring wells P-93A and P-93B, Phenol was detected in the method blank, indicating possible lab contamination. Phenol results at these wells were at concentrations greater than five times the associated blank concentration. In 4Q25, at monitoring well MW-4, chloroform exceeded screening criteria, but at an estimated concentration. These findings are generally consistent with the results from previous sampling events, with the exception of benzene and phenol in MW-4 and MW-25, discussed in further detail below.

Figures 11 and 12 present a plan view depiction of benzene analytical results in groundwater across the site for 3Q25 and 4Q25, respectively. **Figures 13 and 14** presents a cross-section along Chaffer Avenue with a vertical distribution of the benzene concentrations in groundwater superimposed for 3Q25 and 4Q25, respectively. **Figures 15 and 16** presents a cross-section across the Roxana Former Public Works Yard with a vertical distribution of the benzene analytical results in groundwater superimposed for 3Q25 and 4Q25, respectively.

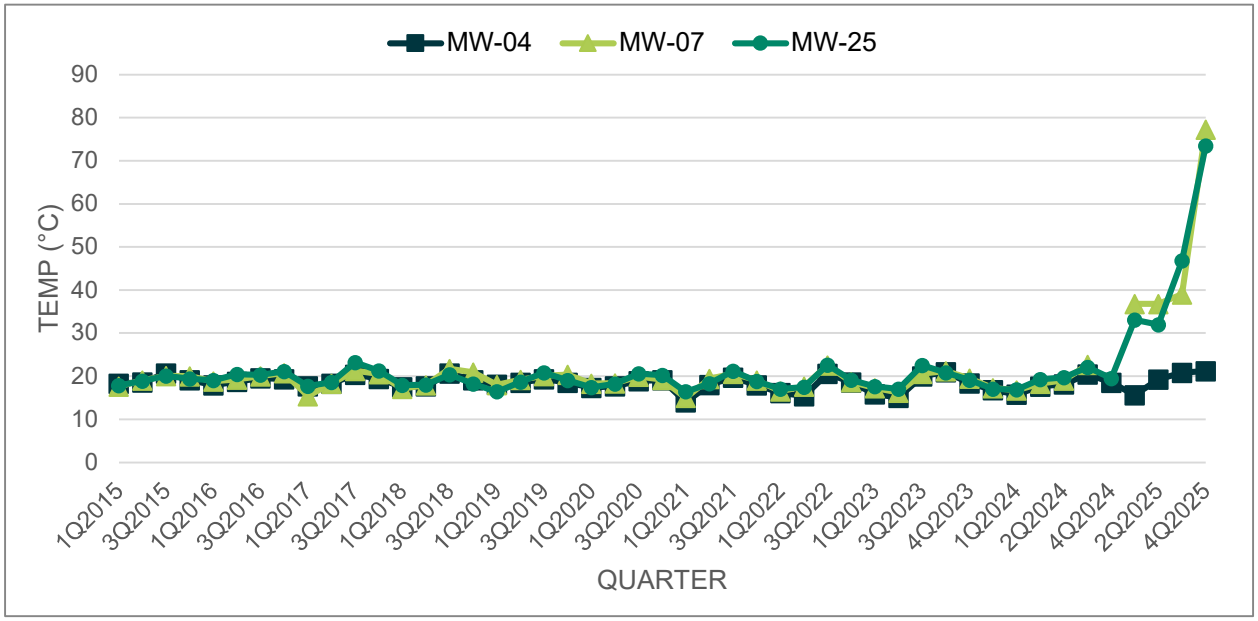
Appendix D-1 contains benzene concentration trend plots for selected monitoring wells[5] to represent groundwater conditions in the 4th Street area and Former Public Works Yard area, respectively:

- 4th Street area – MW-22, ROST-4 PZ(C), P-59, and T-12
- Former Public Works Yard area – MW-7, MW-25, and P-57

Beginning in 2Q21, a Mann-Kendall analysis of the analytical benzene results from the seven sampled groundwater wells in the 4th Street and Former Public Works Yard areas was conducted. The Mann-Kendall analysis was performed using GWSDAT (GroundWater Spatio-Temporal Data Analysis Tool). As of 4Q25, statistically significant downward trends were displayed for six wells, zero wells displayed statistically significant increasing trends, and one well displayed a trend that is not statistically significant[6]. Results from the Mann-Kendall analysis conducted via GWSDAT are presented in **Appendix D-2**.

Monitoring Wells MW-4 and MW-25

The benzene and phenol concentrations in MW-25 during 3Q25 continued to be outside the historical range for monitoring well MW-25, as first observed during 1Q25. Benzene and phenol results were confirmed by the lab and in a duplicate sample. During 4Q25, MW-25 was unable to be sampled due to the elevated groundwater temperatures within the well. Steam injection at the FPWY associated with the SEE system first began in July 2024. The 1Q25 sampling event was performed approximately three months after operation of the SEE system was temporarily paused for repairs and winterization (10/21/2024). The 2Q25 sampling event was performed approximately 3 weeks after operation of the extraction portion of the SEE system restarted (end of March 2025). The 3Q25 sampling event was performed approximately 4 months after the extraction portion and 3 months after the steam injection portion of the SEE system restarted (end of March 2025 and early May 2025 respectively). The steam injection portion of the SEE system did not run continuously during June and July 2025.



Temperature readings from MW-25 since the 1Q25 sampling event have been elevated. During 4Q25, MW-25 was unable to be sampled due to the elevated groundwater temperatures within the well. Groundwater flow direction in the vicinity of the former PWY during continues to be to the north-northeast, towards the WRR (**Figures 4a, 4b, 5a, and 5b**). This information indicates that, in the absence of SEE system operation, groundwater at the former PWY continues to be captured by the existing WRR groundwater production system. The groundwater monitoring wells surrounding MW-25 (MW-5, MW-3, and MW-4) did not indicate elevated analytical results nor elevated temperature readings in 1Q25 and 2Q25.

In 3Q25, benzene and phenol concentrations observed in MW-4 were outside of the recent range for the monitoring well, but within the overall historical range for MW-4. In 4Q25, benzene concentrations observed in MW-4 were outside of the historical range for the monitoring well. Benzene results were confirmed by the lab and in both a duplicate sample and confirmation sample. Temperature readings from MW-4 have not been elevated. Well MW-7, which is located within the footprint of the SEE system, indicated elevated temperature readings, but the elevated benzene analytical results at this location were comparable to historic results at this location. Due to operation of the

[5] In a meeting with IEPA on April 5, 2018, the AECOM presentation included benzene concentration trend plots pertinent to GMZ discussion. IEPA verbally requested that benzene concentration trend plots for selected monitoring wells be incorporated into Roxana Program quarterly reports.
[6] Results are significant if p value is equal to or below 0.05.

SEE system, MW-7 was not sampled during 3Q25 or 4Q25. The chart below presents groundwater temperatures at wells MW-4, MW-7, and MW-25. Neither the soil vapor monitoring points (SVPs) along 8th Street nor the vapor monitoring probes (VMPs) in the vicinity of MW-4 or MW-25 indicate elevated analytical results or signs of vapor migration. More information related to SEE system operations is included in the monthly SEE progress reports. More information related to VMP sampling is included in the quarterly Soil Vapor reports.

MW-4, MW-7, and MW-25 will be sampled during the 1st and 2nd quarter 2026 (1Q26 and 2Q26) Roxana Interim Groundwater Monitoring Program events if the groundwater temperatures in these wells is below about 50°C.

3.5 Indoor Inhalation Exposure Evaluation Results

Per Condition IV(E)(2)(d) of the Permit, evaluation of indoor inhalation exposure routes was performed for monitoring wells located at the property boundary and at off-site locations with results exceeding 35 Ill. Adm. Code Part 620 and Part 742 Appendix B Table H screening values.

Thirteen groundwater monitoring wells, located along the West Fenceline or off-site of the facility, exhibited exceedances for one or more Class 1 Groundwater screening values during the reporting period, as depicted in **Figures 8, 9, and 10**:

- **MW-4**
- **MW-22**
- **MW-25**
- P-56
- P-57
- **P-58**
- **P-59**
- **P-60**
- **P-93A**
- **P-93B**
- **P-93C**
- ROST-4-PZ(G)
- **T-12**

The locations of monitoring wells, VMPs, and buildings along the West Fenceline and within the Village are shown on **Figure 19.**

Class I Groundwater exceedances from the above monitoring wells were compared to Part 742 Appendix B Table H screening values. 1,2,4-Trimethylbenzene and 3&4-Methylphenol do not have screening values provided in Table H. Results of this comparison are presented in **Appendix E.** Based on these results, 10 of the 13 monitoring wells above displayed exceedances of Table H screening values for one or more of six analytes (Benzene, Chloroform,

Ethylbenzene, Naphthalene, 2-Methylnaphthalene, and Phenol) and were evaluated further – these 10 wells are in **bold** in the list above.

Groundwater elevations (see **Table 1a**) and nearby VMP analytical results (see **Appendix E**) from this reporting period were used to determine whether indoor inhalation exposure routes were incomplete or complete. Cross sections along Chaffer Ave depicting benzene results from VMPs and groundwater elevation results for 3Q25 and 4Q25 are additionally included in **Appendix E**. The results of 3Q25 and 4Q25 soil vapor sampling activities are discussed in detail in the following reports:

- 3rd Quarter 2025 – Soil Vapor Sampling and SVE Monitoring Report, Roxana, IL (AECOM, 2025c)
- 4th Quarter 2025 – Soil Vapor Sampling and SVE Monitoring Report, Roxana, IL (AECOM, 2026)

Building construction information was sourced from the Madison County Illinois GIS viewer[7] and field observations. USEPA technical guidance on petroleum vapor intrusion was also referenced (USEPA, 2013). The USEPA guidance states that a vertical separation distance of at least 6 ft from dissolved vapor sources, measured from the top of the water table to the lowest point of an overlying building, is generally considered sufficient to protect against vapor intrusion and preclude further investigation. For monitoring wells with free-phase or residual LNAPL, a vertical separation distance of 15 ft is recommended. Other studies and publications support the mitigation of vapor intrusion risk based on vertical separation distance from potential vapor source (USEPA, 2013; Lahvis, 2013; Eklund et al, 2024). Guidance for lateral separation distances vary between 30 ft and 100 ft (Eklund et al, 2024). For the purposes of this evaluation, buildings and residences within approximately 100 ft of monitoring wells exhibiting exceedances of Table H screening values were considered. For buildings with a basement, the lowest point of the building was assumed to be 10 ft bgs; for buildings with a crawlspace it was assumed to be 5 ft bgs; for buildings with a slab on grade foundation it was assumed to be 2 ft bgs.

Results of the evaluation indicate that indoor inhalation exposure routes in the vicinity of each of the evaluated monitoring wells are incomplete. LNAPL was not detected in any of the 10 evaluated monitoring wells during this reporting period, nor in any wells within 100 ft of the 10 evaluated wells. It is assumed that the potential vapor source at the evaluated wells for this reporting period is dissolved phase. Groundwater depths in these monitoring wells generally have a vertical separation of 30 ft or more from the lowest point of nearby overlying buildings, which is over 4x the sufficient vertical separation distance for dissolved phase vapor sources (6 ft) provided by the USEPA technical guidance (USEPA, 2015). Further, if LNAPL had been detected within the evaluated areas, the vertical separation of groundwater is 2x or more than the USEPA recommended distance for LNAPL (15 ft). Lastly, the results of quarterly sampling at nearby VMPs during this reporting period were non-detect or below screening criteria for the six analytes that were evaluated.

The following is a summary of the indoor inhalation exposure route evaluation findings for each evaluated monitoring well:

MW-4: Nearby buildings within 100 ft include 134 and 136 E Eighth St, and 135 and 139 E Seventh St. These buildings are single family residences. The residences on Eighth St are split level construction. The residences on Seventh St are constructed on slab. Groundwater levels in this well were approximately 40 to 41 feet below ground surface (ft bgs), which is 30 ft or more of vertical separation from the lowest point of nearby overlying buildings, depending on foundation type. Quarterly sampling results from adjacent VMP-8 were non-detect or below screening criteria for the analytes of concern.

MW-22: Nearby buildings within 100 ft include 125, 126, 129, 131, 132, and 136 E Fourth St. These buildings are single family residences with crawl space, basement, mixed crawl space and slab construction, and unknown constructions, respectively. Groundwater levels in this well were approximately 42 to 43 ft bgs, which is 32 ft or more of vertical separation from the lowest point of nearby overlying buildings, depending on foundation type. Quarterly sampling results from VMP-32 located on Fourth St were non-detect for the analytes of concern.

[7] https://gis.co.madison.il.us/webappspublic/madison%20county%20gis%20viewer/index.html

MW-25: Nearby buildings within 100 ft include 132 E Eighth St, a single family residence with a finished basement, and 134 and 136 E Eighth St, described above. Groundwater levels in this well were approximately 37 to 38 ft bgs, which is 27 ft or more of vertical separation from the lowest point of nearby overlying buildings, depending on foundation type. Quarterly sampling results from VMP-10, located south of MW-25, and VMP-18, located east on Eighth St, were non-detect for the analytes of concern.

P-58: The nearest building is 149 E Eighth St, located within the FPWY approximately 110 ft away. Although it is more than 100 ft from P-58, the evaluation was performed for informational purposes. This building is a former municipal building and storage warehouse constructed on slab. Groundwater levels in this well were approximately 42 to 43 ft bgs, which is 32 ft or more of vertical separation from the nearby overlying building. Quarterly sampling results from VMP-12, located north of P-58, were non-detect or below screening criteria for the analytes of concern.

P-59: Nearby buildings within 100 ft include 148, 149, and 150 E Fifth St. These buildings are single family residences with crawl spaces. Groundwater levels in this well were approximately 44 to 45 ft bgs, which is 34 ft or more of vertical separation from the nearby overlying buildings. Quarterly sampling results from VMPs-4 and -5, located in the alleyways north and south, respectively, of the lots, were non-detect or below screening criteria for the analytes of concern.

P-60: Nearby buildings within 100 ft include 143 E Third St, which is a multi-unit residence with a walk-out basement. Groundwater levels in this well were approximately 42 to 44 ft bgs, which is 32 ft or more of vertical separation from the nearby overlying building. Quarterly sampling results from VMPs -3 and -42 located at the southeast and northeast corners of the lots, respectively, were non-detect or below screening criteria for the analytes of concern. Additionally, monitoring well ROST-4-PZ(E) located on Chaffer St between P-60 and 143 E Third St exhibited no detections or exceedances when sampled in 3Q25 and 4Q25 as part of the Roxana Interim Groundwater Monitoring program.

P-93 A/B/C: The nearest building is 148 E Eighth St, which is a single family residence with split level construction, located approximately 110 ft away. Although it is more than 100 ft from P-93 A/B/C, the evaluation was performed for informational purposes. Groundwater levels in these wells were approximately 43 to 44 ft bgs, which is 33 ft or more of vertical separation from the nearby overlying building. Quarterly sampling results from VMP-9, located on the northeast corner of the lot, and VMP-19, located in front of the house on Eighth St, were non-detect or below screening criteria for the analytes of concern.

T-12: Nearby buildings within 100 ft include 150 E Fourth St, which is an unoccupied garage constructed on slab and owned by Shell. Groundwater levels in this well were approximately 43 to 44 ft bgs, which is 33 ft or more of vertical separation from the nearby overlying building. Quarterly sampling results from VMP-43 located at the southeast corner of the lot were non-detect or below screening criteria for the analytes of concern.

Quarterly soil vapor analytical results for above-mentioned VMPs for this reporting period for the analytes of concern are included in **Appendix E.**

4 Groundwater Production Wells System

P66's crude oil refining process requires water for steam production, fire protection, and cooling. A portion of this necessary water is supplied by groundwater production wells on the North and Main Properties.

Condition IV(A)(1) of the Permit requires "…control of horizontal and vertical groundwater flow in the uppermost aquifer such that the groundwater flow is towards the interior of the facility along the combined boundaries of North and Main Properties." This control is provided by 17 available groundwater production wells located on Main and North properties (**Figure 2**), as listed below:

- Ten wells (Well W-39, -68, -69, -70, -72, -86, -87, -88, -90, and -91) are located primarily between 7th and 11th Streets on North Property and are referred to as the "interior wells" for the purposes of this report.
- Seven wells (Well W-77, -78, -79, -80, -81, -89, and -92) are located near the West Fenceline of Main and North properties and are referred to as the "West Fenceline wells" for the purposes of this report.

Many of these groundwater production wells operate continuously or are available, if needed. These groundwater production wells range in depth from approximately 100 feet to 140 feet. P66 operates these wells with a combined minimum daily average groundwater pumping rate of 3,000 gallons per minute (gpm), which became effective after an August 2011 Permit modification, and was incorporated into the April 2, 2013 revised Permit (Condition IV(F)(2)(a)). The groundwater pumping rate fluctuates above the minimum required pumping rate based on P66's cooling water demand and their need for process water at any given time. Due to variable pumping needs and periodic maintenance, not all wells operate continuously but they are maintained to be operational and available as needed. The water withdrawn from the aquifer is initially treated in the parallel activated sludge biotreater units prior to use as cooling water, then ultimately treated through the facility's NPDES-permitted WWTP.

The locations of the groundwater production wells are shown on **Figure 2**. The daily pumping rates and monthly average withdrawal rates from July 2025 through December 2025 of the groundwater production wells at the WRR (Main and North Properties) are shown in **Table 6**. Water production system pumping rates on a monthly average since July 2025 have ranged from approximately 3,190 gpm to 3,409 gpm.

The site hydraulic gradient created by continued groundwater pumping from the water production wells contributes to a cone of depression, which prevents off-site contaminant migration. This cone of depression is monitored by quarterly groundwater level measurements collected in monitoring wells on the WRR property, along with wells located within the Village. **Figures 2 and 3** show the wells that were gauged quarterly during this reporting period. Groundwater elevations are subsequently depicted on potentiometric surface contour maps. **Figures 4a, 4b, 5a,** and **5b** show the combined Roxana and WRR potentiometric surface contours during this reporting period. These maps are developed on a quarterly basis and submitted to the IEPA on a semi-annual basis.

Samples are collected from operating groundwater production wells on a quarterly basis using a sample spigot with valve on the effluent pipe for each water production well operating at the time of sampling. Samples were collected and analyzed for VOCs via USEPA Method 8260D on August 27th, 2025 for 3Q25 and on December 10th and 11th, 2025 for 4Q25. The laboratory analytical results for the groundwater samples collected during the 3Q25 and 4Q25 events are presented in **Table 8** in fulfillment of Condition IV(E)(2)(c) of the Permit. Data qualifiers were also added by AECOM, as appropriate, and are included on **Table 8** and specified in the data reviews presented in **Appendix F-1** and **F-2**

Information on the construction of the groundwater production wells is provided in **Table 9**. The current status[8] of the above production wells is also presented on **Table 9**.

Shell (as the permittee) continues to work with P66 to monitor the performance of the entire groundwater system and is kept apprised of wellhead and valve repairs, well screen cleanings, pump/motor replacement, etc.

[8] Pumping and operational status is based on information obtained from P66 on a weekly basis. This includes well information (e.g., casing integrity, etc.) and ancillary equipment (e.g., pumps, discharge lines, headers, etc.).

5 Oil Recovery Wells System

Condition IV(A)(4) of the of the Permit requires "…removal of a hydrocarbon layer present on top of the water table beneath portions of the North and Main Properties…." The cone of depression created by the pumping centers causes LNAPL to migrate toward and accumulate at or near the water production wells. As a result, 16 recovery wells (R-39, -40, -42, -64, -67, -69, -73A, -73B, -75, -76, -77, -78, -79, -80, -81, and -89) have been installed adjacent to the correspondingly numbered groundwater production wells. These recovery wells are equipped with submersible pumps to remove LNAPL, where present, from the uppermost aquifer (**Figure 2**). The recovery pumps are total fluid pumps which remove the fluid present, whether it is LNAPL or water.

Water and/or LNAPL are pumped as combined fluids from the recovery wells via Grundfos Redi-Flo4™ Model 5E8 stainless steel electric submersible pumps that operate continuously, pumping the liquid(s) present at the pump intake. According to P66, pumping rates for these pumps range from 8 to 10 gpm. Recovered fluids are transferred through aboveground, heat-traced, and insulated piping into Tank F-67 where the water and LNAPL are gravity separated. The separated water is pumped into the benzene National Emission Standards for Hazardous Air Pollutants (NESHAP) header for treatment in the NPDES permitted WWTP. The recovered oil in F-67 is periodically pumped to one of the distilling units to be processed. Normal maintenance activities such as routine screen cleanings, pump repairs/replacements, electrical repairs/replacements, etc. were conducted on the oil recovery wells as needed. The following table summarizes the approximate annual amount of LNAPL recovered by the oil recovery system in 2005 through the second half of 2025 (as provided by P66); approximation based on height of oil in tank F-67 where one foot of oil equals 322 barrels.

Year	LNAPL Volume (barrels [BBL])
2005	11,464
2006	15,644
2007	16,577
2008	5,922
2009	2,239
2010	0
2011	0
2012	2,242
2013	3,923
2014	3,656
2015	6,818
2016	8,089
2017	1,230
2018	3,272
2019	1,771
2020	1,288
2021	0
2022	725
2023	1,160
2024	1,900
2025	827

In addition to the oil recovery system, LNAPL is manually removed during routine groundwater gauging events at monitoring wells where LNAPL was measured in sufficient quantities (typically greater than 0.10 feet thick) [9]. Field crews use dedicated or disposable bailers to manually remove LNAPL from these groundwater monitoring wells.

LNAPL thickness greater than 0.10 feet was observed in eight groundwater monitoring wells, P-55R, P-61, P-62, P-64, P-68, P-70, S-1, and T-24 during 2H25. The volume of LNAPL manually removed during 2H25 was 1.5 gallons. The manually recovered LNAPL was placed in a metal drum to be recycled at the refinery. **Table 7** lists LNAPL removal volumes by manual methods and by WRR oil recovery wells.

The measurable thickness of LNAPL present in monitoring wells during quarterly gauging events is presented in **Table 1a**. **Figures 6** and **7** illustrate the measured LNAPL thickness observed in monitoring wells during the 3Q25 and 4Q25 comprehensive gauging events, respectively. Groundwater levels within the cone of depression ranged from elevations of 398.3 to 404.0 feet (North American Vertical Datum [NAVD] 88) during the reporting period (see **Figures 4a**, **4b**, **5a**, and **5b**). The tops of the oil recovery well screens are at elevations of approximately 402 to 407 feet (NAVD 88). This demonstrates that the observed LNAPL was within the influence of the cone of depression and the oil recovery system during 3Q25 and 4Q25.

As of the December 24, 2025 P66 skimmer well status report, 14 of the 16 oil recovery wells were operating[10].

Shell (as the permittee) continues to work with P66 to monitor performance of the entire oil recovery system and is kept apprised of wellhead and piping repairs, electrical issues, pump/motor replacement, etc.

[9] LNAPL > 0.10 feet is a project specific criterion for removal, based on practicality with the removal technique.
[10] Pumping and operational status is based on information obtained from P66 on a weekly basis. This includes well information (e.g., casing integrity, etc.) and ancillary equipment (e.g., pumps, discharge lines, headers, etc.).

6 CAP Effectiveness Evaluation

Effectiveness of the CAP at the facility is evaluated on an annual basis in fulfillment of Condition IV(I)(14) of the Permit. Per Conditions IV(I)(14)(b) and (14)(c) of the Permit, an evaluation of "the effectiveness of the hydraulic control and contaminant removal…" and "discussion of any change in quality of groundwater beneath the facility which has resulted from the corrective action" will be addressed, in addition to statistical evaluations as required by Subsection IV(H) and Condition IV(I)(6). This will be included in the next Annual CAP Effectiveness report due August 1, 2026, submitted in combination with the 1H26 WRR and Roxana Groundwater Monitoring reports.

7 Summary and Conclusions

- Groundwater levels rose approximately 0.4 ft in the central and eastern portions of the refinery during 2H25. Groundwater levels rose approximately 1.0 ft in the vicinity of the West Fenceline during 2H25. Groundwater level data indicate groundwater flow from the Village is moving toward groundwater production wells at the WRR.
- Measured LNAPL thickness and the number of locations where it was observed during the 3Q25 and 4Q25 quarterly gauging events was generally comparable to that observed in 1H25.
    - LNAPL has been detected in P-66 since 2Q22, LNAPL was previously last detected in P-66 during 4Q12. WRB/P66 notified IEMA on November 22, 2020, of a release of gasoline from a Buckeye Partners (Wood River Pipeline, LLC) pipeline located to the south of well P-58 along the WRR West Fenceline, and to the north of well P-66 on WRR Main Property. Wells P-58 and P-66 will be gauged and sampled in the absence of LNAPL during the 1Q26 and 2Q26 Roxana Interim Groundwater Monitoring program.

7.1 WRR Semi-Annual CAP Groundwater Monitoring Program

AECOM conducted groundwater monitoring as required by the facility's RCRA Permit for the 2H25 reporting period. The following conclusions are based on the data and information collected as part of this program.

- Overall groundwater capture by the WRR groundwater pumping centers has been maintained throughout the 2H25 reporting period, with a flow velocity of 0.137 ft/day for 3Q25, and 0.127 ft/day for 4Q25.
- Removal of LNAPL by the oil recovery system and manual methods continues, as necessary.
    - During 2H25, the total LNAPL removed from oil recovery and water production wells was approximately 827 barrels (37,734 gallons).
- Groundwater analytical results were generally consistent with the results of prior sampling events.
- Many groundwater monitoring wells in the current WRR program are located along the facility perimeter and have historically been non-detect or below screening values. Wells with a history of benzene detections continue to show overall decreasing trends in benzene concentrations.
    - The revised 2025 GQSs for Class I: Potable Resource Groundwater Part 620 have resulted in some metals exceedances that have not previously exceeded screening criteria, primarily cobalt, nickel, and vanadium.
- The current GMZ present at the facility was established in August 2025. The off-site portion of the GMZ is currently conditionally approved. As specified in 35 Ill. Adm. Code Part 620.450(a)(4)(B), and required by Condition IV(E)(2)(e)(i) of the Permit, a review of the on-going adequacy of the controls and continued management of the GMZ at the site will occur no less than every five years after the establishment of the GMZ. The next re-evaluation report for the GMZ present at the facility will occur in 2030.

Quarterly gauging and semi-annual sampling and reporting will continue as required by the Permit.

7.2 Roxana Quarterly Interim Groundwater Monitoring Program

AECOM conducted the Interim Groundwater Monitoring Program for 3Q25 and 4Q25, and the following conclusions are based on the data and information collected as part of this program.

- The analytical results from 3Q25 and 4Q25 are generally consistent with the results from previous sampling event, with the exception of:
    - Benzene and phenol continue to be outside of historical range in MW-25 during 3Q25, as first observed in 1Q25. MW-25 was not sampled in 4Q25. Benzene and phenol results observed in MW-4 during 3Q25 and 4Q25 were outside of the recent and historical range for the monitoring well,

respectively. Groundwater flow direction in the vicinity of the former PWY during 3Q25 and 4Q25 is to the north-northeast, towards the WRR (**Figures 4b and 5b**). This information indicates that groundwater at the former PWY continues to be captured by the existing WRR groundwater production system.

- Benzene concentration plots presented in **Appendix D-1** continue to show stable or decreasing trends.
- GWSDAT charts presented in **Appendix D-2** show statistically significant downward trends displayed for six wells, no wells displayed statistically significant increasing trends, and the remaining one well displayed a trend that is not statistically significant.

Quarterly gauging and quarterly sampling will continue as required by the Interim Groundwater Monitoring Program.

7.3 Limitations

Shell shall have the right to make and retain copies of and use all Work Products provided. However, such use shall be limited to the particular Site and project for which the Work Product is provided. Shell and its agents may release the Work Product to third parties at its sole risk and discretion. This report is based on data, site conditions, and other information that is generally applicable as of the date of this report, and the conclusions and recommendations herein are therefore applicable only to that time frame and to the report in its entirety.

Data used by AECOM in preparing this report have been furnished to AECOM by Shell, Shell's contractors, and P66. AECOM has relied on this information as furnished and is neither responsible for, nor has confirmed the accuracy of this information.

NOTES:

1) Elevations presented in this table are relative to the 1988 NAVD datum.

2) The corrected water level elevations presented in this table were corrected by a specific gravity of 0.80 for the wells in which LNAPL was identified.

3) PID values measured with a 10.6 electron volt (eV) lamp photoionization detector.

4) btoc = Below Top of Casing; ppm = parts per million; NA = Not Applicable; NE = Not Encountered; NM = Not Measured

5) * Indicates that the LNAPL and/or water level is above the top of the screened zone of the well.

6) Table includes comprehensive groundwater monitoring well gauging data for the last 4 quarters from the combined Village of Roxana Interim Groundwater Monitoring Program and the WRB Refining LP Wood River Refinery Program.

7) The screened interval for certain monitoring wells were adjusted based on an evaluation of the results of annual bottom depth gauging conducted in the first quarter of each year.

8) Top of casing and screened interval for the groundwater monitoring wells in the Roxana Interim Groundwater Monitoring Program and the WRR Program were adjusted based on surveying conducted in 4Q24, in accordance with Permit Condition IV.J.9, which requires wells be surveyed every five (5) years.

NOTES:

1) Field parameters were collected using a Hanna 991301 (pH, temperature, and specific conductance) and a Lamotte 2020we (turbidity).

2) Field parameters for shared well locations in the Village of Roxana Interim Groundwater Monitoring Program and the WRB Refining LP Wood River Refinery Program were collected using a YSI ProDSS.

3) Field parameters for Roxana Interim Groundwater Monitoring Program well locations included in the WRR RCRA Part B permit as GMZ boundary wells are included in Table 2b.

4) NM = Not Measured

5) * = Equipment malfunction. Results are suspect.

6) Negative parameter readings for Turbidity and DO are recorded as zero.

NOTES:

1) Field parameters were collected using a YSI ProDSS.

2) NM = Not Measured

3) * = Equipment malfunction. Results are suspect.

4) Negative parameter readings for Turbidity and DO are recorded as zero.

5) [GMZ] = Village of Roxana Interim Groundwater Monitoring Program well locations included in WRR RCRA Part B Permit as GMZ boundary wells.

NOTES:

1 Denotes screening critieria source from 35 I.A.C. 620, Subpart D.

2 Denotes screening critieria source from 35 I.A.C. 742 (TACO), Appendix B, Table E.

3 Denotes screening criteria source from IL EPA Toxicity Assessment Unit (Chemicals not in TACO, Tier 1 Tables).

	Indicates a historical exceedance of screening criteria.
	Indicates a current exceedance of screening criteria.
--	Empty shaded cell without a value indicates previous quarter analyte result was rejected or the analyte was not analyzed.
--	Empty cell without a value indicates current quarter analyte result was rejected or the analyte was not analyzed.

* Groundwater quality standards provided in 35 I.A.C. 620, Subpart D were updated effective March 28, 2025. Analytical results collected before this date are compared against prior screening values applicable at time of sampling. Analytical results collected beginning in 2Q2025 are compared against the updated GQS effective March 28, 2025.

Groundwater monitoring well designated for sampling in the Semiannual WRR Groundwater Sampling Program, P-55R, contained LNAPL; therefore, this well was not sampled.

Analytes that were non-detect across all sampling locations during the four quarter reporting period are not presented on the Analytical table.

Analytical results for Roxana Interim Groundwater Monitoring Program well locations included in the WRR RCRA Part B permit as GMZ boundary wells are included in Table 3b.

LABORATORY QUALIFIERS

J = The analyte was detected below the reporting limit. Result is estimated.

B = Target analyte was identified in the method blank, indicating possible lab contamination.

H = Analyzed or extracted out of holding time criteria.

F1 = Indicates MS and/or MSD recovery is outside acceptance limit.

*+ = Indicates LCS and/or LCSD is outside acceptance limit, high biased.

*- = Indicates LCS and/or LCSD is outside acceptance limit, low biased.

*1 = LCS/LCSD RPD exceeds control limits.

<#.## Indicates the analyte was not detected above the given reporting limit.

AECOM QUALIFIERS

J = The result is estimated.

UJ = Estimated non-detect.

U = Result is non-detect.

NOTES:

1 Denotes screening critieria source from 35 I.A.C. 620, Subpart D.

2 Denotes screening critieria source from 35 I.A.C. 742 (TACO), Appendix B, Table E.

3 Denotes screening criteria source from IL EPA Toxicity Assessment Unit (Chemicals not in TACO, Tier 1 Tables).

GMZ Denotes Village of Roxana Interim Groundwater Monitoring Program well locations included in WRR RCRA Part B Permit as GMZ boundary wells.

* Groundwater quality standards provided in 35 I.A.C. 620, Subpart D were updated effective March 28, 2025. Analytical results collected before this date are compared against prior screening values applicable at time of sampling. Analytical results collected beginning in 2Q2025 are compared against the updated GQS effective March 28, 2025.

Groundwater monitoring wells designated for sampling in the Interim Groundwater Monitoring Program, P-55R, P-66, and P-68, contained LNAPL; therefore, these wells were not sampled.

Well MW-7 was not sampled during the 4Q2024 or 3Q2025 quarterly sampling events due to operation of the FPWY SEE System. MW-25 was not sampled in 4Q2025 due to elevated groundwater temperatures.

Analytes that were non-detect across all sampling locations during the four quarter reporting period are not presented on the Analytical table.

	Indicates a historical exceedance of screening criteria.
	Indicates a current exceedance of screening criteria.
--	Empty shaded cell without a value indicates previous quarter analyte result was rejected or the analyte was not analyzed.
--	Empty cell without a value indicates current quarter analyte result was rejected or the analyte was not analyzed.

LABORATORY QUALIFIERS

J = The analyte was detected below the reporting limit. Result is estimated.

B = Target analyte was identified in the method blank, indicating possible lab contamination.

H = Analyzed or extracted out of holding time criteria.

I = Value is estimated maximum possible concentration.

F1 = Indicates MS/MSD is outside acceptance limit.

*+ = Indicates LCS and/or LCSD is outside acceptance limit, high biased

*- = Indicates LCS and/or LCSD is outside acceptance limit, low biased

*1 = LCS/LCSD RPD is outside contol limit.

<#.## Indicates the analyte was not detected above the given reporting limit.

AECOM QUALIFIERS

J = The result is estimated.

UJ = Estimated non-detect.

U = Result is non-detect.

Skin

Mixture = 2 or more of the folowing analytes:

			Arsenic [1]	Silver [1]	Hazard Index (HI) *
		Acceptable Level (AL)	0.01	0.058	1
Location	**Sample ID**	**Sample Date**	**Analytical Result ([A], [B], [I]) mg/L**		**Result**
No mixtures in 2H25					

Whole Body

Mixture = 2 or more of the folowing analytes:

			1,2-Dichlorobenzene [1]	Anthracene [1]	Fluoranthene [1]	Antimony [1]	Selenium [1]	Hazard Index (HI) *
		Acceptable Level (AL)	0.6	1.2	0.15	0.006	0.02	1
Location	**Sample ID**	**Sample Date**	**Analytical Result ([A], [B], [I]) mg/L**					**Result**
No mixtures in 2H25								

NOTES:

1 Denotes screening critieria source from 35 I.A.C. 620, Subpart D.

2 Denotes screening critieria source from 35 I.A.C. 742 (TACO), Appendix B, Table E.

3 Denotes screening criteria source from IL EPA Toxicity Assessment Unit (Chemicals not in TACO, Tier 1 Tables).

[GMZ] Denotes Village of Roxana Interim Groundwater Monitoring Program well locations included in WRR RCRA Part B Permit as GMZ boundary wells.

* In addition to meeting the individual substance objectives (screening values), a Hazard Index (HI) must be less than or equal to 1 for a mixture of similar-acting substances, where the HI is calculated by: HI = [A]/ALA + [B]/ALB +. . . [I]/ALI

Indicates a current exceedance of screening criteria.

Empty cell without a value indicates current quarter analyte result was non-detect or the analyte was not analyzed.

GMZ Denotes Village of Roxana Interim Groundwater Monitoring Program well locations included in WRR RCRA Part B Permit as GMZ boundary wells.

* In addition to meeting the individual substance objectives (screening values), a Hazard Index (HI) must be less than or equal to 1 for a mixture of similar-acting substances, where the HI is calculated by: HI = [A]/ALA + [B]/ALB +. . . [I]/ALI

Indicates a current exceedance of screening criteria.

Empty cell without a value indicates current quarter analyte result was non-detect or the analyte was not analyzed.

TABLE 5
GROUNDWATER FLOW RATE DETERMINATION

Quarter	Refinery Gradient (ft/ft)			Refinery Velocity (ft/day)
3Q25	16.5 / 5861	=	0.00282	0.137
4Q25	16 / 6121	=	0.00261	0.127

Sample Calculations:

The above results are based on Darcy's Law, which states:

Velocity = V = Hydraulic Conductivity * Gradient / Porosity

where:

K = Hydraulic Conductivity = 6.0x10-3 cm/sec (Part B RCRA Permit)

Porosity* = 0.35

Regional Groundwater Flow Velocity

$$V = \frac{(6.0 \times 10^{-3} \text{ cm/sec})\ (16.5 \text{ ft} / 5861 \text{ ft})\ (1 \text{ ft} / 30.48 \text{ cm})\ (86400 \text{ sec/day})}{0.35}$$

V = 0.137 ft/day

where:

Gradient = 16.5 / 5861 ft/ft = 0.00282

And:

$$V = \frac{(6.0 \times 10^{-3} \text{ cm/sec})\ (16 \text{ ft} / 6121 \text{ ft})\ (1 \text{ ft} / 30.48 \text{ cm})\ (86400 \text{ sec/day})}{0.35}$$

V = 0.127 ft/day

where:

Gradient = 16 / 6121 ft/ft = 0.00261

NOTES:
* The porosity used for these calculations is the average porosity of those measured and presented in Table C-3 of the approved RCRA Post-Closure Permit Application.

NOTES:

Analytes that were non-detect across all sampling locations during the reporting period are not presented on the Analytical table.

LABORATORY QUALIFIERS

J = The analyte was detected below the reporting limit. Result is estimated.

B = Target analyte was identified in the method blank, indicating possible lab contamination.

H = Analyzed or extracted out of holding time criteria.

F1 = Indicates MS and/or MSD recovery is outside acceptance limit.

*+ = Indicates LCS and/or LCSD is outside acceptance limit, high biased.

*- = Indicates LCS and/or LCSD is outside acceptance limit, low biased.

*1 = LCS/LCSD RPD exceeds control limits.

<#.## Indicates the analyte was not detected above the given reporting limit.

AECOM QUALIFIERS

J = The result is estimated.

UJ = Estimated non-detect.

U = Result is non-detect.

NOTES:

1) Elevations presented in this table are relative to the 1988 NAVD datum.

2) Well not included in the Permit.

3) Well with compromised integrity pending Permit Modification Request.

SS = Stainless Steel
SW = Steel, Welded
PC = Porous Concrete

BGS = Below Ground Surface

Roxana Interim Groundwater Monitoring Well Locations

FIG. NO. 3

LEGEND

- MONITORING WELL LOCATION GAUGED
- MONITORING WELL LOCATION NOT USED IN GENERATION OF CONTOURS
- WRR GROUNDWATER PRODUCTION WELL
- GROUNDWATER GRADIENT
- 407 GROUNDWATER SURFACE CONTOUR NAVD 88 (CONTOUR INTERVAL 0.5 FT.)

REFINERY GROUNDWATER GRADIENT a
16.5'
5861'

NOTES:
1. COMPREHENSIVE GROUNDWATER ELEVATIONS WERE MEASURED JULY 1–3, 2025 DURING THE 3rd QUARTER GAUGING EVENT.
2. CONTOUR LINES PRIMARILY GENERATED BY SURFER VERSION 14 MODELING OF GROUNDWATER ELEVATIONS. SOME INTERPRETATION WAS DONE UTILIZING PROFESSIONAL JUDGMENT AND CONTOUR LINES WERE MODIFIED BY HAND.
3. ELEVATIONS ARE RELATIVE TO NAVD 88.
4. ELEVATIONS USED TO GENERATE THE CONTOUR LINES CAN BE FOUND IN TABLE 1.
5. MONITORING WELLS P–47 AND P–51 ON THE RIVERFRONT PROPERTY WERE GAUGED BUT ARE NOT USED TO GENERATE GROUNDWATER CONTOURS.
6. GROUNDWATER MONITORING WELLS LOCATED OUTSIDE THE WRR PROPERTY BOUNDARY ARE IN THE VILLAGE OF ROXANA AND ARE NOT PART OF THE WOOD RIVER REFINERY RCRA PART B PERMIT, EXCEPT FOR MW–1, MW–3, MW–5, MW–6A–D, MW–10, MW–11, MW–14, MW–16, MW–22, MW–26, MW–28, ROST–3–MW, P–52, P–53, AND P–54.

FIG. NO. 9

LEGEND

GROUNDWATER MONITORING WELL WITH ANALYTICAL EXCEEDANCES OF SCREENING CRITERIA

GROUNDWATER MONITORING WELL WITHOUT ANALYTICAL EXCEEDANCES OF SCREENING CRITERIA

GROUNDWATER MONITORING WELL NOT SAMPLED

NOTES:

1. ANALYTICAL RESULTS ARE SCREENED AGAINST CRITERIA OUTLINED IN THE WRR RCRA PART B PERMIT.
2. GROUNDWATER CLASS I SCREENING CRITERIA.

Analyte	Screening Criteria (mg/L)
Benzene	0.005
2-Methylnaphthalene	0.015
Phenol	0.1

3. MULTIPLE RESULTS (E.G., 0.76 / 0.79) INDICATE DUPLICATE SAMPLES OR CONFIRMATION SAMPLES. BOLDED RESULTS INDICATE EXCEEDANCES WHERE A DUPLICATE SAMPLE WAS BELOW SCREENING CRITERIA.
4. WELL P–55R WAS NOT SAMPLED DURING 4Q25 DUE TO THE PRESENCE OF LNAPL.

B = TARGET ANALYTE WAS IDENTIFIED IN THE METHOD BLANK, INDICATING POSSIBLE LAB CONTAMINATION.

J = THE RESULT IS ESTIMATED.

Sample Location	P-60

NOTES:
1. GROUNDWATER BENZENE CONCENTRATIONS FROM THE FOURTH QUARTER 2025 SAMPLING EVENT ARE DEPICTED IN BLUE. VALUES DEPICTED IN ORANGE EXCEED BENZENE SCREENING CRITERION (0.005 mg/L). NS DENOTES "NOT SAMPLED".
2. GROUNDWATER ELEVATIONS SHOWN ON THIS CROSS-SECTION ARE BASED ON GROUNDWATER GAUGING DATA COLLECTED OCTOBER 1-3, 2025.
3. THIS CROSS-SECTION IS PRIMARILY BASED ON THE INTERPRETATION OF LIMITED HISTORICAL SITE INFORMATION AND DEPICTS GENERALIZED STRATIGRAPHY.
4. THE DEPTH AND THE THICKNESS OF INDIVIDUAL STRATA DEPICTED MAY BE ESTIMATED OR BASED ON PROFESSIONAL JUDGEMENT. THEREFORE, WELL SCREENS MAY APPEAR TO BE PARTIALLY WITHIN CLAY LAYERS OR SHALLOW/DEEPER WITHIN A PERMEABLE STRATUM THAN ACTUAL CONDITIONS DUE TO MAP PROJECTIONS.
5. THE SAND STRATA CONSISTS OF LIMITED AREAS OF SEAMS OF INTERBEDDED CLAY AND SILTS WITH OCCASIONAL GRAVEL AND COAL. GRAVEL AND OCCASIONAL SHALE WERE OBSERVED ABOVE THE LIMESTONE AT DEPTH.
6. ANALYTICAL REPORTING LIMITS ARE SHOWN FOR SAMPLES WITH NON-DETECT RESULTS (E.G., <0.0005 mg/L).

MULTIPLE RESULTS (e.g., <0.001 / <0.001) INDICATE DUPLICATE SAMPLES OR CONFIRMATION SAMPLES.

Appendix A – 2 Roxana Regulatory History

Appendix A-1

WRR Agency Correspondence History

The bulleted list below summarizes Permit-related correspondence which has not yet been addressed between AECOM, on behalf of Shell, and the IEPA prior to this semi-annual reporting period (July 2025 through December 2025).

- On October 26, 2015, AECOM, on behalf of Shell, responded to Comment 1(c) and Condition IV(F)(8) of the IEPA July 29, 2015 permit modification response letter. A *Riverfront Property Delineation Investigation Work Plan* was submitted, which proposed investigation activities to delineate the extent of groundwater impact detected at well P-51 on the WRR Riverfront Property (B-43R-M-14) (AECOM, 2015b).
- On April 18, 2016, AECOM, on behalf of Shell, responded to Condition 2 of the IEPA December 21, 2015 groundwater modeling conditions and modifications letter (IEPA, 2015b). *A Light Non-Aqueous Phase Liquid (LNAPL) Recovery System Evaluation Work Plan* was submitted, which proposed evaluation activities for the WRR LNAPL recovery system (B-43R-CA-34 and -43) (AECOM, 2016a).
- On January 18, 2017, IEPA issued comments related to the previously performed groundwater profile delineation investigation and Public Works Yard soil sampling investigation results (IEPA, 2017a). This letter requested a comprehensive soil and groundwater sampling and analysis report be submitted and include a proposal for additional soil and groundwater sampling to further delineate contamination in the northwestern portion of the Main Property and the Public Works Yard. As requested, a letter and *Comprehensive Soil and Groundwater Sampling and Analysis Report* was submitted on April 21, 2017 (B-43R-CA-59, -60, -69) (AECOM, 2017). This submittal presented comprehensive soil and groundwater data in the subject areas, including newer data collected since the originally commented on investigations, and concluded that delineation has been achieved in the subject areas.
- On October 12, 2020, AECOM, on behalf of Shell, requested a Class 1* Permit Modification in response to an IEPA issued letter dated December 20, 2019 (B-43R-M-29) (AECOM, 2020b). The December 20, 2019 letter issued approval and comments related to several Hazardous Waste Management Post-Closure Permit Modifications requests and included a modified Permit. The letter included a condition requesting the installation of a new B-level groundwater monitoring well to be added to the Roxana Interim Groundwater Monitoring Program to intercept potential groundwater contamination observed at P-93B. The October 12th AECOM response indicated the B-level impact observed in P-93B has been delineated to the west and, therefore the installation of a new groundwater monitoring well does not appear to be necessary at this time and as such is not proposed. In the modified permit received on August 20, 2025, the IEPA did not concur with AECOM's response, stating a new well 293B continues to be necessary.
- On November 8, 2023, IEPA issued a Violation Notice (VN L-2023-00370), in response to the triennial site inspection performed in July 2023. The alleged violations included in this violation notice were related to monitoring well labels and construction. A meeting was held between AECOM, Shell, and IEPA on January 4, 2024. A request for extension to submit a response to the Violation Notice was submitted to IEPA on January 15, 2024, and was approved by IEPA in an email dated January 24, 2024. AECOM, on behalf of Shell, submitted a Response to Violation Notice L-2023-00370 on February 16, 2024. IEPA issued a Proposed Compliance Commitment Agreement (CCA), dated March 21, 2024. The Proposed CCA was signed and accepted by Shell; IEPA issued the Executed CCA on April 29, 2024. The Class 1* Permit Modification Request required by the executed CCA was submitted to IEPA on March 28, 2024.

Appendix A-2

Roxana Regulatory History

The Interim Groundwater Monitoring Program (Program) began in the 4th Quarter 2010 (4Q10), and the first report was submitted on January 14, 2011. On March 3, 2011, a conference call was held among representatives of Equilon Enterprises LLC d/b/a Shell Oil Products US (SOPUS), Illinois Environmental Protection Agency (IEPA), and URS Corporation (URS) to discuss the Program and IEPA's general comments on the 4Q10 report. Subsequent report modifications were incorporated during 1st Quarter 2011 (1Q11) and 2nd Quarter 2011 (2Q11). Additional items and comments regarding the Program were presented by IEPA on June 16, 2011 (CA-1, -3, -5, -6, -7, -8, -10, and -11) (IEPA, 2011a) and August 31, 2011 (CA-21) (IEPA, 2011b) letters. These items and comments were addressed in the 3rd Quarter 2011 (3Q11) and 4th Quarter 2011 (4Q11) reports.

In a March 14, 2012, letter (CA-24) from IEPA to SOPUS (IEPA, 2012a), IEPA requested groundwater piezometer ROST-3-PZ and groundwater monitoring well ROST-4-PZ(C) be added to the Program. These monitoring locations were added to the Program in 2nd Quarter 2012 (2Q12).

In a second letter (CA-25) dated March 14, 2012, from IEPA to SOPUS (IEPA, 2012b), IEPA requested that perched groundwater be evaluated at groundwater monitoring piezometers P-60-12S, P-60-13S, ROST-5-PZ, ROST-7-PZ, ROST-10-PZ, and ROST-21-PZ. These perched groundwater monitoring piezometers were incorporated into the Program beginning in 2Q12. In a letter dated August 16, 2013 (URS, 2013a), URS, on behalf of SOPUS, informed the IEPA of the determination that the perched groundwater monitoring piezometers are either dry, based on the criteria given in IEPA's March 14, 2012 letter, or not able to be sampled per the groundwater sampling standard operating procedure (SOP) due to slow recharge. The IEPA, during phone conversations, requested that certain piezometers remain in the Program. In response to this request, a letter dated January 14, 2014, was submitted to IEPA (URS, 2014a), stating that these piezometers will remain in the Program. A separate letter dated January 14, 2014 was submitted to the IEPA (URS, 2014b), requesting removal of ROST-5-PZ and ROST-10-PZ based on Condition 8(a) of the March 14, 2012 IEPA letter (CA-25), which states that ROST-5-PZ and ROST-10-PZ must remain within the Program for one year before the determination is made that these wells are dry. IEPA responded to the August 16, 2013 and both January 14, 2014 letters in a correspondence (CA-67) dated July 27, 2016 (IEPA, 2016a). In the July 27, 2016 letter, IEPA approved the request to abandon perched wells P-60-12S, P-60-13S, ROST-5-PZ, ROST-7-PZ, ROST-10-PZ, and ROST-21-PZ and remove them from the Program. Abandonment activities were conducted on September 15, 2016.

In the March 14, 2012 letter (CA-25), IEPA also requested the installation of groundwater monitoring wells in the Village of Roxana (Village) to evaluate potential light non-aqueous phase liquid (LNAPL). These groundwater monitoring wells (MW-16 through MW-22 and MW-24) were installed during 4th Quarter 2012 (4Q12) and incorporated into the Program beginning in 1st Quarter 2013 (1Q13). In a letter (CA-37 and -58) dated May 22, 2015, IEPA provided approval for the April 3, 2013 *Groundwater Monitoring Well and Vapor Monitoring Point Installation Report* (IEPA, 2015a).

On May 31, 2012, IEPA verbally requested the following be incorporated into the 2Q12 report:

- The ROST-4 series of groundwater monitoring wells and piezometers in the groundwater elevation contour maps;
- A groundwater contour map focusing on the West Fenceline area in the Village; and
- A Roxana site and WRR LNAPL map.

In an April 8, 2013 letter (CA-38 and -41) from IEPA to SOPUS (IEPA, 2013a), IEPA requested a discussion of irregular potentiometric contours in the ROST-4-PZ area and P-60 area wells. This response was submitted to the

IEPA in a letter dated July 29, 2013 (URS, 2013b). In a letter dated July 27, 2016 (CA-63) (IEPA, 2016b), IEPA approved the July 29, 2013 letter with the following conditions and modifications:

- Address the potentiometric high in the northern portion of the Study Area, by submitting a proposal within 120 days, which at a minimum will include:
    - A proposal to install nested wells that will track the area of the low-permeability zone.
    - The nested wells must be adequate to verify groundwater quality, flow direction, and hydraulic gradient, and these wells should show that pumping overcomes potential radial flow.
- A text section must be added to the Program quarterly reports to provide a detailed discussion of the potentiometric surface in this area.

AECOM responded to the July 27, 2016 letter in a letter dated October 14, 2016 (AECOM, 2016b). On March 11, 2024, a replacement RCRA form with wet signatures was submitted to IEPA (AECOM, 2024d). In a letter (M-32, -44, -53, and CA-93) dated August 20, 2025 (IEPA, 2025b), IEPA approved with conditions the July 27, 2016 letter, with additional actions necessary to finalize approval of the off-site portion of the GMZ.

In a July 18, 2013 letter (CA-33, -45, and -48) from IEPA to SOPUS (IEPA, 2013b), IEPA approved a change in gauging frequencies for wells in the Program. The list of wells to be gauged on a weekly basis was reduced and a new list of wells to be gauged on a monthly basis was initiated. This letter also requested that any free-phase hydrocarbon (FPH) and photoionization detector (PID) data collected at the well heads be included in the quarterly groundwater monitoring reports. The modified gauging frequencies for wells began the week of July 22, 2013. The list of wells gauged during each routine event is reviewed on a regular basis and modified to meet the conditions requested by the IEPA. The additional reporting requirements were first incorporated in the 3rd Quarter 2013 (3Q13) report.

In a June 13, 2014 letter (M-9 through -13, and -15) from IEPA to SOPUS (IEPA, 2014a), IEPA requested the installation of four groundwater monitoring wells in the Village to monitor the extent and effectiveness of corrective action efforts within the residential area. The access agreement with the Village was signed on August 12, 2014, and well installation began in September 2014 and was completed in October 2014. These groundwater monitoring wells (MW-25 through MW-28) were added to the Program in 4th Quarter 2014 (4Q14).

In an October 9, 2014 letter (CA-47) from IEPA to SOPUS (IEPA, 2014b), IEPA approved the installation plan for a groundwater monitoring well located on BP property with certain conditions and modifications. Well MW-23 was installed during January 2015 and was added to the Program in 1st Quarter 2015 (1Q15).

In a letter (CA-70) dated November 25, 2014 (IEPA, 2014c), IEPA approved the proposed plan for groundwater corrective action (submitted to IEPA on November 14, 2013 (URS, 2013c)), with the following conditions:

- The 1Q15 groundwater samples obtained from: (1) the current monitoring well network; (2) the four new wells required by the modified Resource Conservation and Recovery Act (RCRA) Hazardous Waste Management Post-Closure Permit (Permit) at the WRR, issued September 23, 2010 (modified December 20, 2019) (IEPA, 2010b); and (3) the new well required by the October 9, 2014, letter must be used in a demonstration to verify the extent of groundwater contamination has been delineated; or
- If SOPUS cannot define the extent of contamination, a proposal for additional investigation must be submitted.

On December 5, 2014, a letter was submitted to IEPA by URS (URS, 2014c), on behalf of SOPUS, requesting a reduction in the routine gauging performed as part of the Program. In a letter (CA-83) dated August 2, 2017 (IEPA, 2017b), IEPA approved the December 5, 2014 request to reduce the frequency of routine gauging from weekly/monthly to quarterly with the following condition:

- Groundwater monitoring wells ROST-4-PZ(E) and ROST-4-PZ(G) must be added to the list of wells sampled quarterly for groundwater quality. These monitoring wells were added to the sampling portion of the Program in 4th Quarter 2017.

In a meeting on April 5, 2018, IEPA verbally requested that benzene concentration trend plots for selected monitoring wells be incorporated into Roxana Program quarterly reports. This information is discussed in **Section 3** of the Program quarterly report. These trend plots were first included with the 2nd Quarter 2018 (2Q18) monitoring report.

On October 25, 2019, IEPA approved via email the Roxana Groundwater Ordinance 867 for use as an institutional control in accordance with Title 35 of the Illinois Administrative Code Part 742 (35 IAC 742) to restrict access to groundwater (IEPA, 2019b).

SOPUS's current Resource Conservation and Recovery Act (RCRA) Permit at the WRR was issued by IEPA on September 23, 2010, and expired October 28, 2020 (IEPA, 2010b). A Permit renewal application was submitted to IEPA on April 29, 2020, in accordance with Condition VI(B)(6) of the Permit and a letter from IEPA dated November 6, 2019. A timely filing of the renewal application was made and, therefore, the conditions of the Permit are stayed. On June 30, 2020, IEPA issued a Notice of Incompleteness letter after conducting a completeness review of the Permit renewal application (IEPA, 2020a); AECOM submitted the Permit Application Completeness Response to IEPA on September 4, 2020 (AECOM, 2020b). IEPA issued a letter on October 30, 2020, indicating they have determined the application to be complete (IEPA, 2020b).

On October 12, 2020, AECOM, on behalf of SOPUS, requested a Class 1* Permit Modification (AECOM, 2020c) in response to an IEPA issued letter dated December 20, 2019 (M-21, -26 through -30, -35, -36, and -38) (IEPA, 2019c). The December 20, 2019 letter issued approval and comments related to several Hazardous Waste Management Post-Closure Permit (Permit) Modifications requests and included a modified Permit. The letter included a condition requesting the installation of a new B-level groundwater monitoring well to be added to the Roxana Interim Groundwater Monitoring Program to intercept potential groundwater contamination observed at P-93B. The October 12th AECOM response indicated the B-level impact observed in P-93B has been delineated to the west and, therefore, the installation of a new groundwater monitoring well does not appear to be necessary at this time and as such is not proposed. In the letter dated August 20, 2025 (M-32, -44, -53, and CA-93) (IEPA, 2025b), IEPA determined that new well 293B continues to be necessary, supported by the conditions of a January 26, 2024 letter (CA-113, -114, -115) (IEPA, 2024a) which requires delineation to the southwest, south, and southeast of the SEE system area.

On August 22, 2022, IEPA approved with conditions the *Public Works Yard (PWY) Steam Enhanced Extraction (SEE) Workplan* (CA-107) (IEPA, 2022b). The PWY SEE Workplan was submitted to IEPA on January 31, 2022 (AECOM, 2022a) and provided the system design as well as the plan and schedule for construction, operation, post-shutdown monitoring, and decommissioning for the proposed SEE system at the Roxana old PWY. In a September 21, 2022 meeting attended by AECOM, Shell, McMillan-McGee, and IEPA, comments pertaining to the IEPA's August 22, 2022 letter were discussed, including additional PWY sampling.

- Condition 2 of IEPA's August 22, 2022 letter (CA-107) stated that a Roxana Public Works Yard (PWY) Steam Enhanced Extraction (SEE) - Final Design Report and Construction Work Plan (FDRCWP) was due within 90 days of the date of the letter (i.e. November 20, 2022). On October 14, 2022, AECOM, on behalf of Shell, requested the due date for the FDRCWP be extended to December 20, 2022 to allow for adequate preparation.

On December 16, 2022, AECOM, on behalf of Shell, submitted the *Roxana Public Works Yard (PWY) Steam Enhanced Extraction (SEE) - Final Design Report and Construction Work Plan (FDRCWP)* (AECOM, 2022e) to IEPA in fulfillment of Phase II of the Corrective Measures Program (CMP). The Roxana PWY SEE FDRCWP responded to conditions in IEPA's August 22, 2022 letter (CA-107) and describes the additional sampling discussed in the September 21, 2022 meeting that will be collected prior to, and during, the construction of the SEE system. On January 30, 2023, AECOM, on behalf of Shell, submitted *Additional Information to Log No. B-43R-CA-109* (*PWY SEE – Response to 8/22/22 Letter & FDRCWP*) (AECOM, 2023a) in response to questions and specific requests by IEPA during a virtual discussion on January 5, 2023, to help facilitate IEPA review and respond to the Roxana PWY SEE FDRCWP. On May 5, 2023, IEPA approved with conditions the Roxana PWY SEE FDRCWP for in-situ thermal remediation (ISTR), specifically Steam Enhanced Extraction (SEE), to reduce and remediate benzene as well as other VOCs present in the treatment target zone of SEE at the PWY (CA-109) (IEPA, 2023b). On August 3, 2023, AECOM, on behalf of Shell, submitted a response (AECOM, 2023f) to the IEPA letter dated May 5, 2023. On

January 26, 2024, IEPA approved with conditions the response to May 5, 2023 IEPA Letter as well as two Additional Information submittals related to the Roxana PWY SEE FDRCWP (CA-113, -114, and -115) (IEPA, 2024a). On February 23, 2024, AECOM, on behalf of Shell, submitted a response to the IEPA letter dated January 26, 2024 (AECOM, 2024b). On March 4, 2024, AECOM, on behalf of Shell, submitted the *Former Public Works Yard Steam Enhanced Extraction – Pre-SEE Additional Sampling Results* in response to conditions from the IEPA May 5, 2023, letter (AECOM, 2024c). On March 14, 2024, a virtual meeting was held between IEPA, Shell, and AECOM to provide an update on the SEE prior to startup and facilitate an open forum for any questions. On April 22, 2024, IEPA approved with conditions the *Response to January 26, 2024 IEPA letter* dated February 23, 2024, as well as another submittal *Former Public Works Yard Steam Enhanced Extraction – Pre-SEE Additional Sampling Results,* dated March 4, 2024 (CA-116 and -117) (IEPA, 2024d).

On January 30, 2023, AECOM, on behalf of Shell, also submitted the Application for Water Pollution Control Permit to IEPA for the PWY SEE system (AECOM, 2023b). This was submitted after receipt of IEPA's July 11, 2022 Contained-In concurrence letter (PS22-007) (IEPA, 2022a). On March 2, 2022, AECOM, on behalf of Shell, submitted the Contained-In Determination Request Form (AECOM, 2022c) to IEPA that was inadvertently left out of the Contained-In Determination submitted February 21, 2022 (AECOM, 2022b). The February 21, 2022 Contained-In Determination stated groundwater generated during operation of the proposed SEE system is expected to no longer contain hazardous waste after treatment. On April 4, 2023, IEPA approved with conditions the FPWY Construction and Operation of Steam Enhanced Extraction Pretreatment System permit (IEPA, 2023a). The operational portion of this permit expires February 28, 2028.

On February 23, 2023, AECOM, on behalf of Shell, submitted the Former Public Works Yard (FPWY) Class V Injection Well Inventory Form for the PWY SEE system (AECOM, 2023c).

On August 1, 2023, IEPA responded to the AECOM letter dated July 6, 2023, *Notice of Water Production Well W-85 Damage* (AECOM, 2023d), requesting the frequency for groundwater monitoring, well gauging, and reporting increased to a monthly schedule until a replacement for W-85 is installed and "capable of operating and contributing to the required combined minimum pumping rate of 3,000 gallons per minute" (PS23-032) (IEPA, 2023c). On August 10, 2023, a virtual meeting was held between IEPA, Shell, and AECOM to clarify and discuss the conditions of the IEPA August 1, 2023, letter. On August 11, 2023, AECOM, on behalf of Shell, submitted a Class 1* Permit Modification (AECOM, 2023g) in accordance with Condition IV(K)(2) of Shell's RCRA Post-Closure Permit, issued September 23, 2010, and most recently modified October 31, 2022. The Class 1* Permit Modification included further discussion of well W-85 notification timeline, W-85 removal, and proposal for new water production well W-92.

On November 8, 2023, IEPA issued a Violation Notice (VN L-2023-00369), in response to the triennial site inspection performed in July 2023 (IEPA, 2023d). The alleged violations included in this violation notice were related to monitoring well labels and construction. A meeting was held between AECOM, Shell, and IEPA on January 4, 2024. A request for extension to submit a response to the Violation Notice was submitted to IEPA on January 15, 2024, and was approved by IEPA in an email dated January 24, 2024. AECOM, on behalf of Shell, submitted a *Response to Violation Notice L-2023-00370* on February 16, 2024 (AECOM, 2024a). IEPA issued a Proposed Compliance Commitment Agreement, which was dated March 21, 2024, and received by AECOM on March 25, 2024 (IEPA, 2024b). The Proposed CCA was signed and accepted by Shell; IEPA issued the Executed CCA on April 29, 2024. The Class 1* Permit Modification Request required by the executed CCA was submitted to IEPA on March 28, 2024 (AECOM, 2024e).

On April 9, 2024, IEPA approved the July 6, 2023 Request to Change Due Dates of Roxana Interim Groundwater Monitoring Reports (AECOM, 2023e), extending due dates by approximately two weeks (CA-112) (IEPA, 2024c).

On December 13, 2024, AECOM, on behalf of Shell, submitted the *Former Public Works Yard Steam Enhanced Extraction System 2024-2025 Winter Operations Plan* letter (AECOM, 2024f). On February 18, 2025, IEPA approved with conditions this Winter Operations Plan (CA-120) (IEPA, 2025a).

LOW FLOW GROUNDWATER SAMPLING DATA SHEET

PROJECT NAME: Roxana 4Q25 GW PROJECT NUMBER: 60738191 - 3.4.1/2/3 FIELD PERSONNEL: S. McLean, T. Jenkins

DATE: 10/7/25 WEATHER: 72° Cloudy

MONITORING WELL ID: MW-12 SAMPLE ID: MW12-ROX-100725 (-MS/MSD)

INITIAL DATA

Well Diameter): 2 in	IF SCREEN ≤10 FT & WATER ABOVE TOP OF SCREEN – PUMP INTAKE AT MIDPOINT OF SCREEN: ft btoc	Volume of Flow Through Cell : 320* mL
Total Well Depth (btoc): 51.74 ft		Minimum Purge Volume = (3 x Flow Cell Volume): 960 mL
Depth to Water (btoc): 41.68 ft	IF SCREEN ≤10 FT & WATER WITHIN SCREEN – PUMP INTAKE AT MIDPOINT OF WATER COLUMN HEIGHT: 46.71 ft btoc	Ambient PID/FID Reading: 0.0 ppm
Depth to LNAPL/DNAPL (btoc): NE ft		
Depth to Top of Screen (btoc): 41.41 ft	IF SCREEN & WATER COLUMN >10 FT – PUMP INTAKE AT 5 FT BELOW TOP OF SCREEN OR TOP OF WATER (WHIEVER IS DEEPER): ft btoc	Wellbore PID/FID Reading: 0.0 ppm
Screen Length: 10 ft		
Water Column Height (not including NAPL): 10.06 ft	IF SCREEN >10 FT & WATER COLUMN HEIGHT <10 FT – PUMP INTAKE AT MIDPOINT OF WATER COLUMN HEIGHT: ft btoc	
	IF SCREEN AND/OR WATER COLUMN HEIGHT <4 FT – PUMP INTAKE AT 1 FT BELOW TOP OF SCREEN OR WATER (WHICHEVER IS DEEPER): ft btoc	

PURGE DATA

Pump Type: Stainless Steel Submersible Pump

STABLE: (over 4 readings) | Monitor Temp. | +/-0.2 mg/L or +/-10% | +/-5% or +/-2 uS/cm | +/-0.2 mg/L | +/-20 mV | Monitor Turb Readings (<50)

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.	X			The MS/MSD was performed on T13-WRR-100625-EB.
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method	X			
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the			X	

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.				
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-283672-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/7/2025 9:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.5°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: (400-283701-G-5-A), (400-283701-G-5-B MS) and (400-283701-G-5-C MSD). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: AECOM
Job ID: 400-283672-1
Project/Site: REFINERY 2H Semiannual

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.			X	
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method	X			
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the			X	

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.				
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-283767-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/8/2025 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.4°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM

Note Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC

Laboratory Report Reviewed: 400-283852-1

Site Name: Shell Wood River Refinery

Prepared By and Date: Sachin S 12/04/2025

Event Reviewed: 2H Semiannual 2025 Data Review

Reviewed By and Date: Delaine Austin 12/21/2025

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.		X		
The laboratory case narrative indicated a discrepancy between the container labels and COC identifications for P85B-WRR-100825 and P85D-WRR-100825. The container labels noted P87B-WRR-100825 and P87D-WRR-100825. Samples were logged in per the container labels and a revised COC was sent to the laboratory. No qualification of data was required.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	
Matrix Spike	MS recoveries met acceptance criteria.			X	
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		

Method 8270E (SVOC)
The continuous calibration verification (CCV) for pyridine was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
P17-WRR-100825	SVOCs	Phenol	**UJ**
P87B-WRR-100825	SVOCs	Phenol	**UJ**

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
P87D-WRR-100825	SVOCs	Phenol			**UJ**
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-283852-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/9/2025 9:35 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

Receipt Exceptions
The container label for the following sample(s) did not match the information listed on the Chain-of-Custody (COC):

The container labels list P87B-WRR-100825, while the COC lists P85B-WRR-100825.

The container labels list P87D-WRR-100825 while the COC lists P85D-WRR-100825.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 400-726502.

Method 8270E_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 400-726502.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727529 recovered outside acceptance criteria, low biased, for Phenol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Project/Site: REFINERY 2H Semiannual

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Morning Leah,

My apologies, the COC should also say P87. Let me know if you need me to send over a corrected COC.

Thank you,
Mary Massa (D'Angelo) PG (MO)

Subject: ***Please Note***400-283852 REFINERY 2H Semiannual Sample Confirmation files from Eurofins Southeast

Hello,

For this set of samples, the COC indicates P85 however the labels had P87. Which ID is correct?

Attached, please find the Sample Confirmation files for job 400-283852; REFINERY 2H Semiannual

The samples were received on 10/9/2025 09:35 AM

Please review the attachments for accuracy and notify your Project Manager of any discrepancies as quickly as possible.

Any discrepancies not communicated in a timely fashion could result in missed holding times, TAT delays and may potentially incur additional charges.

Please feel free to contact me if you have any questions.

Thank you.

Leah Klingensmith

Laboratory Report Reviewed: 400-283995-1

Site Name: Shell Wood River Refinery

Prepared By and Date: Sachin S 12/04/2025

Event Reviewed: 2H Semiannual 2025 Data Review

Reviewed By and Date: Delaine Austin 12/21/2025

Stage 2A Validation

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
Holding Times	Analyses were performed within holding time.		X		

Method 8260D

At the time of analysis of VOCs by method 8260D, sample P87C-WRR-101025 had a pH >2, outside the method required preservation criteria. The sample was analyzed outside the 7-day holding time criteria for unpreserved samples. Therefore, the sample results were qualified as estimated (J) for detects and (UJ) for non-detects.

Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.		X		

Method 8260D

Field ID	Field Duplicate ID	Parameter	Analyte	RPD	Qualification
P60-WRR-101025	P60-WRR-101025-DUP	VOCs	m & p-Xylene	**32**	J/J
			Ethylbenzene	**31**	J/J

Matrix Spike	MS recoveries met acceptance criteria.	X			
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.		X		

Method 8260D (SVOCs)

LCS/LCSD ID	Parameter	Analyte	LCS/LCSD Recovery	RPD	LCS/LCSD/RPD Criteria
LCS 500-838758/20/ LCSD 500-838758/21	VOC	Ethylbenzene	110/**125**	12	70-123/20

Analytical data reported as non-detect and associated with LCS/LCSD recovery above evaluation criteria, indicating a possible high bias, did not require qualification.

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			Analytes were detected in samples that were diluted.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-283995-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/11/2025 9:20 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.6°C.

GC/MS VOA
Method 8260D: The following sample(s) was collected in a properly preserved vial; however, the pH was outside the required criteria when verified by the laboratory. The sample was analyzed outside the 7-day holding time specified for unpreserved samples but within the 14-day holding time specified for preserved samples: P87C-WRR-101025 (400-283995-2).

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 500-838758 recovered outside control limits for the following analytes: Ethylbenzene. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) analyzed in 500-838758 was above the method criteria for the following analyte(s): Ethylbenzene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: P60-WRR-101025 (400-283995-5) and P60-WRR-101025-DUP (400-283995-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: The following samples were diluted to bring the concentration of target analytes within the calibration range: P60-WRR-101025 (400-283995-5) and P60-WRR-101025-DUP (400-283995-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM
Project/Site: REFINERY 2H Semiannual

Job ID: 400-283995-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET CHI
8270E	Semivolatile Organic Compounds (GC-MS/MS)	SW846	EET PEN
6010D	Metals (ICP)	SW846	EET CHI
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	EET CHI
3511	Microextraction of Organic Compounds	SW846	EET PEN
5030B	Purge and Trap	SW846	EET CHI

Event Reviewed: 2H Semiannual 2025 Data Review

Reviewed By and Date: Delaine Austin 12/21/2025

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.	X			
The associated MS/MSD recoveries were missing from the summary forms, associated with parent sample P81C-WRR-101425. However, the recoveries were found in the raw data section of the lab reports. No qualification was required due to this anomaly.					
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			The laboratory report was revised on November 3, 2025, to correct sample identification for P014-WRR-101425.
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		

Method 8270E (SVOC)

The continuous calibration verification (CCV) for phenol was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
P81C-WRR-101425	SVOC	Phenol	**UJ**

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-284155-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Revision
Report revised to correct sample ID; P014-WRR-101425 (400-284155-7). Supersedes report dated 10-27-2025.

Receipt
The samples were received on 10/15/2025 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727667 recovered outside acceptance criteria, low biased, for Phenol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: AECOM
Job ID: 400-284155-1
Project/Site: REFINERY 2H Semiannual

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM
Project/Site: REFINERY 2H Semiannual

Job ID: 400-284155-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET CHI
8270E	Semivolatile Organic Compounds (GC-MS/MS)	SW846	EET PEN
6010D	Metals (ICP)	SW846	EET CHI
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	EET CHI
3511	Microextraction of Organic Compounds	SW846	EET PEN
5030B	Purge and Trap	SW846	EET CHI

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.	X			
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method	X			
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the			X	

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.				
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-284248-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/16/2025 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 400-727296.

Method 8270E_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 400-727296.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Cobalt, Dissolved	**5.0**		5.0	0.78	ug/L		10/21/25 08:44	10/22/25 18:42	1
Nickel, Dissolved	ND		10	4.8	ug/L		10/21/25 08:44	10/22/25 18:42	1
Lead, Dissolved	ND		5.0	2.7	ug/L		10/21/25 08:44	10/22/25 18:42	1
Vanadium, Dissolved	ND		5.0	0.92	ug/L		10/21/25 08:44	10/22/25 18:42	1

Definitions/Glossary

Client: AECOM
Job ID: 400-284248-1
Project/Site: REFINERY 2H Semiannual

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM
Project/Site: REFINERY 2H Semiannual

Job ID: 400-284248-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET PEN
8270E	Semivolatile Organic Compounds (GC-MS/MS)	SW846	EET PEN
6010D	Metals (ICP)	SW846	EET CHI
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	EET CHI
3511	Microextraction of Organic Compounds	SW846	EET PEN
5030C	Purge and Trap	SW846	EET PEN

Stage 2A Validation

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.		X		

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
P88A-WRR-101625	SVOCs	Phenol-d5	**1**	10-150
P88A-WRR-101625	SVOCs	2-Fluorophenol	**5**	10-150

Professional judgement was used to qualify as estimated, however, not reject the SVOC results associated with sample P88A-WRR-101625 due to poor surrogate recoveries. The associated results in sample P88A-WRR-101625 were qualified as estimated (UJ) for non-detects.

Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.	X			
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	70-130% and the medium/high acceptance range of 90-110% as applicable to the method				
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-284314-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/17/2025 9:29 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 1.2°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: Surrogate recovery for the following sample was outside control limits: P88A-WRR-101625 (400-284314-4). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Barium, Dissolved	10		10	1.2	ug/L	1		6010D	Dissolved
Cobalt, Dissolved	1.4	J	5.0	0.78	ug/L	1		6010D	Dissolved
Lead, Dissolved	2.8	J	5.0	2.7	ug/L	1		6010D	Dissolved
Vanadium, Dissolved	4.2	J	5.0	0.92	ug/L	1		6010D	Dissolved

Client Sample ID: P86A-WRR-101625 — Lab Sample ID: 400-284314-9

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Barium, Dissolved	140		10	1.2	ug/L	1		6010D	Dissolved

Client Sample ID: P8U-WRR-101625 — Lab Sample ID: 400-284314-10

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
2-Methylnaphthalene	36		0.20	0.076	ug/L	1		8270E	Total/NA
Barium, Dissolved	95		10	1.2	ug/L	1		6010D	Dissolved
Lead, Dissolved	2.9	J	5.0	2.7	ug/L	1		6010D	Dissolved

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: AECOM
Job ID: 400-284314-1
Project/Site: REFINERY 2H Semiannual

Client Sample ID: P8U-WRR-101625-DUP
Lab Sample ID: 400-284314-11

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
2-Methylnaphthalene	34		0.20	0.076	ug/L	1		8270E	Total/NA
Barium, Dissolved	95		10	1.2	ug/L	1		6010D	Dissolved
Lead, Dissolved	2.9	J	5.0	2.7	ug/L	1		6010D	Dissolved

This Detection Summary does not include radiochemical test results.

Client Sample ID: TB-WRR-101625
Lab Sample ID: 400-284314-1
Date Collected: 10/16/25 00:00
Matrix: Water
Date Received: 10/17/25 09:29

Method: SW846 8260D - Volatile Organic Compounds by GC/MS

Definitions/Glossary

Client: AECOM
Job ID: 400-284314-1
Project/Site: REFINERY 2H Semiannual

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM

Stage 2A Validation

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.		X		

Method 8270E

Phenol in sample T12-WRR-101725 was re-extracted 3 days outside of extraction time criteria (7 days) and then re-analyzed due to surrogate exceedances in the original preparation; both sets of data were reported. Results were comparable, therefore, based on professional judgement phenol in sample T12-WRR-101725 was reported from the primary run.

Surrogate	Surrogate recoveries met acceptance criteria.		X		

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
T12-WRR-101725	SVOCs	2-Fluorophenol	196	10-150
T12-WRR-101725	SVOCs	Phenol-d5	179	10-150
T12-WRR-101725	SVOCs	2,4,6-Tribromophenol	202	10-150

Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
T12-ROX-101725	SVOCs	Phenol	J

Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.	X			The MS/MSD was performed using sample P56-WRR-101725-EB.
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.		X		Analytes were detected in samples that were diluted.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	Organics The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method				
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method				

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-284369-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/18/2025 9:42 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 0.6°C.

GC/MS VOA
Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: T12-WRR-101725 (400-284369-5). Elevated reporting limits (RLs) are provided.

Method 8260D: The following samples were diluted due to the abundance of non-target analytes: P56-WRR-101725 (400-284369-3) and P59-WRR-101725 (400-284369-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 400-727411.

Method 8270E_QQQ: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 400-727411.

Method 8270E_QQQ: Surrogate recovery for the following sample was outside control limits: T12-WRR-101725 (400-284369-5). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM
Project/Site: REFINERY 2H Semiannual

Job ID: 400-284369-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET PEN
8270E	Semivolatile Organic Compounds (GC-MS/MS)	SW846	EET PEN
6010D	Metals (ICP)	SW846	EET CHI
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	EET CHI
3511	Microextraction of Organic Compounds	SW846	EET PEN
5030C	Purge and Trap	SW846	EET PEN

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6°C, 0.0°C IR-11
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Laboratory Report Reviewed: 400-284373-1

Site Name: Shell Wood River Refinery

Prepared By and Date: Sachin S 12/10/2025

Event Reviewed: 2H Semiannual 2025 Data Review

Reviewed By and Date: Delaine Austin 12/21/2025

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	
Matrix Spike	MS recoveries met acceptance criteria.			X	
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		

Method 8270E (SVOC)

The continuous calibration verification (CCV) for phenol was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
P84C-WRR-101725	SVOCs	Phenol	**UJ**
P84B-WRR-101725	SVOCs	Phenol	**UJ**
P84A-WRR-101725	SVOCs	Phenol	**UJ**

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
P84D-WRR-101725	SVOCs	Phenol			**UJ**
P43-WRR-101725	SVOCs	Phenol			**UJ**
P7U-WRR-101725	SVOCs	Phenol			**UJ**
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-284373-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/18/2025 9:42 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 0.6°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-727805 recovered outside acceptance criteria, low biased, for Phenol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: AECOM
Job ID: 400-284373-1
Project/Site: REFINERY 2H Semiannual

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM
Project/Site: REFINERY 2H Semiannual

Job ID: 400-284373-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET PEN
8270E	Semivolatile Organic Compounds (GC-MS/MS)	SW846	EET PEN
6010D	Metals (ICP)	SW846	EET CHI
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	EET CHI
3511	Microextraction of Organic Compounds	SW846	EET PEN
5030C	Purge and Trap	SW846	EET PEN

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6°C, 0.0°C IR-11
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.	X			
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			

Laboratory Blank	Target analytes were not detected in the laboratory blank.		X		

Blank ID	Parameter	Analyte	Concentration/Amount
MB 400-727811/1-A	SVOCs	Phenol	1.22 µg/L

Qualifications due to blank contamination are included in the table below. Analytical data that were reported for non-detect, or at concentrations greater than five times (5X) the associated blank concentration.

Sample ID	Parameter	Analyte	New Reporting Limit (RL)	Qualification
P83B-WRR-102025	SVOCs	Phenol	-	**U**
P83D-WRR-102025	SVOCs	Phenol	-	**U**
P94-WRR-102025	SVOCs	Phenol	-	**U**

Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.		X		

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method	X			
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-284493-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/21/2025 9:55 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 0.4°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The method blank for preparation batch 400-727811 and analytical batch 400-728176 contained Phenol above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: AECOM
Job ID: 400-284493-1
Project/Site: REFINERY 2H Semiannual

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM
Project/Site: REFINERY 2H Semiannual

Job ID: 400-284493-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET PEN
8270E	Semivolatile Organic Compounds (GC-MS/MS)	SW846	EET PEN
6010D	Metals (ICP)	SW846	EET CHI
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	EET CHI
3511	Microextraction of Organic Compounds	SW846	EET PEN
5030C	Purge and Trap	SW846	EET PEN

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.4°C, 0.0°C IR-10
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Stage 2A Validation

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			The cooler receipt form did not indicate any problems.
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			
Matrix Spike	MS recoveries met acceptance criteria.	X			
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.	X			
Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.		X		

Blank ID	Parameter	Analyte	Concentration/Amount
MB 400-727811/1-A	SVOCs	Phenol	1.22 µg/L

Analytical data that were reported for non-detect, or at concentrations greater than five times (5X) the associated blank concentration.

Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			The samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			The laboratory report was revised on December 15, 2025, to include inadvertently omitted QC.
Usability	No results qualified as unusable.	X			

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	acceptance range of 90-110% as applicable to the method				
Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated, and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples)			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method				

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Job Narrative
400-284499-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Revision
Report revised to correct QC linking. Supersedes report dated 11-4-2025.

Receipt
The samples were received on 10/21/2025 9:55 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 0.4°C.

GC/MS VOA
Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: P93A-WRR-102025 (400-284499-3). Elevated reporting limits (RLs) are provided.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: P93B-WRR-102025 (400-284499-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_QQQ: The method blank for preparation batch 400-727811 and analytical batch 400-728176 contained Phenol above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8270E_QQQ: The following samples were diluted to bring the concentration of target analytes within the calibration range: P93A-WRR-102025 (400-284499-3) and P93B-WRR-102025 (400-284499-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: AECOM
Job ID: 400-284499-1
Project/Site: REFINERY 2H Semiannual

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method Summary

Client: AECOM

Stage 2A Validation

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.		X		

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
MW12-ROX-070725	SVOCs	Phenol-d_5	6	10-150

Qualifications due to surrogate recoveries were not required if only one of three base/neutral and/or acid surrogate recoveries were outside evaluation criteria.

Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	

Matrix Spike	MS recoveries met acceptance criteria.		X		

MS/MSD ID	Parameter	Analyte	MS/MSD Recovery (%)	RPD	MS/MSD/ RPD Criteria
MW16-ROX-070725 MS/MSD	VOCs	Acetone	**41/42**	0	43-150/30
MW16-ROX-070725 MS/MSD	VOCs	2-Chloroethyl vinyl ether	10/**0**	NC	10-150/50
MW10-ROX-070725 MS/MSD	VOCs	Acetone	43/**42**	1	43-150/30
MW10-ROX-070725 MS/MSD	VOCs	2-Chloroethyl vinyl ether	**0/0**	NC	10-150/50
MW16-ROX-070725 MS/MSD	SVOCs	Phenol	**151/155**	3	50-150/40
MW16-ROX-070725 MS/MSD	SVOCs	Pyridine	**195/199**	2	50-150/40
MW10-ROX-070725 MS/MSD	SVOCs	3 & 4 Methylphenol	146/**156**	6	50-150/40
MW10-ROX-070725 MS/MSD	SVOCs	Phenol	**159/157**	1	50-150/40
MW10-ROX-070725 MS/MSD	SVOCs	Pyridine	**192/199**	3	50-150/40
MW10-ROX-070725 MS/MSD	PAHs	Pyrene	127/**160**	23	50-150/40

Analytical data that required qualification based on MS/MSD data are referenced below. Analytical data reported as non-detect and associated with MS/MSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Method 8260D (VOCs)
Professional judgement was used to qualify; however, not reject 2-chloroethyl vinyl ether due to the acid reactive nature of 2-chloroethyl vinyl ether.

Analytical data that required qualification based on MS/MSD data are included in the table below.

Sample ID	Parameter	Analyte	Qualification
MW16-ROX-070725	VOCs	2-Chloroethyl vinyl ether	**UJ**
MW16-ROX-070725	VOCs	Acetone	**UJ**
MW10-ROX-070725	VOCs	2-Chloroethyl vinyl ether	**UJ**
MW10-ROX-070725	VOCs	Acetone	**UJ**

Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.		X		

LCS/LCSD ID	Parameter	Analyte	LCS/LCSD Recovery	RPD	LCS/LCSD/RPD Criteria
LCS 400-715402/2-A	PAHs	Pyrene	**130**	NA	30-126
LCS 400-715402/2-A	SVOCs	Phenol	**152**	NA	10-150

LCS 400-715402/2-A	SVOCs	Pyridine	**187**	NA	10-150

Analytical data reported as non-detect and associated with LCS/LCSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			Samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.		X		The laboratory report was revised on May 19, 2025, to correct sample identifications.
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	

Method 8260D (VOCs)

The initial calibration verification (ICV) for chloroethane and continuing calibration verifications (CCV) for several analytes were outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW11-ROX-070725	VOCs	Acrylonitrile	UJ

Method 8270E (SVOCs)

The initial calibration verifications (ICV) for pyridine was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW11-ROX-070725	SVOCs	Pyridine	UJ
MW16-ROX-070725	SVOCs	Pyridine	UJ
MW12-ROX-070725	SVOCs	Pyridine	UJ
MW9-ROX-070725	SVOCs	Pyridine	UJ
MW10-ROX-070725	SVOCs	Pyridine	UJ
MW28-ROX-070725	SVOCs	Pyridine	UJ
MW27-ROX-070725	SVOCs	Pyridine	UJ

Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

JOB DESCRIPTION

ROXANA QUARTERLY GW

JOB NUMBER

400-278794-1

Reviewed 8/27/2025
AV

Eurofins Pensacola
3355 McLemore Drive
Pensacola FL 32514

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Job Narrative
400-278794-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Revision
Report revised to correct sample IDs. Supersedes report dated 7-22-2025.

Receipt
The samples were received on 7/8/2025 9:18 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.5°C and 3.3°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-715694 recovered outside acceptance criteria, low biased, for Acrolein, Acrylonitrile, Bromoform, Chloroethane, Chloromethane, Dibromochloromethane, Hexachlorobutadiene, Trichlorofluoromethane and Vinyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-070725-8260-A (400-278794-1), MW11-ROX-070725-EB (400-278794-3), MW11-ROX-070725 (400-278794-4), MW12-ROX-070725 (400-278794-6), TB-ROX-070725-8260-B (400-278794-7), MW9-ROX-070725-EB (400-278794-9), MW9-ROX-070725 (400-278794-10) and MW28-ROX-070725 (400-278794-12). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-713963 was outside method criteria for the following analyte(s): Chloroethane and Hexachlorobutadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-715867 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-715867 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-715867 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-715867 recovered outside acceptance criteria, low biased, for 1,1,1,2-Tetrachloroethane, Acrolein, Acrylonitrile, Bromoform, Dibromochloromethane and Chloroethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: MW16-ROX-070725 (400-278794-5), MW10-ROX-070725 (400-278794-11) and MW27-ROX-070725 (400-278794-13). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA

Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-715567 recovered above the upper control limit for Anthracene, Benzo[a]anthracene, Chrysene, Fluoranthene, Phenanthrene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_LL_QQQ: The laboratory control sample (LCS) for preparation batch 400-715402 and analytical batch 400-715567 recovered outside control limits for the following analytes: Pyrene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_LL_QQQ: The matrix spike duplicate (MSD) recoveries for preparation batch 400-715402 and analytical batch 400-715567 were outside control limits. Sample matrix interference is suspected.

Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-715728 recovered above the upper control limit for Benzo[a]anthracene, Chrysene, Fluoranthene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Pyridine. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-715568 recovered above the upper control limit for 2,4-Dimethylphenol, 2-Methylphenol, 3 & 4 Methylphenol, Aniline, Butyl benzyl phthalate, Dibenzofuran, Dimethyl phthalate and Phenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The laboratory control sample (LCS) for preparation batch 400-715402 and analytical batch 400-715568 recovered outside control limits for the following analytes: Phenol and Pyridine. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: MW12-ROX-070725 (400-278794-6). These results have been reported and qualified.

Method 8270E_QQQ: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-715402 and analytical batch 400-715568 were outside control limits. Sample matrix interference is suspected.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-715729 recovered above the upper control limit for 2,4-Dimethylphenol, Aniline, Butyl benzyl phthalate, Dibenzofuran, Dimethyl phthalate and Phenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Benzoic acid. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Sample Summary

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Surrogate Summary

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.5°C, 3.3°C IR10
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Laboratory Report Reviewed: 400-278870-1

Site Name: Roxana

Prepared By and Date: Andrei Niculau 8/27/2025

Event Reviewed: 3rd Quarter 2025 Data Review

Reviewed By and Date: Delaine Austin 9/02/2025

Stage 2A Validation

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	
Matrix Spike	MS recoveries met acceptance criteria.			X	
Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.		X		

LCS/LCSD ID	Parameter	Analyte	LCS/LCSD Recovery	RPD	LCS/LCSD/RPD Criteria
LCS 400-715522/2-A LCSD 400-715522/3-A	SVOCs	Pyridine	**171/181**	6	10-150/40

Analytical data that required qualification based on LCS/LCSD data are referenced below. Analytical data reported as non-detect and associated with LCS/LCSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Analytical data associated with LCS/LCSD RPD alone outside evaluation criteria did not require qualification.

Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			Samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.	X			

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics**		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
	The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method				

Method 8260D (VOCs)

The initial calibration verification (ICV) for chloroethane and continuing calibration verifications (CCV) for several analytes were outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table..

Sample ID	Parameter	Analyte	Qualification
MW23-ROX-070825	VOCs	Acrylonitrile	UJ
MW23-ROX-070825	VOCs	Bromoform	UJ
MW23-ROX-070825	VOCs	Hexachlorobutadiene	UJ
MW23-ROX-070825	VOCs	Chloroethane	UJ
MW23-ROX-070825	VOCs	Trichlorofluoromethane	UJ
MW23-ROX-070825	VOCs	Acrolein	UJ
MW23-ROX-070825	VOCs	Vinyl Acetate	UJ

Method 8270E (SVOCs)

The initial calibration verifications (ICV) for pyridine was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW23-ROX-070825	SVOCs	Pyridine	UJ

Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-278870-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/9/2025 9:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 0.2°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-715694 recovered outside acceptance criteria, low biased, for Acrolein, Acrylonitrile, Bromoform, Chloroethane, Chloromethane, Dibromochloromethane, Hexachlorobutadiene, Trichlorofluoromethane and Vinyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-070825-8260-BP (400-278870-1) and MW23-ROX-070825 (400-278870-3). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-713963 was outside method criteria for the following analyte(s): Chloroethane and Hexachlorobutadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-715728 recovered above the upper control limit for Benzo[a]anthracene, Chrysene, Fluoranthene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Pyridine. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-715729 recovered above the upper control limit for 2,4-Dimethylphenol, Aniline, Butyl benzyl phthalate, Dibenzofuran, Dimethyl phthalate and Phenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-715522 and analytical batch 400-715729 recovered outside control limits for the following analytes: Pyridine. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Benzoic acid. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Project/Site: ROXANA QUARTERLY GW

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Surrogate Summary

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.2°C, 0.0°C IR10
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Event Reviewed: 3rd Quarter 2025 Data Review

Reviewed By and Date: Delaine Austin 09/02/2025

Stage 2A Validation

Item Reviewed	Acceptable Criteria	Quality Condition			Comments
		Pass	Fail[1]	N/A	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.		X		

Sample ID	Parameter	Surrogate	Recovery (%)	Criteria (%)
MW3-ROX-070825	SVOCs	Nitrobenzene-d_5	42	50-150
MW5-ROX-070825	SVOCs	Nitrobenzene-d_5	41	50-150

Qualifications due to surrogate recoveries were not required if only one of three base/neutral and/or acid surrogate recoveries were outside evaluation criteria.

Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.			X	

Matrix Spike	MS recoveries met acceptance criteria.		X		

MS/MSD ID	Parameter	Analyte	MS/MSD Recovery (%)	RPD	MS/MSD/ RPD Criteria
MW6B-ROX-070825 MS/MSD	VOCs	2-Chloroethyl vinyl ether	**0/0**	NC	10-150/50
MW6B-ROX-070825 MS/MSD	SVOCs	Pyridine	**178/185**	3	10-150/40

Analytical data that required qualification based on MS/MSD data are referenced below. Analytical data reported as non-detect and associated with MS/MSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Method 8260D (VOCs)
Professional judgement was used to qualify; however, not reject 2-chloroethyl vinyl ether due to the acid reactive nature of 2-chloroethyl vinyl ether.

Analytical data that required qualification based on MS/MSD data are included in the table below.

Sample ID	Parameter	Analyte	Qualification
MW6B-ROX-070825	VOCs	2-Chloroethyl vinyl ether	**UJ**

Laboratory Control Spike	LCS was performed at the required frequency and LCS recoveries met acceptance criteria.		X		

LCS/LCSD ID	Parameter	Analyte	LCS/LCSD Recovery	RPD	LCS/LCSD/RPD Criteria
LCS 400-715522/2-A LCSD 400-715522/3-A	SVOCs	Pyridine	**171/181**	6	10-150/40

Analytical data reported as non-detect and associated with LCS/LCSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			Samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			

Historical	Sample results were within 3 standard deviations from historical mean.		X		

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Method 8270E (SVOCs)

The initial calibration verification (ICV) for pyridine was outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
P54-ROX-070825	SVOCs	Pyridine	**UJ**
MW1-ROX-070825	SVOCs	Pyridine	**UJ**
MW26-ROX-070825	SVOCs	Pyridine	**UJ**
MW6A-ROX-070825	SVOCs	Pyridine	**UJ**
MW6B-ROX-070825	SVOCs	Pyridine	**UJ**
MW3-ROX-070825	SVOCs	Pyridine	**UJ**
MW5-ROX-070825	SVOCs	Pyridine	**UJ**
ROST3MW-ROX-070825	SVOCs	Pyridine	**UJ**

Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			

Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-278871-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/9/2025 9:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.0°C and 0.2°C.

Receipt Exceptions
The container label for the following sample(s) did not match the information listed on the Chain-of-Custody (COC). The container labels list MW-25, while the COC lists MW-26. Time matched and all other samples accounted for.

GC/MS VOA
Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-070825-8260-A (400-278871-1), P54-ROX-070825 (400-278871-3), MW1-ROX-070825 (400-278871-4), MW26-ROX-070825 (400-278871-5), MW6A-ROX-070825 (400-278871-6), MW6B-ROX-070825 (400-278871-7), TB-ROX-070825-8260-B (400-278871-8), MW3-ROX-070825 (400-278871-10), MW5-ROX-070825 (400-278871-11) and ROST3MW-ROX-070825 (400-278871-12). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-715845 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-715845 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-715728 recovered above the upper control limit for Benzo[a]anthracene, Chrysene, Fluoranthene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-715880 recovered above the upper control limit for Anthracene, Benzo[a]anthracene, Chrysene, Fluoranthene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_LL_QQQ: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: MW3-ROX-070825 (400-278871-10) and MW5-ROX-070825 (400-278871-11). These results have been reported and qualified.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Pyridine. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-715729 recovered above the upper control limit for 2,4-Dimethylphenol, Aniline, Butyl benzyl phthalate, Dibenzofuran, Dimethyl phthalate and Phenol. The samples

associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-715522 and analytical batch 400-715729 recovered outside control limits for the following analytes: Pyridine. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-715522 and analytical batch 400-715729 were outside control limits. Sample matrix interference is suspected.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-715881 recovered above the upper control limit for 2,4-Dimethylphenol, Aniline, Butyl benzyl phthalate, Dibenzofuran, Dimethyl phthalate and Phenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Benzoic acid. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Surrogate Legend

FBP = 2-Fluorobiphenyl
NBZ = Nitrobenzene-d5
TPHL = Terphenyl-d14
2FP = 2-Fluorophenol
PHL = Phenol-d5
TBP = 2,4,6-Tribromophenol

Method Summary

Client: AECOM
Project/Site: ROXANA QUARTERLY GW

Job ID: 400-278871-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET PEN
8260D SIM	Volatile Organic Compounds (GC/MS)	SW846	EET PEN
8270E	Semivolatile Organic Compounds (GC-MS/MS)	SW846	EET PEN
3511	Microextraction of Organic Compounds	SW846	EET PEN
5030C	Purge and Trap	SW846	EET PEN

Protocol References:

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Login Sample Receipt Checklist

Client: AECOM

Job Number: 400-278871-1

Login Number: 278871
List Number: 1
Creator: Beecher (Roberts), Alexis J

List Source: Eurofins Pensacola

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.2°C, 0.0°C IR10
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Stage 2A Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Chain of Custody and Sample Receipt	Samples received in good condition, consistent with the COC, and within the required temperature range.	X			
The cooler receipt form did not indicate any problems. Three of 70 (2-chloroethyl vinyl ether, acrolein, and acrylonitrile) 8260 VOCs are acid-reactive compounds; results may be biased low due to the presence of HCl in the preservative.					
Holding Times	Analyses were performed within holding time.	X			
Surrogate	Surrogate recoveries met acceptance criteria.	X			
Field/Laboratory Duplicate	Laboratory duplicates met laboratory control limits, and field duplicates met the applicable criteria.	X			

Matrix Spike	MS recoveries met acceptance criteria.		X

Analytical data that required qualification based on MS/MSD data are included in the table below. Analytical data reported as non-detect and associated with MS/MSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

The MS/MSD RPD for all analytes, with the exception of bromomethane and chloroethane, were above the evaluation criteria. Analytical data associated with MS/MSD RPD alone outside evaluation criteria did not require qualification.

Sample ID	Parameter	Analyte	Qualification
MW6C-ROX-070925	VOCs	2-Chloroethyl vinyl ether	UJ
MW6C-ROX-070925	VOCs	Acetone	UJ
MW6C-ROX-070925	VOCs	2-Butanone (MEK)	UJ
MW6C-ROX-070925	VOCs	2-Hexanone	UJ

Laboratory Control Spike	LCS was performed at the required frequency and		X		

	LCS recoveries met acceptance criteria.				

LCS/LCSD ID	Parameter	Analyte	LCS/LCSD Recovery	RPD	LCS/LCSD/RPD Criteria
LCS 400-715763/2-A LCSD 400-715763/3-A	SVOCs	Aniline	**171/164**	4	10-134/40

Analytical data that required qualification based on LCS/LCSD data are referenced below. Analytical data reported as non-detect and associated with LCS/LCSD recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. Analytical data associated with LCS/LCSD RPD alone outside evaluation criteria did not require qualification.

Method 8270E (SVOCs)

Sample ID	Parameter	Analyte	Qualification
ROST4PZC-ROX-070925-DUP	SVOCs	Dibenzofuran	**J**

Trip/Field/Equipment Blank	Target analytes were not detected in the trip/field/equipment blank.	X			
Laboratory Blank	Target analytes were not detected in the laboratory blank.	X			
Detection Limits[2]	No results were reported as non-detect at elevated detection limits.	X			Samples analyzed did not require dilution.
Reporting/Other	No other quality issues were noted that would impact the usability of this data set.	X			
Usability	No results qualified as unusable.	X			
Historical	Sample results were within 3 standard deviations from historical mean.		X		

Stage 2B, 3, 4 Validation					
Item Reviewed	**Acceptable Criteria**	**Quality Condition**			**Comments**
		Pass	**Fail[1]**	**N/A**	
Initial Calibration	The initial calibration met the criteria outlined in the associated method. This includes, but is not limited to: • Meeting the minimum standards for average, linear, and non-linear regression • Acceptable relative standard deviation • Acceptable correlation coefficient/correlation criteria			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Tuning/Instrument Performance Checks	A satisfactory tuning event was conducted at the beginning of every 12 hours of sample analysis, or the specified frequency per method, and ion relative abundances were within acceptance limits.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

Initial Calibration Verification/Continuing Calibration Verification	ICVs/CCVs were analyzed for each analytes at the specified frequency and appropriate concentrations. **Organics** The associated percent difference (%D) was within method criteria. **Inorganics** The ICV and CCV were recovered within the method low-level acceptance range of 70-130% and the medium/high acceptance range of 90-110% as applicable to the method		X		Analytical data reported as non-detect and associated with ICV/CCV %D recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Method 8260D (VOCs)

The initial calibration verification (ICV) for chloroethane and continuing calibration verifications (CCV) for several analytes were outside evaluation criteria, biased low. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
MW6C-ROX-070925	VOCs	Chloromethane	UJ
MW13-ROX-070925	VOCs	Chloromethane	UJ
P114R-ROX-070925	VOCs	Chloromethane	UJ
ROST4PZE-ROX-070925	VOCs	Chloromethane	UJ
ROST4PZC-ROX-070925	VOCs	Chloromethane	UJ
ROST4PZC-ROX-070925-DUP	VOCs	Chloromethane	UJ
ROST4PZG-ROX-070925	VOCs	Chloromethane	UJ
MW6C-ROX-070925	VOCs	Trichlorofluoromethane	UJ
MW6D-ROX-070925	VOCs	Trichlorofluoromethane	UJ
MW13-ROX-070925	VOCs	Trichlorofluoromethane	UJ
P114R-ROX-070925	VOCs	Trichlorofluoromethane	UJ
ROST4PZE-ROX-070925	VOCs	Trichlorofluoromethane	UJ
ROST4PZC-ROX-070925	VOCs	Trichlorofluoromethane	UJ
ROST4PZC-ROX-070925-DUP	VOCs	Trichlorofluoromethane	UJ
ROST4PZG-ROX-070925	VOCs	Trichlorofluoromethane	UJ

Method 8270E (SVOCs)

The continuing calibration verifications (CCV) for several analytes, were outside evaluation criteria, biased low. The continuing calibration verifications (CCV) for anthracene, was outside evaluation criteria, biased high. Analytes are qualified as summarized in the following table.

Sample ID	Parameter	Analyte	Qualification
ROST4PZC-ROX-070925	PAHs	Anthracene	J
ROST4PZC-ROX-070925-DUP	PAHs	Anthracene	J
MW6C-ROX-070925	SVOCs	Pyridine	UJ
MW6D-ROX-070925	SVOCs	Pyridine	UJ
MW13-ROX-070925	SVOCs	Pyridine	UJ
P114R-ROX-070925	SVOCs	Pyridine	UJ
ROST4PZE-ROX-070925	SVOCs	Pyridine	UJ
ROST4PZC-ROX-070925	SVOCs	Pyridine	UJ

Initial and Continuing Calibration Blanks	ICBs/CCBs were analyzed at the specified frequency and no target analytes were present.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Interference Check Standard (Metals Only)	The interference check standard (ICS) AB solutions were analyzed at the proper frequency. The target analytes were recovered within the acceptance range of 85-115% in the ICS AB solution. Interferent elements were not present in the samples at concentrations greater than those in the ICSs.			X	
Internal Standards	The recoveries for the internal standards in field samples were within the applicable acceptance limits.	X			
Second Column/Detector Confirmation Results	The reported results agreed with an RPD ≤40% between the primary and confirmation columns.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Recalculation/Re-quantification	10% of selected samples, batch QC, instrument QC, and the initial calibration were recalculated and appropriate instrument response data was reviewed.			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.
Target Compound Identification	The instrument printouts were reviewed. Results obtained for quality control check samples (calibration standards and			X	Evaluation not required for Stage 2A + IS/ICV/CCV hybrid validation.

	laboratory control samples) indicate that instrument signals reported were due to the target analytes. Reported signal intensities and mass spectral data agreed with reported concentrations for all samples and agree with the criteria in the analytical method				

[1] A failed condition must be elevated to the PM and project chemist for resolution.
[2] Non-detect results reported at elevated detection limits should be evaluated by the end user of the data with respect to project objectives.

Data is reviewed electronically and confirmed against the PDF. Criteria is evaluated against the most current version of National Functional Guidelines, method requirements, and the project Quality Assurance Project Plan, as applicable.

Job Narrative
400-278969-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/10/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.6°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-715908 recovered outside acceptance criteria, low biased, for Chloromethane and Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: TB-ROX-070925-8260-A (400-278969-1), MW6C-ROX-070925 (400-278969-3), MW6D-ROX-070925 (400-278969-4), MW13-ROX-070925 (400-278969-5), P114R-ROX-070925 (400-278969-6), TB-ROX-070925-8260-B (400-278969-7), ROST4PZE-ROX-070925 (400-278969-9), ROST4PZC-ROX-070925 (400-278969-10), ROST4PZC-ROX-070925-DUP (400-278969-11) and ROST4PZG-ROX-070925 (400-278969-12). The requested target analyte list includes 2-Chloroethyl vinyl ether, Acrolein and Acrylonitrile, which are acid-labile compounds that degrades in an acidic medium.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-715908 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 400-715908 was outside control limits. Sample matrix interference is suspected.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-715908 were outside control limits for 2-Chloroethyl vinyl ether due to the acidic nature of the parent sample.

Method 8260D: The RPD for the MS/MSD for 2-chloroethyl vinyl ether was not calculable for analytical batch 400-715908 because the recoveries were below the reporting limit due to the acidic nature of the parent sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-715728 recovered above the upper control limit for Benzo[a]anthracene, Chrysene, Fluoranthene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-715880 recovered above the upper control limit for Anthracene, Benzo[a]anthracene, Chrysene, Fluoranthene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_LL_QQQ: The continuing calibration verification (CCV) associated with batch 400-716008 recovered above the upper control limit for Anthracene, Benzo[a]anthracene, Chrysene, Fluoranthene, Phenanthrene and Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Job ID: 400-278969-1 (Continued) Eurofins Pensacola

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Pyridine. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-715729 recovered above the upper control limit for 2,4-Dimethylphenol, Aniline, Butyl benzyl phthalate, Dibenzofuran, Dimethyl phthalate and Phenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-715881 recovered above the upper control limit for 2,4-Dimethylphenol, Aniline, Butyl benzyl phthalate, Dibenzofuran, Dimethyl phthalate and Phenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The laboratory control sample (LCS) for preparation batch 400-715763 and analytical batch 400-715729 recovered outside control limits for the following analytes: Aniline, Bis(2-chloroethoxy)methane, Dibenz[a,h]acridine, Dibenzofuran, Pyridine and Quinoline. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: The laboratory control sample duplicate (LCSD) for preparation batch 400-715763 and analytical batch 400-715729 recovered outside control limits for the following analytes: Aniline, Dibenz[a,h]acridine, Dibenzofuran and Pyridine. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E_QQQ: Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (LCSD 400-715763/3-A). These results have been reported and qualified.

Method 8270E_QQQ: The continuing calibration verification (CCV) associated with batch 400-716009 recovered above the upper control limit for Aniline, Benzyl alcohol, Butyl benzyl phthalate, Dibenzofuran, 2,4-Dimethylphenol, Dimethyl phthalate and Phenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_QQQ: The initial calibration verification (ICV) analyzed in batch 400-708511 was outside method criteria for the following analyte(s): Benzoic acid. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: AECOM
Project/Site: ROXANA QUARTERLY GW

Job ID: 400-278969-1

Client Sample ID: TB-ROX-070925-8260-A — Lab Sample ID: 400-278969-1

No Detections.

Client Sample ID: TB-ROX-070925-8260SIM-A — Lab Sample ID: 400-278969-2

No Detections.

Client Sample ID: MW6C-ROX-070925 — Lab Sample ID: 400-278969-3

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
4-Chloroaniline	0.49	J	9.3	0.26	ug/L	1		8270E	Total/NA

Client Sample ID: MW6D-ROX-070925 — Lab Sample ID: 400-278969-4

No Detections.

Client Sample ID: MW13-ROX-070925 — Lab Sample ID: 400-278969-5

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Methyl tert-butyl ether	0.54	J	1.0	0.22	ug/L	1		8260D	Total/NA

Client Sample ID: P114R-ROX-070925 — Lab Sample ID: 400-278969-6

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Methyl tert-butyl ether	0.57	J	1.0	0.22	ug/L	1		8260D	Total/NA
4-Chloro-3-methylphenol	0.77	J	9.9	0.72	ug/L	1		8270E	Total/NA

Client Sample ID: TB-ROX-070925-8260-B — Lab Sample ID: 400-278969-7

No Detections.

Client Sample ID: TB-ROX-070925-8260SIM-B — Lab Sample ID: 400-278969-8

No Detections.

Client Sample ID: ROST4PZE-ROX-070925 — Lab Sample ID: 400-278969-9

No Detections.

Client Sample ID: ROST4PZC-ROX-070925 — Lab Sample ID: 400-278969-10

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Benzene	1.1		1.0	0.50	ug/L	1		8260D	Total/NA
2-Butanone (MEK)	7.7	J	25	2.6	ug/L	1		8260D	Total/NA
Carbon disulfide	0.53	J	1.0	0.50	ug/L	1		8260D	Total/NA
Isopropylbenzene	4.1		1.0	0.53	ug/L	1		8260D	Total/NA
m-Xylene & p-Xylene	28		5.0	3.0	ug/L	1		8260D	Total/NA
Naphthalene	69		5.0	3.0	ug/L	1		8260D	Total/NA
N-Propylbenzene	5.2		1.0	0.69	ug/L	1		8260D	Total/NA
Toluene	8.7		1.0	0.90	ug/L	1		8260D	Total/NA
1,2,4-Trimethylbenzene	4.5		1.0	0.82	ug/L	1		8260D	Total/NA
1,3,5-Trimethylbenzene	2.2		1.0	0.56	ug/L	1		8260D	Total/NA
Xylenes, Total	30		10	6.0	ug/L	1		8260D	Total/NA
Acenaphthene	0.96		0.20	0.085	ug/L	1		8270E	Total/NA
Acenaphthylene	0.095	J	0.20	0.047	ug/L	1		8270E	Total/NA
Anthracene	0.21		0.20	0.073	ug/L	1		8270E	Total/NA
Fluorene	0.61		0.20	0.087	ug/L	1		8270E	Total/NA
1-Methylnaphthalene	24		0.20	0.066	ug/L	1		8270E	Total/NA
2-Methylnaphthalene	11		0.20	0.077	ug/L	1		8270E	Total/NA

This Detection Summary does not include radiochemical test results.
